VIPER 68030

The running Viper 680 board is a feature packed accelerator card which not only has the equivalent capabilities of 680 boards it's a fraction of the cost.

The Viper will give an amazing 400% overall speed improvement over your Amiga 1200, making it even faster than an Amiga 4000/1200! Some operations have speed increases in excess of fifteen times.

Some floating point operations are an incredible thirty seven times quicker, faster than an Amiga 4000/1200!

Viper Features

- FPU with MMU running at 28MHz
- FPU running up to 30MHz
- Industry standard 72 pin SIMMs
- RAM, upgradable to 128MB using 1, 2, 4, 8, 16, 32, 64 or 128MB SIMMs
- On-board battery backed clock
- Oscilloscopic SCSI-II interface
- Flo disk buffer remapping (FASTROM option)
- 640x128 maths co-processor (20MHz)
- Faster than an Amiga 4000/1200
- Supports instruction + data bus modes 50% cheaper than the competition

POWERPC SHAREWARE

Please enquire for software prices.

MEGAHITMAP

Increase your Amiga 500/1200 chip RAM to a total of 7MB. MegaHitmap does this by using up to 1MB of RAM and drawing extra memory from any other RAM you have installed in your Amiga. No soldering is required.

MegaClip RAM £159

MEMORY EXPANSION

We manufacture a vast range of memory cards for the Amiga 500, 500+, 600, 1200, 1500, 2000, 3000 and 4000. Please telephone us for prices and availability.

EMPLAKEY MAC EMULATOR

The Macintosh emulator board boasts so many features to hot all of them, for further details please contact Power. Some of the features include full colour support, menu based, hard drive support Mac 500 and Mac II, 1.44MB support, AppleTalk, SCSI devices, printers, scanners and CD-ROM etc.

Basic £299.95

Basic + AppleTalk £349.95

Basic + SCSI Interface £349.95

Basic + AppleTalk/SCSI Interface £399.95

SCSI 2

SCSI 2 adaptor £79

DKB 3128

Up to 128MB of RAM on your Amiga 3000/4000 using 4x16 and 32MB Strem modules. This is true Zorro III 32-bit memory board.

DKB 3128 0MB RAM £279

DKB 1000 SCSI-2

SCSI-2 board for the Amiga 2000 including memory expansion capabilities of up to 8MB.

Octagon SCSI-2 £129

DKB 4091

The DKB 4091 (listened by Commodore) SCSI Host Adapter is a high performance board that connects up to seven SCSI devices to your Amiga. The DKB 4091 features Full Zorro III implementation, fast SCSI-2 implementation, SCSI internal connector and ribbon cable, high density SCSI-2 external connector, direct memory access (DMA) and hardware to install a 3.5" hard drive on the board.

DKB 4091 £299

VIDEO BACKUP

Use a VCR as a backup storage device. Two hundred Amiga floppy disks fit on to a 4-HR tape which can be used for an alternative hard disk backup system. What's more you can now watch television on your 1050+ machine. A Scan or Mono version is available.

Video Backup Scan £65

Video Backup Photo £60

XL DRIVE

The XL Drive can be used with any Amiga Computer, and allows you to write a massive 1.7GB on a high density floppy diskette. The drive can also act as a standard 80K drive and can read and write disks written on an A4000 Internal high density drive. XL Drive requires Kickstart 2 or above.

| | |
|--------------------------------------|---------------|
| XL Drive external | £99.95 |
| XL Drive internal (all Amiga*) | £79.95 |
| XL Drive internal A4000 | £89.95 |

POWER DRIVE

The new Power Drive is the most inexpensive disk drive of its kind at the market. The drive includes a strong aluminum case, an anti-clock device, virus blocker, Cyclone compatible chip and the latest built-in backup hardware which allows X-Copy to copy and verify

| | |
|----------------------------------|---------------|
| Power Drive | £99 |
| Cyclone & Blits Software | £15 |
| Power Drive 1.76MB Upgrade. | £49.95 |

AMIGO PRINTER

Now you can produce amazing high quality print out paper transparency films etc etc just put one transparency film at a time. Share transfer from your Amiga. The printer uses printer, recent recipient of countless awards in the field. PC and Macintosh markets like us the printer compares to any Amiga. Printers uses thermal transfer technology a technology which is associated with much higher printout speeds. Some of the features include, software drivers for Amiga, PC and Macintosh, optional photo-transfer, upgrade kit (dye sublimation) and thermochromic colour cartridges available for test printing only.

Printer printer £949

Photo realistic upgrade kit £199

Photo realistic refill kit (£100 price) £250

Photo realistic refill kit (25 prints) £79.95

4 colour ribbon (80 prints) £39.95

Colour ribbon (15 prints) £39.95

Monochrome ribbon (400 prints) £31.95

Printers paper (A4 100 sheets) £18

Share transfer paper (A4 10 sheets) £17.95

Printers & Studio DS software £699

Digital output (use 26-bit printer driver)

INTERNAL DRIVE

We use the same drive mechanism as Commodore so thus you get the kind of resistance at a cheaper price than other external drives on the market.

| | |
|----------------------------------|------------|

COVERDISK 83

You've always wanted to make blinding music and graphics demos. Now you can with Video Tracker! Perfectly synchronised demos and videos are just a few mouse-clicks away with this fully operational demo-making package, and video users can do one better with the genlock option. Sorted!

VIDEO TRACKER

We've got three versions of Video Tracker on coverdisk 83 this month. The first is written to work specifically on 1.3 Amigas, the second is enhanced for Kickstart versions 2.04 and higher, and the third caters for A1200 and A4000 owners. See page 15 for instructions on loading the right version for your Amiga.

LOADING THE DEMO
There's a demo included on the disk to give you some idea of what Video Tracker can do. Select LOAD VIDEO, and you'll be shown a file requester with two demos. If you've got a 1Mb Amiga, select House (512K). If you have any more RAM, you can load the other demo (House) which is a little larger than the first. Once it has loaded, select PLAY to view it. Clicking the left mouse button brings you back to the control panel.

WHAT IS VIDEO TRACKER?

Good question. Video Tracker lets you create your own top notch demos and videos without any programming knowledge whatsoever! The basic theory is that you load in an OctaMED or Protracker

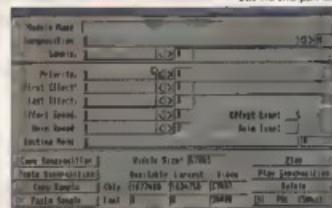

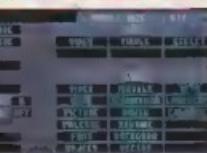

Soundtracker music module, and then build your audio visual extravaganza around the soundtrack, assigning various effects, pictures and animations to the samples in the song, resulting in a perfectly synchronised flow of sound and vision. For the more adventurous video user there's a genlock option too, so you can mix your sound and Amiga graphics with any other video source. Pretty smart, we think you'll agree.

GENERAL OPERATION

Although they look very different, the three versions of Video Tracker will work in the same way. The main differences are the layouts of the control panels. These instructions will apply to all three versions, but before we get onto them, you'll first have to get the hang of working your particular version. Look at the two pictures above. The one on top is the main control panel of the 1.3 version, and the second is the control panel of the 2.04 and AGA versions.

1.3 USERS

The 1.3 version uses a customised interface with no pull-down menus. Everything is controlled from the main panel with just the mouse. To change the values in any of the boxes, move the pointer over the number, sample name or whatever, and click the right and left mouse buttons to increase and decrease the value or scroll

minimise the risk of losing your work this way (it can be most annoying).

2.04 AND A1200 USERS

You lucky lot get a much nicer front end than the 1.3 version. All the parameters are altered with slider bars and increment/decrement buttons. All loading and saving is carried out via the pull down menus. Most of

the other options are selected from buttons on the main screen.

HOW IT WORKS

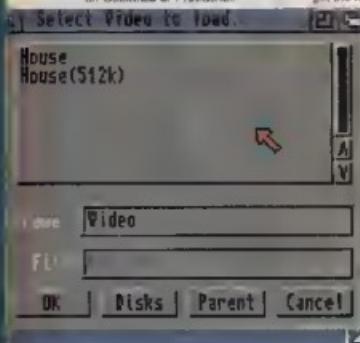

The core of any demo made with Video Tracker is the sound track. This can be a standard Protracker module or an

OctaMED module. Your module is made up of a series of 'song positions'. Each time you add a block to the song in Protracker or OctaMED, you create another of these song positions. For example, song position 0 would be the first block in the song, and song position 1 would be the following block in the song, even if you had repeated the same block twice at the start of the song.

To load a file into Video Tracker, use one of the buttons in the panel at the bottom right of the screen. If you want to load in a picture for example, click on the PICTURE button. Likewise, when you want to save a file, use the buttons beneath the SAVE box. Routine Mode can be altered just like the other parameters, but it also has + and - buttons that add or subtract in steps of 1024. This is because a routine can have up to 65,000 variations, and you probably don't fancy the idea of clicking the mouse button 65,000 times do you?

To remove the control panel and reveal the whole screen, click the small box in the top right corner of the panel. Click the left button again to bring it back. The box in the top left corner quits the program. Be very careful not to click on this accidentally, as there's no "Are You Sure?" requester — it just quits straight out, wiping your current video from memory.

NB: Save your video regularly to

sample stops playing. Look at the demo that's on the disk. Move to song position C and select sample number 29. This is an empty sample which was included in the original module as a cue-point. The Priority value is set to 1 which is the lowest priority. A sample with a Priority setting of 0 will have no visual effect.

The First Effect is set to effect number 0 which is Smile brush (he smirky face graphic in the form of an IFF brush). Last Effect is set to effect number 1, ColorGrid/Roll. This is one of Video Tracker's "routines" which is indicated by the roll extension on the filename. Routines are clever effects like plasma, starfields, picture warps and so on. In this case the two effects are shown simultaneously, because they both use compatible screen modes. The Effect Speed setting of 1 tells the program to display them both, if possible. No other effects are set for song position 0. To check, move through all the samples in the sound track, and make sure that the Priority value is set to 0 for all the other samples. The settings for sample number 29 can be completely different in each block and are not automatically carried forward into the following blocks. In other words, if you move to another song position, sample number 29 will not necessarily be set up to show the face picture and the colour background.

Move to song position 1 and go through the list of samples, keeping an eye on the Priority value to see which samples are used to trigger effects in the second block. Sample 29 now displays a screen of concentric circles, and then uses the PictureFollow routine to move it around. It is now joined by another sample called 'beep' which goes through a sequence of displaying four different screens of concentric circles. First Effect for 'beep' is set to Effect number 2, while the Last Effect is number 45. Each time the beep plays it moves one step through its sequence from effect 42 to 45. Try changing the first and last effect settings for the beep sample, then play the video to see the results.

Moving around until you've got a basic idea of how the thing works, that you can get on with making your own demos and videos.

DO IT YOURSELF

To make your own demo, you'll need either OctaMED Protracker, or a similar tracker that saves on standard modules. Video Tracker has a special player routine for OctaMED modules, so you don't need to simulate Soundtracker modules. Load your music program and write a module, preferably using small samples rather than lots of long loops. This will give you more opportunity to cue-up graphics in time with the music. Save your module to disk. If you don't have

much RAM, keep it short, as you'll need to leave room for the graphics. The other half of the demo will be your graphics. Use Deluxe Paint or a similar art package to create a few pictures and animations.

Use low resolution and fewer colours if you need to conserve RAM. Save these to disk and have them

the SONG POSITION counter to zero, and the PRIORITY value to 1. Change the First Effect setting to zero, which should also show the name of the first picture you loaded. Set

EFFECT LOOP TO ON (a tick mark on the AGA/1200 versions). Select PLAY and you should see your two pictures jumping back and forth from one to the other each time the sample plays

ADDING MORE EFFECTS

So long as the sound you've just selected doesn't play continuously throughout the first block, you should now be able to assign another effect to a different sample which should jump in between the first effect you set up. Keeping the SONG POSITION counter on zero, move to another sample that is played in the first block, and then change the First Effect setting to 2.

Load an effect from the Video Tracker disk, or from your extra Effects disk then you decompress it (see Loading instructions p 15, for details on how to make up your extra effects disk). Change the PRIORITY setting to 2. This tells Video Tracker to give this sample's graphics and effects priority over the first sample.

RATE AND ROUTINES

Some routines or effects need data files in order to work. For example, the Vector L2 rot routine is for displaying spinning vector objects, but in order for it to work, you first need to load in a vector object file.

Routines such as this will take their object file into the effect slot immediately preceding them. So, if you wanted to have a spinning vector on screen, you would load a vector object file into effect slot number 10, for example, and then load in the Vector L2 rot routine into slot 11. If you happen to have the Videotape 3D program that we gave away on the November 1992 issue of CU AMIGA now out of print and no longer available from the back issues department, you can design your own vector objects with the ROT program that was included in the disk.

Settings for samples and routines must be made for each song position. When you move to song position 1 or 2, you'll find that none of the samples are assigned to any effects. This is to give you greater freedom to keep the visuals changing from start to finish, but it also means

that if you want to repeat the pictures in a following song position, you'll need to use the copy and paste functions to duplicate them from the previous positions.

LOADING AND SAVING

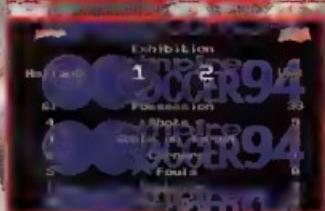

There are two ways of saving out your video. Selecting SAVE VIDEO will save out just the data for your video. In other words, it saves out the sequences that you set for all your samples and animations, but doesn't save the sounds and graphics themselves. This has the advantage of saving disk space and loading time. When it comes to loading the video back in, you'll be asked to insert any disks containing the relevant files.

SAVE VIDULE will give you an executable file, which includes all the sound and graphics data. You can then run this from a CLI or SHELL window, or make an auto-booting disk and run it from a startup-sequence script.

Before you can use the SAVE VIDULE option, you'll need to save out your video with the SAVE VIDEO option. Now select SAVE VIDULE and you'll be asked for a video to load. Insert the disk with your just-saved video, and select it from the directory listing. Your video will now be re-loaded, and you'll then be asked to select a vidule to save. Put your data disk back into the internal floppy drive, and click on DFO from the devices list. Enter a filename for your vidule (don't use any spaces or punctuation marks) and press RETURN. Your video will be saved out as an executable file. For info on how to make up an auto-booting disk with a startup sequence, consult the Amiga manual that came with your computer.

FURTHER HELP

The documentation included on the disk is very good. If there's anything that you're still unsure about, load up WinBatch and type dave > 1 Amiga, and double click the diskstatus icon. Apart from general instructions, this file gives very detailed descriptions of each of the effects and the many variations. The version of Video Tracker does not include the user to the support disk that along with registration of the disabled public domain share version.

COVERDISK 84

After Arsenal's superb win the other week, we've gone football mad in the office. This month, the super football management game *Tactical Manager* graces Coverdisk 84.

TACTICAL MANAGER

What would you say if we said we were going to give you a complete playable demo of one of the best football management games around? How would you feel if we told you there were absolutely no options disabled whatsoever. The only catch is that after 9 Premier Division Saturdays at 11 Division One Saturdays, the demo ends, regardless of any number of transfers or international challenges. We know that you'd be over the moon. That's why we've done it.

Of course when you've got a game of this size, you can't really give full and complete instructions after all, the manual is around 80 pages long! So what we'll do is take you through a brief tutorial that should outline the main points of the

game - and then you're on your own. Don't worry though, if you've played a football management sim before, you'll feel right at home with this one.

FOOTBALL CRAZY

Look at page 15 for full instructions on how to load the game. Once the game has loaded, you'll be shown the main screen, with the 'Talking Badger' logo in the middle, a menu bar along the top and news scrolling up from the bottom of the screen. Watch the news for a bit and you'll see just how much information there is in the game. To see more, click on the 'Options' menu and select 'Brief News', which will switch to 'All The News'. Now you can sit back and watch the progress of your favourite clubs.

If you want to view any teams at this point, go to the 'Action' menu and choose 'Select Club'. A screen showing the badges of all the clubs in

the currently selected division appears. Simply click on one, and you'll return to the main screen with that club's badge shown on it. To change divisions, click on the large square on the left of the screen that is showing the current division.

So you want to check out a team? Single click on the badge you've brought to the menu screen, and a small information window will appear. Click through the options on it to see what they do, and then choose the 'Select' option. A second list will appear and as you move the mouse pointer down the list of players, see how the large list of statistics on the right of the screen change. With that knowledge of the game, you should be able to check out your favourite players and see just how authentic the information is.

Still enough messing around. Once you've had a look through the menu and seen what everything does (to get back to the menu screen

at any point other than when matches are being played, click with the right mouse button), it's time to choose a team. Unfortunately, though, you can't just waltz in and play the team of your choice.

In the full game you have to earn management points before you can handle really big teams, so you'll have to go to the bottom end. Go to the 'Action' menu and select 'Managers'. A list of the current managers will appear, with Fred at the top of the list. Select Fred, and three menu options will appear. Choose 'Edit' and enter your own name, and then choose 'Join'.

A list of all the clubs in the game will appear, and you can select any with a rating of three or lower. Once you've selected one, click with the

Y

es, we've even managed to drag another game demo onto this disk. If you've read the review in this issue, then you'll already know how to play this simple but extremely addictive little Columns clone.

If you don't, then here's the basic breakdown. Blocks with symbols on them appear at the top of the screen, and you have a limited time to position them before they drop onto the see-saw below. Get them in a line in any direction to remove them, and try to keep the see-saw balanced, as the moment one of the sides touches the ground, it's game over.

I'll stack the blocks any more than four high as the see-saw drops a level under the weight, and there's no way of raising it again. Skull blocks can't be removed, so you

have to be very careful where you put them. In our demo, all you can do is head for the highest score. In the finished game there are all sorts of challenge levels to work through. Have fun now!

COVERDISK 85

Even more fantastic soccer! Play till you drop with this brilliant football game from Sierra.

SIERRA SOCCER

right mouse button and you'll be back on the main screen.

FOOTBALL MAD

Before you start moving your squad about, let's get straight into the first match of the season. Go to the 'Options' menu and make sure that the fourth item from the top reads 'Highlights'. If it doesn't, click on it a couple of times until it does. Then click on the central circle of the pitch, in the top right corner of the screen.

All the matches of the first Saturday will be played. Wait until your team appears on screen, and your match will start. Let it run for a while, and then hold down the left mouse button over your team's badge. The information window for your team will then appear, with the third and fourth lines reading 'Normal strategy' and 'Normal playing'. Now you can change the way your team plays.

Click with the left mouse button on each line to cycle through the options, and watch the difference it makes to your game. Choose 'Physical' from the fourth line, and watch how many of your players get booked! See if you can win your first match by finding the right strategy, and then return to the main menu after the game.

Take a look at the various tables and information under the 'Tables' menu, and you will already begin to

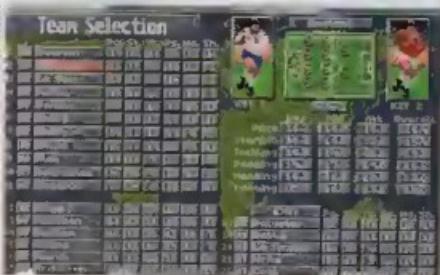

get some idea of who are the players to watch over the next few weeks. What you may find, however, is that your team isn't among them. Time to sort out your squad. Click with the left mouse button on your badge, and click on 'Select' to bring up the squad details, then you're ready to go.

To change players around in your squad, click on the first player to move, and then click on the position you want them to move to. To change a player's style (for players who can either be Midfield or Attack, denoted by M-A after their name) click on the MID, or ATT after their name. If you want to position players manually, click on the word 'Manual' at the bottom of the screen, and you'll be shown a visual layout of the team. Clicking on a shirt allows you to drag the player to their new position. Once you have the set up you're happy with, click with the right mouse button to go back to the main menu.

That should give you enough of an insight as to how to win in this game. Play around with the transfer list to improve your team, and in no time at all you should see the match results improving.

The game cuts out after eleven Division One matches, and if you aren't winning by then, all I can suggest is go back to the start and try with a better team.

Good luck!

What if football management games aren't your thing? Not to worry, CU AMIGA wouldn't want you to feel left out. Just for you we've added a third disk to this month's issue, complete with a full playable match between England and the Republic of Ireland in Sierra Soccer - the game so good you'll wonder why they ever spent so much time on adventures. One or two players can partake in this one minute each way full-on soccer explosion. Reach the end of the match it's 1-0, and it's into 20 seconds of extra time each way. Still tie at the end of that, and it's penalty shoot outs. This isn't the kind of drama that just gives you a minute and then cuts out. The only way out of this match is in victory.

The controls are remarkably simple for a game of this sort. The arrow above a player shows who you are controlling, and, as a rule this is always the one closest to the ball. To take possession of the ball, you simply need to walk up to it; unless an opposing player has it. When that

happens, you need to perform a sliding tackle, done by simply pressing the fire button.

The rest of the controls are just as easy. Pushing in a direction makes your player run that way, and pressing the line button kicks the ball in the direction the player is facing.

Aftertouch can be added by keeping the line button held down after the kick and then pressing the joystick left or right. On corner and free kicks you will see an 'arc of fire' which basically points out the direction your shot will go in. This can be moved with the joystick. On throw-ins, press and hold the fire button, then move the on-field player to the position you want him in. Releasing the fire button allows your player to throw the ball

LAST ISSUE'S AGA ONLY GAME DEMOS...

We received quite a few phone calls about two of last month's demos, Bubble and Squeak and Bounce. These demos will only work on AGA machines (with a legal as we like saying on, and it's often mentioned in the instructions) in the A1200 or A4000. Other all other machines will not be able to load and play them. This will also be true of the final versions, should you want to buy them. If you have an A500, A500+, A600, A1500 or A3000 do not worry or apologize solely as the strength of games which are marketed for AGA or A1200 only. However, as did 80 (with C64), this demo will run on disk #1 and Bounce's 'Bom' on disk #2 are all compatible with non AGA machines – so don't worry, your disks aren't faulty. Furthermore, a large proportion of new games are being programmed specifically for AGA machines, or which is for AGA only or A1200 only when purchasing full software packages or magazines. This month's demos are universally compatible with all machines.

Ooops...

We detected an error in the leading instructions for last month's last and clip art. If you have been having problems with it then try the following: Follow the previous instructions as provided, but change the line which reads '#MAKEDEF FONTS/COLOURFONT' to '#MAKEDEF FONTS/COLOURONFS' – notice the extra \$\$. This should now work. Make apologies.

HOW TO LOAD YOUR CU AMIGA COVERDISKS

LOADING DISK 83

There are three versions of *Video Tracker* included on Coverdisk 83: one for Kickstart 1.3 Amiga, another for Amiga running Kickstart 2.0+ or 2.1, and a third for A1 200 and Amiga 1200 which makes use of the expanded graphics capabilities of the A300 machines.

To do this click in the internal drive and turn the Amiga on. You will be asked if you want Kickstart 1.3. If so, do not enter Y and press return. If not, enter N and press return. If you see a hand holding a disc, when you turn on the computer without a disk in the drive, you are in a 1.3 machine.) If you enter Y for yes, the 2nd version of *Video Tracker* is loaded automatically. If you entered N for no, the disk is booted up to a Workbench screen. Double click the disk icon marked "Video Tracker" drawer icon. If you have an A1000 Plus, an A500, or any other Amiga running Kickstart 2.0+ (eg. A1200), double click the icon marked "Workbench". Video Tracker to load the program. If you have an A1200 or an A4000, double click the *Video Tracker* AGA icon.

DECOMPRESSING THE ROUTINES

Double click all the *Video Tracker* files on the disk. They will all been compressed into a single file. Before you can use these routines, they have to be decompressed onto a separate disk. If you have a hard drive, boot your Workbench program on the disk, these files will automatically be expanded and copied over for you. Follow these steps to make up your Routines disk:

- Boot your Workbench disk.
- Insert a blank disk.

DISK VIRUSES

We try to ensure that all our coverdisks are completely free of viruses. We always have the most advanced virus checkers available when the disks are produced and every program goes through rigorous testing on all relevant Amigas. However, we can not accept any responsibility for damage caused by viruses which

sequence by entering

ed /startup sequence [return]

Move down to where the lines read

*Assign >NIL etc. * enter the following and press return

Assign >nil VT:driveName

Change driveName to the name of the hard disk partition where you've

installed the *Video Tracker* program

SOUND SAMPLES

Both disks 84 and 85 contain sound samples for OctaMED and other music programs. Disk 85 has nearly 300K of samples plus a super tune. This can be loaded into OctaMED 4 or previous versions of OctaMED. It can also be loaded into OctaMED 5, but you'll need to load the samples in manually. Disk 84 also contains a few samples once again in a directory called Samples.

LOADING DISK 84

You've seen the instructions, so now you want to know how to load *Tactical*

Manager. Before you can do this you'll need two blank formatted floppy disks, as we've had to compress the data to get it to fit - this is a huge dump! I WRITE PROTECT YOUR DISK! You'll be doing a lot of disk swapping so move the small black tab in the corner of your disk up so that the hole is open. This ensures that you don't accidentally write over your coverdisk.

2 Insert Coverdisk 84 into the internal drive of your machine and switch on your Amiga.

3 When Workbench loads, double click on the C1M84 disk icon, and then double click on the Tact icon.

4 Follow the on screen instructions, swapping the coverdisk for one of your blank disks when prompted. The blank disk must be write enabled (with the hole closed). This

is your program disk.

5 Repeat steps three and four and time selecting the Tact icon and insert the other of your blank disks. This is your data disk.

6 To load *Tactical Manager* reset your machine and mount the program disk. After a while a screen will appear asking you for your data disk. Swap disks and away you go!

7 To load *Stator* switch off your machine and insert the Coverdisk 84 disk. Switch the machine on and wait for Workbench to load.

8 Double click on the C1M84 icon and again on the *Stator* icon when it appears. The program will load and run automatically.

LOADING DISK 85

Make sure disk 85 is write enabled (with the hole covered by the tab) and insert the disk

into the internal drive of your Amiga. Switch your Amiga on and wait; before you know it, you'll be shown the intro screen for *Sierra Sooper*. Make your game selections from the menu, press fire and play and enjoy!

IF YOUR DISK WON'T LOAD

If your coverdisk doesn't seem to work as it should, then follow this simple guide. Firstly, remove all unnecessary peripherals such as monitors, keyboards etc. Follow the instructions on these pages to the letter. Well, after that, you find that the disk still doesn't work, call the DiskXpress helpline on 0451 945131 between the hours of 9am and 5pm Monday to Friday. If they advise you that the disk is faulty, RTI in your details below, and send the disk along with the disk and a 25p stamp addressed envelope to the following address:

NEWS

FANCY A JOB?

If you would like a job working with our exciting Amiga application and know your stuff, this could be the job for you! Meridian Distribution (tel: 081 543 3500) one of the UK's leading software Amiga software suppliers, Meridian is looking for a dedicated and enthusiastic Amiga user to support their customers.

COMMODORE - THE FACTS!

It is been a hectic month for Commodore. Reports circulated that Commodore France had gone into receivership, then even more reports surfaced, to the effect that one of a dozen companies (ranging from the unbelievable to the very possible) would be buying them, and finally that Commodore has been liquidated! In reality of course, things were very different – but this didn't stop the rumour mongers going wild! Firstly, as part of their on-going consolidation process, Commodore France was closed. This was done because Commodore is restructuring its various operations and reducing overheads. As the operations in France were effectively being duplicated by those in other countries, Commodore closed their French arm and are now running their Gallic operations from Germany etc. Secondly, Commodore International Limited (the parent company of the UK operation) sought protection of the courts in Bahamas (where they are registered) which is similar to Chapter 11 in the USA. This does NOT mean Commodore have closed down, are in receivership or have folded. What it means is that they are continuing to trade with protection of the courts while they try sort out their financial affairs and problems, possibly by linking with another company who can bring much needed investment to their depleted vaults. It is worth noting that many companies recover from such situations – Commodore's previous on-site repair company, Wang, for instance. And throughout the process Wang continued to operate in the UK!

Thirdly, negotiations are proceeding with a potential investor. David Pleasance told CU AMIGA that there is an organisation very interested, that an announcement would be made, hopefully, in the next few weeks, and if it went ahead this buyer would be keeping the Amiga on sale and supported in Europe. One of the reasons they have sought the protection of the courts is to allow these "active discussions regarding investment and re-organisation" to be sorted out.

Mr Pleasance also told CU AMIGA that as far as he was concerned Commodore UK would continue as normal with all models of Amigas continuing to be sold and fully supported. It is also believed that Germany, Scandinavia, Italy and Canada would also still continue.

CU AMIGA spoke to many of the UK and the world's largest Amiga developers, dealers and distributors and they all remained very positive about the future. SDSL, the UK's largest supplier of Amigas to dealers, said, "We believe there is a bright future for the Amiga, no matter what, and will continue to support it and independent Amiga dealers."

In short, while Commodore's parent company are having problems at present, the future is still bright and the Amiga in whatever form is likely to continue being sold and supported.

A4000 UPGRADES

Commodore have updated the A4000 mother board, although no official announcement has been made. The changes include the 88030/40 moving from the daughter board to the main board; and the CRIM'RAM now being soldered onto the mother board.

Previously, the CPU (Central Processor Unit), the 88020 or 40, was held on a daughter board. Commodore's original plan was to introduce an expansion slot daughter board that would hold three parallel CPUs. This would give A4000

users an easy processor upgrade path. In reality, no further daughter boards have been announced, and Commodore have moved the CPU onto the motherboard, although a daughter board socket is still present.

Although no reasons were given, it is likely the change was part of Commodore's continued drive to cut costs. By isolating the CPU and CRIM'RAM on the mainboard, Commodore don't need to produce daughter boards for each A4000, thus saving them money. Commodores are on basic £7700/£8.

PHILIPS DANCES WITH ORION

Philips Media, distributors of FMV movies, have agreed to another major deal to bring further discs based on VideoCD platforms, including the C323 with its FMV module.

Philips have had up 100 items to line blockbusters such as Silence of the Lambs, Dances With Wolves, RoboCop, Mommie, Brit and Ted's Bigus Journey, Merlin to the Moon and Mississippi Burning cast on 5" CD disc.

The deal will see 10 titles released at first, and approximately 200 currently in progress to sort out where these will appear to the UK and Europe.

Hubert Garreton, Senior Vice President of Orion Home Video said, "The high quality product and with Compact Disc added is an awesome combination and we'll continue to supply this home wing of premium model."

The Orion films will soon include blockbuster films on the VideoCD format already available from Paramount and MGM/UA, such as Pulp Fiction, The Hunt for Red October, Star Trek IV, and Naked Gun Two and Half."

For further information on the new CD items van een expositie Philips op tel: 081-791 1457.

» COMMODORE CUTS PRICE OF CD32

n e surprise move
Commodore have slashed the price of the CD32 to just £249 including VAT! For this price, you will now get Microcosm, *The Chaos Engine*, Diggernaut, Oscar, Dangerous Streets and Wing Commander!

The move comes following recent announcements by Sega, which has announced a 32-bit games platform of its own. The price cut is obviously designed to preempt Sega's launch and keep Commodore ahead in the 32-bit console market - making it even more difficult for the Far Eastern console giant to compete with Commodore's new market-leading system.

The new price also makes the CD32 the lowest priced system available for watching VideoCDs. Commodore are on 0626 770085.

APOLOGIES TO...

First in Software's Prodigy Europe, in our May issue we reviewed the amazing *Final Writer*, (an elaborate scheme of a program that Ardy Leesing!) unfortunately, a routine error in us and inadvertently said that this product would only work on A1200s. It will of course run on any Amiga that has Workbench 2.9 and above, 2Mb of RAM and a hard drive.

We're also like to point out that when fully installed *Final Writer* uses no 8.3Mb of hard drive space, this being far a sensible installation. A minimum install on however will only require 2.5Mb of space.

For users who purchased early versions of *Final Writer* (prior to release 2) you can get the new version FREE, Software Prefects Europe do however require £2.95 for administration and postage. For users who purchased *Final Writer* before March 1st, there is an upgrade cost of £7.95 instead. In other words, it's worth having!

Sadly, apologies to Gordon Harwood Companions for accidentally stating that the Blizzard 1230-1 has a SCSI port built-in. It doesn't! This feature is purely optional. The Blizzard 1230-1 will have a price point of £229.95 including VAT and delivery.

Similar apologies to both companies for these mistakes.

FRONTIER 2!

David Braben is currently honing away on a sequel to *Frontier - Elite 2*, aiming for release towards the end of this year. Giving after the accompanying title of *The First Encounter*, the prequel will be a complete, stand alone game - not an episode disk as was originally intended. Using the same game engine as *Frontier*, the game is set a few hundred years before the original, and will give the player an insight into how the Federation was formed. We'll have more information very soon.

DO THE IMPOSSIBLE AGAIN!

MicroProse are about to release the follow up to that amazing 8-bit platform game, *Impossible Mission*. The game that launched a thousand others, including games like *Flashback*. Anyone who ever owned a Commodore 64 will tremble with excitement at the thought of a souped up rendition of this fabulous game, and judging by these screenshots, they are fully within their rights to get excited. The new version sticks fairly closely in content to the original, but adds things like scrolling, three different characters to play plus a pixel perfect copy of the original game, if you fancy making the comparison. We'll have a full review next issue.

POWER UP WITH A DISK DRIVE!

Power Computing are planning to release a new low cost Amiga disk drive. The new drive which should be available in June will feature anti-click technology. Power Computing invented anti-click disk drives - a mechanism which stops the disk drive constantly clicking.

At the time of going to press no drives were available but it is known that the drive will compete with many of the lower cost disk drives available, probably around £249. Power are on 0894 823000.

SEALED UP

Compuserve (UK) have introduced a new Seal of Approval for Amiga software and hardware. Compuserve claim that any product that passes their "rigorous quality control tests" will be a guarantee of quality.

David Pleasance, Compuserve UK's joint managing director, said: "We want to give users reassurance when they buy a machine. The Seal of Approval will provide that reassurance."

Several leading peripheral developers

have already applied for the Seal of Approval, with Power Computing expected to get it for their scanners, disk drives and RAM cards.

Some industry observers however question the value of the Seal of Approval, querying whether it would be worth the added cost, citing magazine awards, the CU Amiga Technical Excellence award for example, as possibly more effective.

Power Computing are on 0224 737000. Compuserve can be contacted by calling 0800 289378.

FREE SHOW TICKETS FOR SPOTLIGHT 1994

A show dedicated to the Amiga and Atari ST will be held on 26th and 29th of May, 1994, at the Novotel Hotel Hammersmith. This will be the second SPOTLIGHT show, the first was held last year and received an enthusiastic reception.

Dubbed the thinking Amiga users show it has been organised by a group of manufacturers, distributors and dealers to cater for all users. In particular, it aims to support users interested in productivity applications rather than games. There will be a range of products from third-party developers, both new and old, on display. The products will include scanners, monitors, disk drives, applications, and development tools. The show will also provide visitors with a unique opportunity to see new hardware and software, watch demonstrations of different configurations, and ask experts from the many of the leading Amiga developers any questions you may have.

CU AMIGA should be there in force alongside Powai Computing, Golden Image, Merlinian Software, Gasterline, First Computer Centre, Hispa and many more.

The doors will open at 10pm on both days; with tickets costing £5.00 on the door or £3.50 for advance bookings. To help get the show off to a good start CU AMIGA have arranged with Gasterline to give away free tickets to the first 500 CU AMIGA readers who call 081-343 5673 and ask for their free CU AMIGA ticket. If you are too late for a free ticket, call the above number and book your ticket in advance.

FASTER BBS

Global information network Compuserve has introduced high speed 14,000 baud modem links for the UK. The new modems will allow Compuserve users to access the information and files on Compuserve much faster than they previously could.

Compuserve has 1.8 million members worldwide, and 45,000 users in the UK alone. For further information on Compuserve call 0800 289378.

KEEP TAKING THE TABLETS

The boys and girls of First Computer Centre have released *Tally* - a simple low cost graphics tablet for the Amiga. The tablet has a price of £49.99, which includes tablet and Amiga driving software, and runs under Workbench 2.34 or higher.

The driver software was written by Jim Wilson of First Computer Centre and includes Amiga guide documentation, helping you get the most out of the tablet's active area.

CU AMIGA will be reviewing *Tally* next month. In the meantime you can find out more about *Tally* by calling First Computer Centre on 0532 391444.

NO CHEAP FODDER UNTIL 95

Some readers found the recent story on The Hit Squad's batch of Virgin releases a little misleading concerning the release date for Sensible's *Cannon Fodder*. Virgin Interactive Entertainment would like to point out that *Cannon Fodder*, although it has been signed to The Hit Squad will not be released until January 1995, giving it at least 12 months as a full-price game.

VIRGIN GREENS

Sensible Golf is on the way, and by crikey! It looks good! Due for release in November the Sensible team have abandoned the more traditional view of golf games in favour of their tried and tested top view with small characters system. "Instead of having a boring landscaped 3D view or recreating a Leaderboard for the 35th time, we decided to take our totally original Mega-Lo-Menu, Sensible Soccer and Cannon Fodder style and apply it to golf," says Sensible chief Jon Hare. There are three four guys walking around the courses, and they each have their own charm and personality. To appease the style-over-content consumers, we have decided to introduce a liberal sprinkling of big smirky graphics such as oversized pictures of each bloke as he takes his shot."

The game looks like it's going to be very original indeed, with some striking new ideas built in. For example, as you play through the tournaments, you can earn money which is spent on better equipment, such as laser guided balls and rocket powered clubs! We'll have more news when we get it.

VIRTUAL REALITY

A interesting development appeared courtesy of ICE during the ECTS. An American company, VideoMax Technology, displayed a virtual reality system that will extract images from the Amiga. What's so great about it? you might say. I don't want one of those hot headsets flying around my living room! Well less so. It's as extremely compact system, consisting of a set of stereo headphones over your ears and this smallest possible sort of television screen mounted just in front of your eyes. Please if you will, a look at a strapped over spec' spec with its screen in the bag part and two small head-phones on each of the straps. Now you've got it!

The version we saw was running on the PC with a specially developed landscape program and a copy of *Space Invaders*. ICE was impressive (if always a bit) but its still basically a 2D game designed for a regular screen and you also need to control it with the keyboard, full tilt point will be remedied soon. On the other hand, the 3D landscape was stunning. The brilliant thing about this micro VR headset is that it works in exactly the same way on its two low arcain accelerators. When you move your head right or left, up or down, or even sideways, sensors pick up the movement and the view changes accordingly. The only part you need a joystick or keyboard for is physically moving in a given direction or, of course, shooting something.

The PC version we saw had stereoscopic vision. Unfortunately, when the Amiga adapter becomes available it will only allow monoscopic vision, but don't worry you're not alone here the Neutrino, Sega and Jaguar adapters will only allow a monoscopic view too.

Neutrino in my mind games will not have been programmed with the headset in mind, but VideoMax assume us that this will only involve minor tweaking to awareness.

ICE, who will distribute the system in the UK for VideoMax, are very confident of its appeal. One for launch during the summer (if everything goes according to plan), it should be priced around the £500 mark. Watch this space for more news.

A bum bag with headphones - but a very good one!

A4000 ACCELERATES

If you're the proud owner of an A4000 you've probably been reading the recent reviews of A1200 accelerators with some envy. Some of the latest A1200 upgrades can make Commodore's entry-level AGA machine surpass even the A4000 in processing speed.

If you're one of those people (are you reading this John?) at Bitsoft have the product for you. Called X-Calibur the Bitsoft A4000/140 upgrade is reportedly four times faster than the normal A4000/140. According to Bitsoft, the card employs innovative memory design which is better than Commodore's original, producing an improvement over normal memory access by 40% (at 25MHz).

Additional plug-in upgrade processors are available, boasting the performance seen running in Amiga 3.0MHz will be available to complement the standard 25MHz mode, although Bitsoft hope to introduce 40MHz/40MHz shortly, and a 68000 processor version when it's up.

The upgrade is a plug-back board which doesn't use up a Zorro slot, and apparently there are virtually no incompatibility problems. The 25MHz range of X-Calibur has a price of £499.95 and should be available by the time you read this. Bitsoft are available on 0808 292196. We will hopefully have a full review of the X-Calibur next month.

"LEANING OVER THE EDGE!"

WITH ANDY LEWELLEN
Hosted by cult computer gaming supremo Andy Lewellen, "Leaning Over the Edge" checks out the possible new Amiga technology that they will make or may not see in future.

News reached my finely tuned ears this month of an stunning new peripheral now in development. The Vinyl Drive combines the latest technology combining fast bidirectional and bi-speed vinyl storage technology to give it a very low cost, high capacity medium capable of the store and playback of full motion video and stereo sound.

Powered by an 8 MHz chip codenamed RADe, internal Amiga chips

help to read and write data off the store at up to 10 times faster than standard hard drives. The RAD chip is a true piece-of-the-art technology, with an on-board

chip set, a 32-bit processor and a DSP chip providing data reduction at 10 Hz – just 10 seconds at 44 kHz.

Beta versions are already with developers and are working to produce games and other interactive products that take advantage of it. Millenium, the makers of James Bond 4 game, are already working on the first interactive games and no doubt many others will get in on the timetable soon.

By optimising production lines already in place to produce the media of the future, with state-of-the-art digital microprocessor technology, the unnamed manufacturer can produce the drives for as little as 15,000 yen (equivalent to a UK price of £90). Even better, by using a low cost Vinyl based medium the actual film and pop albums will retail for under £20. And best of all, the Vinyl drive will play all existing vinyl records and records, at either 78 or 45 rpm – cut those Beatles albums now!

ECTS ROUNDUP

The ECTS was a veritable hall of games software for the Amiga, although disappointingly, almost everything we saw has already been reviewed or previewed. Yes, we know we is hot and fast and everything, but you still want to have some surprises at the show. Big surprise: a generation of us was wowed here to Games, and the show had to be held a whole day itself, constantly packing with people wanting to take a look at the PC ROM extravaganza.

Team 7 were installing all and sundry into their bank room to see what the future holds in store. The two most interesting stations on their stands were running the long awaited Arcade Pool and interestingly enough, Superstardust II from Neodroids. Quelle Wyte Bloodbuses have moved from Dose on this one is another, but both parties seem happy with the product move.

Speaking of Dose, Bob Rothstein's Requiem and Sean S. Warm on view for all to see and Silmoris' boss Louis Miret didn't leave the meeting rooms until both games are looking wonderful, even if the PCs they were running on did crash repeatedly! Just around the corner were Kompton and Black Legend, displaying Demonslayer, the game that everyone seems to want, Tactical Manager – as seen on this month's cover, and Vortex from Team Arcane. Steve Lai di Arcane was as proud as ever he'll still eat glass to prove how good he is if we say so, Steve!

Microfog had their usual stuporous stand, displaying a wide range of PC and

Amiga projects, plus Gandy 2000 CD2 and Impossible Mission 2000, the 32-bit engine of the game that launched it from sand others. We'll have a full review of IM 2 soon. Another enormous stand holder was Vugn – they had their in-fest – and it was the large line up on the ground floor that was attracting all the attention. Admirably, a lot was in the PC series, but the idea is to stay native, and *Castlevania: Curse of Darkness* and *Castlevania: Lord of Hell* relating Amiga releases for different reasons.

Microfog's own and a comfortable castle, along with a poor person wandering around the show to a Flame La Chat installation. To celebrate the release of Out To Lava! next, Out goes as commentator, but check and bally all the way through the show were Millennium with James Bond 2 (our review on page 64) and their next big hit, Pulse. Oddly enough, they didn't have any snuffed mezzanine, not even their old Talbot Pool out. As is known, it's worth visiting out the promotional resources that did I grill some on the mark (and there were a few), such as the Snowman who was wandering around with a two men guy where his crew should have been, or Milabado's Kirby character, who was was having a terrible time actually trying to get the stairs last two weeks. His return was about two feet too wide!

There were plenty of old favourites to be found at the show too, units like CyberSpace and Breakthrough from Empire, Alex Fallo from Cyanide, amazings Quzy gamma from Cyanide, and even Simon The Seagull CO made an appearance. A good time was had by all.

DEVELOPMENT & ANIMATION

Another product creating massive interest at the ECTS was DPS's Personal Animator Card, or PAR for short. This astonishing card was plugged into an A4000, recording and playing back full motion full screen video – but it wasn't using MPEG or VideoCD compression standards. Instead, it was compressing the video in real time using a variant of the JPEG compression technology and then storing the images to a hard drive. It provides component video and S-Video in and out and will store the images on high capacity hard drives. CU AMIGA will be reviewing this exciting Amiga card next month.

Elsewhere around the show Amigas in various guises could be found. Long time Commodore trade distributor SDI was drawing crowds with the CD32 and a CD card showing various films and pop VideoCDs whilst Empire software were showing their recently launched Herma Barbera Animation Workshop. Phoenix were showing a CD32 being used to demonstrate a new development system called PSY-Q.

In addition to the various organisations with stands there were also a great many serious Amiga developers wandering around, usually hovering near the bar. These included Almatheria, Hscott, Power and Amitek. Considering that this show was essentially dedicated to games, the large number of serious Amiga developers and users around was surely a good sign for the Amiga in the future.

MORE BIG BUDGET SIGNINGS

The Sigil Squad aren't the only company buying up big games at the moment. Action 16, the budget arm of Digital Integration have recently taken on board the wonderful RPG World Of Legend from Mintapple, which, if you remember, received a massive 10% in CU AMIGA, in the Amiga Golding classic *Jack McRae's Ultimatum*. Gold & Contra Design both should be in a healthy soon, costing a mere £10.99 each.

STAR CUTS PRICES

Star Micronics has reduced the RRP's for all its dot matrix, laser and colour thermal printers, in some cases by as much as twenty five percent. The new prices see the popular LG-100 fall from £1.99 to £1.49, and the LG-240-100 drop from £2.09 to £1.59.

For further information on the range of printers from Star Micronics contact 0494 471111.

COMMODORE SHIPS ITS WARES

ECTS is primarily aimed at the games industry, but Commodore has finally bitten the bullet with the arrival of Amiga games on display at the show. But as ever there are scammed around, several companies using the Amiga for other purposes.

The most notable of these was, not surprisingly, Commodore. The Big C didn't just have a stand, they had a whole suite to themselves, in which they were showing off their wares. All the existing Amiga models are now available, new graphics, were as always. Thus revealed the new CD-ROM drive for the Z120 (as exclusively revealed in last month's CU AMIGA) and the new A4000 tower system. The tower system was shown using sonet and gbitethink erg is a high end SCSI hard drive.

The Commodore suite was also used by several potential Amiga developers to show off their new products. These included RAMIGA, BREMER Vision, and other people from Commodore's ACE initiative. The products on display ranged from very large, very fast SCSI based hard drives and optical drives to the neatest of Video Teater running on UK systems via a PAL converter.

AN AWARDING EXPERIENCE

Every year at the ECTS the greats (and the not-so-big) of the games and publishing industry gal together and give each other awards. This year, the ceremony was held in grand style at the London -repent's Hotel on the first night of the three day show. Hosted by Radio 1 DJ Mark Goodier with guest appearances from Dominic Diamond and Mike Edwards from Jesus Jones, the 18 categories were voted on by a panel of editors from games magazines around the world along with readers from certain regions. The full Amiga roll of honour is:

Most Original Game: SYNDICATE

Software Publisher Of The Year: VIRGIN

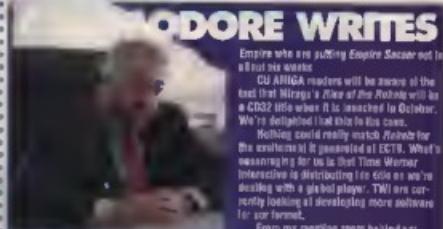

BBC Live And Kicking Award: FRONTIER - ELITE 2

The other 15 categories were predominantly PC and console based, with Lucas Arts scooping three awards for *Rebel Assault* and *X Wing*.

TOAST OF THE SHOW

I was on the Newtek stand that perhaps the most exciting news of the entire show could be found. Newtek are currently in negotiation with several trade distributor to establish an official network of UK dealers. The Video Toaster and we should see the first Newtek supported Toaster and PAL converters available by mid summer. At the time of going to press, SDI are hotly tipped to be Newtek's official UK distributor. The PAL converter uses a 26000 Prima Image system, and it converted the NTSC signal the "Toaster produces to an UK PAL signal wonderfully. According to Newtek they are now working on a real PAL Toaster and although not definite yet, they hope to have versions ready 'sometime' next year.

Newtek are also evaluating the potential for releasing LightWave as a stand alone application and selling it to games developers. One of the reasons Newtek have at last decided to move into the PAL market is the new generation of games consoles now appearing. Modern games are no longer about sprites and poor animations, but more often 24-bit graphics, 3D landscapes and rendered images - *Rise of the Roberts*, *Mystocomm* et al. To create such graphics software developers need hefty graphics workstations. Unless of course they happen to have a Toaster! The advantages in speed and intuitive user interface on display were enough to convince many graphic artists that they should spend their money on a Commodore based system and that was before they found out how much cheaper an Amiga system was compared to Silicon Graphics Inc. It's ironic but Commodore is at last making a name for itself and doing so by helping games developers on other platforms!

Recent in the last month a European Computer Trade Show appear to be a quarterly mind tag. On the one hand the organisers tell me, it will be the biggest ever with around 7,000 visitors from 30 countries. But then again quite a few disgruntled journalists feel at least a good few entries were missing.

I found it a refreshing occasion, if we're measuring one. It was Commodore's final appearance at this important trade show in over a few years. That was my decision - I didn't feel it's a sensible idea to contribute to the legend of Commodore's decline in influence. And a communiqué has been the foundation of the Amiga's success. I want to keep it that way.

Well, I'm pleased to say that ECTS marks the beginning of a new exciting new relationship - at least seven new partners have committed to developing for Amiga C32.

They obviously noticed that the workshop new accounts for more than half the CO software sold in the UK.

That's it! I can talk about it. Well, I can't who are working on Cyberspace game in the style of *Lowercase Mad*. Maisie who will convert *Star City 2000* and may get some help from their French catalogue on CD and

Empire who are putting Empire Soccer not in a box but on a screen.

CU AMIGA readers will be aware of the fact that Mirage's 2½ of the Amiga will be a £22.99 title when it is launched in October. We'll be highlighting this in the coming weeks.

Nothing could really be more appropriate for the occasion if I mentioned ECTS. What's happening at Amiga is that Time Warner Interactive is distributing its titles as we're dealing with a global player. TWI are currently looking at developing more software for the Amiga.

From my meeting room built up a clear I would see what I was doing created. Yes, Installation associated for this first, was NewTek's Video Toaster which was doing extremely well marketed by our California friends with Primatech's PAL converter. It was called the best Amiga peripheral ever - you can see why I wanted you just the Amiga of choice of choice anymore.

NewTek are building up distribution channels we speak. When it's all taken care of I'm confident the Toaster will carry a dominant UK distribution just as it has in the US.

Recently, the Amiga 3200 CD drive. After months of speculation since it was, in prototype form, at last, My position on the software is that we have to work towards a low price. We'll support Amiga and I think this will be a disappointment for some people who will pay it right. If all goes well, we're aiming to have it right.

Finally, probably because it's not our disappearance, there's a tremendous. Don't be discouraged. You're on the right track - sales have been cut by 70% in most sales are bottoming. And the UK is still the best sell of the Amiga. Where else does a specialized Amiga magazine appear amongst the top 100 best sellers on CU AMIGA down? No, the UK is special. That's never going to change.

JARGON BUSTER

PAL - The standard for UK TV signals; most UK televisions can only handle PAL TV pictures and not American NTSC, and vice versa.

NTSC - The standard for US TV signals. The Video Toaster (see below) is designed to only work on NTSC systems. To use a Toaster in the UK you, the pictures must be converted to the PAL standard.

LIGHTWAVE - An extremely powerful 3D image rendering application which only runs on the Video Toaster, and is only available with Newtek's product.

LIGHTRAVE - A very handy software utility that allows LightWave to be run on most Amigas, even without a Video Toaster.

VIDEOTOASTER - The best graphics card available for Amigas in America. The Video Toaster lets the Amiga create special effects, images, and video captions equal to if not better, than some of the top TV production graphics workstations. The Video Toaster is one of the main reasons why Commodore have done so well in America.

BET YOU'LL LIKE THIS!

CU AMIGA
investigates

Acid Video vs Professional Video

The cutting edge of video production is being sharpened to a point by Amiga users. These people use their Amigas to produce video, be it video editing for underground films and parties or more expensive work for business, business presentations and corporate adverts. Over the next few pages we reveal who they are, what they do with their Amigas and how they do it. In short, we give you a complete low down on Amiga multimedia, from the movie license to the Hollywood and TV film industry and on to the business arena. Enjoy learning it your mind through the pin-up pictures and art of Amiga video and Foley Hanger than take a look at the Acid video game.

MIND THE GAP

We start off by looking at the UK corporate market. One of the highest-profile users of Amigas in the UK corporate market at present is the London Transport Museum.

The display at the London Transport Museum is a fine example of what can be achieved with the Amiga for interactive work. Turned around the museum are various displays and interactives terminals providing information on the history of transport etc. This also allows a driving simulator or a passenger on board LTM's most popular and unique interpretation. This uses state-of-the-art technology with 3D graphics to let the user see the London Underground from a first person's point of view. Surprisingly, they don't use high powered PCs, VideoToaster, or even Macintosh. Nope, they use an Amiga 1200 for creating and editing video.

The Amiga is supplied with the London Transport Museum's software by Index, a company operating out of Chelmsford. Index Information has been responsible for putting up a great many of the computer terminals employing Amiga technology, and they lead the way in this area here in the UK. Other organisations they have helped to include BBC Scotland and British Telecom.

Index Information have developed a hardware expansion card for this LTM which runs on the Amiga. Called the UPS32, it provides two serial ports, a parallel port, net-work card and even an optional graphics. This expansion has proved hugely popular amongst Amiga users, so much so that it may well be released as a home-computer product shortly.

ROLL 'EM!

The UK's industry is another area which has been helped by the power and versatility of the Amiga. David Blamire is probably the man who does the Amiga's corporate film and editing for LTM. He started with a BBC Master 28 computer, working in an independent video-happy town called Tiverton. Then he came across the Amiga and was struck by its ability to generate easy, changeable colour palettes and its general ease of use. Now he's worked his way up to an Amiga 3000, fitted with an Opal Vision 55 bit graphics card, a 1 gigabyte hard drive, a Sharp JX300 scanner and a DPS PAR (Animation Processor) card. He also uses Digital Sound, ArtPro, and DrawCast 7.0.

Most of the work he does is video editing although with the DPS/PAR card he is now doing compositions and effects with video. "It gives the best quality playback I've seen from any hard-drive system", says David.

For video titles he uses bats, Scale and Dissolve from NIK. Paintshop Pro is used for stills, and he's currently working on a new version of it.

His latest project is to make sure film cuts look like Gollum, which, whatever application, unfortunately still won't fit the Amiga. "I am a broken-down film editor", says David, "and each chapter has its faults. For the 'Gollum' I used Opal Paint to create hundred of hand borders."

Another film he recently worked on is called *Away Day*, for which he used Sharp scanners, Scan to Sound, PaintShop and other programmes with the Amiga and Opal Paint.

David hopes to expand, and is currently experimenting with the DPS/PAR card to see what else he can do with it.

ANYONE FOR TOAST?

In America, NewTek's Video Toaster is probably the one product that has come more or less straight from the Amiga adapted by professionals than all other related products and computers combined.

For those who haven't heard of the Video Toaster, it should explain. The

Professional VIDEO

(Illustration above left, the Emray award-winning Video Toaster; top right, the Sharp DPS/PAR card; and far left, a still from *Robotopia: The Series*.

VideoToasters is an expansion card that plugs into the Amiga 2000, 3000 and 4000 and comes with a suite of powerful graphics software. It allows users to create animations, titles, 3D graphics and effects that are frequently beyond the capability of TV production systems. It's also far cheaper than any other comparable system.

The Toaster's appeal is widespread, finding favour among hobbyists, corporations, film companies (both small and large), and production agencies.

ROBOCOP

The power and the once of the Toaster has created a vast market of professional users (sales of the Toaster have increased between 50,000-80,000). *Robocop*, *SeaQuest DSV*, *Star Trek: The Next Generation* and *Babylon 5* are just some of the better-known works that some high-end production companies have created using the Toaster. Hell, this thing's even won an Emmy Award for advancing television technology!

Robocop, The Series has also been receiving the Toaster treatment. One of the most popular sci-fi TV series in America at the moment, it's an extension of the film, with the same high quality of effects, gloomy future feel and sense of the original.

This American syndicated series is produced by Canadian-based SkyVision Entertainment, and is hugely popular throughout America. In fact, the second episode got the second highest viewer

rating across the United States the evening it was shown! The series has so far proved even more popular than *Star Trek: The Next Generation*: we're talking millions of viewers here!

The Amiga is used extensively throughout the show, creating many of the special effects both in its own combined with traditional visual effects, and in conjunction with work subcontracted out to an agency using a Silicon Graphics workstation.

Thanks to the Toaster, SkyVision can save the time and expense of traditional special effects. Combined with the Silicon Graphics workstation, they've got all bases covered, as Lee Wilson, SkyVision's Visual Effects Supervisor explains: "The combination of the two systems incorporates all the elements of visual and special effects design and computer animation with live action, against blue screen and mattes, creating an exciting and totally unique look."

The Visual Effects team use an Amiga 4000 with a Video Toaster and although the Amiga system was not originally in their brief, SkyVision went for it in the hope that the added computer power would pay for itself. The result was unexpected.

"A few days after the Toaster arrived, I came in to work to find the entire visual effects crew still in the department after pulling in an all-nighter. The outstanding work they'd done is saving the production firm and money, creating elements we don't have to sub contract to other companies," explained Stephen Downing, Executive Producer, SkyVision.

Typical uses of the Toaster include creating much of the imaging used in *Reboot's* intro – dubbed RoboVision – showing elements such as targeting, computer feed and systems diagnostics. Many on-screen animations and effects that would normally be either impossible or costly to produce are also produced using the Amiga.

Explosive pucks thrown by Reboot, for instance, are actually animated, and every shot of the puck after a series Reboot's hand is created by Lee's team using the Amiga. One example of the flexibility and power that the team have put the Toaster to is creating an entire helicopter flight.

Lee elaborated, "In a merging of the two systems (Amiga Toaster and SGI workstation – ed.), the helicopter was built and animated in the computer using Toaster and the Lightwave 3D program then flown over Delta City and John Fraser's beautiful matte painting." Here the artist, John Fuerst, created the futuristic cityscapes on the workstation, which were then dropped in, using a

blue-screen matte, to live footage shot on set, and the helicopter (created with the Toaster) was then added.

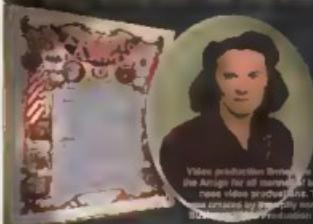

The end result is people in a city, with cityscraper backgrounds and a helicopter flying in over them – yet in reality only the octopus and their surrounding net actually existed!

What's interesting to Amiga users is that rather than simply use the Amiga for static backdrops (if at all) the visual effects team chose to create the moving helicopter with it, and leave the still pictures to an, in theory at least, more powerful workstation! I didn't know about you, but I for one can't wait for the UK showing."

SEAQUEST

Another guy doing wondrous things with the Amiga in the film industry is Tony Stutesheim from Amblin Images. Amblin are one of the most ambitious Amiga users around, using it to create some well known TV programmes in the US. Most notable of these is *SeaQuest DSV*.

Nearly all of visuals in *SeaQuest*

are created with an Amiga, to the tune they really push their Amigas and pack them with RAM, hard drives and accelerators – in the words of Tony, these Amigas are at "maxed-out"! As a result they have some of the best Amigas you can get. But even so, they would still like more power – particularly to increase the screen redraw speeds.

Most of the work is carried out with Lightwave and Toasters, although they also use DPaint 4 for many of the graphics seen on the monitors on the ship. AdPro is also used to convert files from other formats.

But it's not all action and adventure for the Toaster. Another avid user is Guy Beckel, a graphics designer and 3D-animator for Business Video Productions Inc of Denver and Tampa, Florida.

Business Video Productions produces a variety of different types of work for some major organisations and corporations in the states – and charges some major fees as well.

Their customers include Price Waterhouse, TCI International, AT & T, and Novacore. They use the Toaster for a variety of operations, such as video titling, 3D presentations, and business graphics. The work is used

In training videos, employee communications, and sales and marketing. In addition to the Toaster Guy also uses DPaint and AdPro. These and the Toaster run on an A2000 and A4000.

According to Guy they use the Amiga and Toaster because, "it's both flexible and powerful."

He originally started using an Amiga, the A500 because "it looked like a happening machine". He's stuck with it ever since, and now feels that "it's more flexible than any other format."

GENIUS

Another keen Toaster user, but one with a difference is Stephen Harris. Stephen is odd. Odd because he is on his way to becoming one of the most sought after Toaster users in the US, yet he's only 18!

His work is used on TV creating visuals for the WTV TV channel, an organisation that has very high regard for his work – "You're a genius!" Is how WTV director Stuart Grasberg described him – and he was only 15 then.

Stephen's work has also been seen on the mighty CNN, and on several other nationally shown TV shows. His most recent work being for a program on women's health. The animations included a camera moving inside a modelled woman's body and seeing a beating heart and various organs. It also included an animation of a medical balloon that travels in a blocked artery to unclog it. This will be shown across the USA on June 9th.

Stephen uses an Amiga 2000 with the Toaster and loves it because, "The Toaster is so easy to use and has the capability at a higher priced workstation."

With it he creates stunning 3D images and animations. "It's fun" he says, "you can be as creative as you want to be."

As well as being fun, it also makes him a lot of money. His company, Optical Art charges about \$120 an hour for modelling and \$250-\$400 per second for the actual images! And this is cheap for corporate and film video. Let me tell you, prices often run into tens of thousands of pounds. Steven is doing as well he recently bought himself a Mercedes – his first car! Not bad for having some fun with an Amiga.

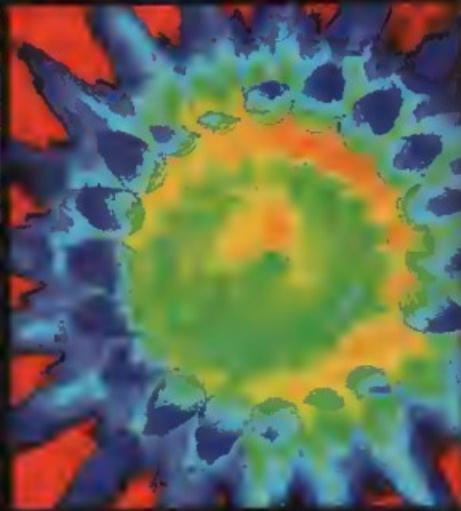

IF YOU WANT TO KNOW MORE!

CU AMIGA thanks everyone who assisted with this article, in particular David Beckel and who can be reached through the CU AMIGA editorial offices and CIX Lee Wilson at the Reboot production company, Christine Knighton of Novacore, Inc. Latrice McDonald from GVP Inc. Stephen Harris Jr and Sri of Optical Art.

\$

AcidVIDEO

Shiny company logos are all very well, but there's a raw flipside to all of that corporate video stuff. It doesn't have a name yet - it's too whacked out to be squeezed into a cosy pigeon hole (although we've called it 'acid video'). It's the cutting edge of visual entertainment, and it's all happening thanks to the Amiga! Digital sound-samplers totally revolutionised pop music in the mid 80s - the Amiga is now doing the same for video. Weirdo videos are taking underground clubs and raves across the country to new-found heights, and you could be a part of it all.

With a few bits of kit, anyone can become an underground video jockey. The best thing about it, is that you don't need all that expensive high-end gear to knock out the kind of mind-bending images on these pages. You've probably already got enough to get started already. Just an Amiga and a copy of Deluxe Paint II alone is a ticket to trip-licity, if you know what buttons to push!

KIT FOR STARTERS

RGB/Time Base Correctors, Masters, Kettles and blowaws - you won't be needing that lot now. Here's a list of what you will need to get started, followed by a list of hardware that will expand your

options a great deal. You'll find box lists are misleading.

BASIC KIT:

An Amiga
An VHS VCR
Deluxe Paint II (or similar)

EXTRA KIT:

- A genlock
- A chromakey
- A video digitiser
- A hard drive
- A second VCR
- A vengarder

Check out the buyers' guide (early on the next page) to fit your budget.

WHAT IS IT?

INDIVIDUAL & TEAM PRACTICE

ANCO

Published by Anco Software Ltd, Unit 7, Millside Industrial Estate, Lawson Road, Dartford, Kent DA1 5RH Tel: 0322 292513 Fax: 0322 293422

ANCO

Technology to sample any moving or still image is now available at 'affordable' prices, and the options for synthesising your own visuals is limitless. The question isn't so much 'what is it?' as 'what isn't?'

TECHNOHEAD VJs

We've all heard of DJs. Now there's a new breed of club entertainer, the VJ. Video Jockeys are the ones responsible for the visuals that are stiletting the eyeballs of clubbers and ravers at the more experimental parties around the world.

People are actually taking their Amigas out and gigging with them, live and direct for the hoards of sweaty party people of club nights - like Andy Weatherill's Sadresonic, Heaven's Megapolis, The Ambient Club and stacks more regular and one-off events all over the country.

HEX

Matt Black of Hex and Cold Cut, is one of the new breed of VJs currently doing the rounds with his

A1200, a copy of Deluxe Paint, and a couple of video decks. Mixing visuals from video tape with spontaneous animations, created on the fly with DPaint he takes the visual stimulation a step further than the strobe and spinning lights of your average old Wild explosions of colour from DPaint are cut up with the clinical animation of a ray traced sphinx, which rotates and zooms around the screen clocked in a mass of video feedback fuzz. Then there are the slogans that worm their way into the subconscious, and stop-frame digitised animation loops, not to mention all the rest of the weirdness that defies description.

Hex and Matt Black can be caught at various clubs and parties around the country. Check you flyers and the music press for forthcoming gigs.

SP VISUALS

Steve and Pod are the S and P of SP Visuals. Using their Amigas to south the mind rather than type it up, they supply the visuals for The Ambient Club, which has recently got off the ground in London. There's no wallet-busting hardware here - most of the images and animations are created on a single A1500 (I told you, any machine will do).

DPaint is the workhorse of the setup, responsible for most of the output. Inventive use of the animation features, and a good eye lot what works has led to them building up a bank of simple but very effective material.

SP Visuals are another collective who like to take their Amigas out with them and play live, but instead of relying on expensive video projectors to get their visuals to the masses, they use a clever concoction of slide projectors to combine transparencies or screens created on the Amiga.

For more info on SP Visuals, contact Pod on 081 341 0655, or Steve on 071 281 0512.

DEEP EVOLUTION

Exactly one year ago, we ran a small piece on Deep Evolution, an enterprising pair who had just released a 20-minute video called CyberDream, which was made up mainly of fractal effects with a few digitised ani-

tions thrown in to spice it all up. Twelve months on, and Deep Evolution have progressed to far more impressive things.

Vision man Alistair Penneycock and DJ Steve Griffiths are now up to all sorts of things. They are the ones responsible for the turtle picture which is gracing our front cover this issue. Deep Evolution is now a major force in club visuals. From a humble set-up of an A500 and a video recorder, they've now expanded the system to include AGA Amigas and video digitising facilities. Provisionally titled Nercos, the follow up to the CyberDream video looks like it'll be a massive leap forward, with all kinds of new effects and tricks coming into play.

The turtle shot is a frame from a looping animation, which sees the aqua-tortoise flying through a plane that has sky both above and beneath converging at a horizon in the distance. The turtle was grabbed from a video, cut-out, and then put over the sky backdrop, which was mirrored to give the effect of a second sky on the ground. It's nothing you couldn't do with the simplest digitising setup, and looks just amazing when it moves!

Combinations of digitised images and rendered objects courtesy of Real 3D make up a lot of the rest of the video. Even more mind-twisting is the sequence that has a head being sucked down a plug-hole, and lightning last tunnel sequences.

Steve and Alex have even written part of the 40 minute video's soundtrack with OctaMED, and mixed in other MIDI music and bits and pieces from Steve's vinyl collection.

The real test of all this is in a party situation, and so far, the boys have had no complaints. Playing out at some of the top nights in the North and Midlands, Deep Evolution have been entertaining the crowds with a variety of visuals, with techno tunnels and computer generated imagery for the more ravey nights, through to short loops from old B-Movies, and digitised real world images for the handbag clubs.

For more information on the forthcoming video, or the live Deep Evolution experience, contact Alex on 021 443 3223. Thanks go to UDO

Not just another ball game...!

SIERRA SOCCER

World Challenge Edition

Features:

- 1 to 8 players
 - Adjustable game duration of 2 to 20 minutes
 - Over 500 team members, each with own ability levels
 - 26 of the World's top teams
 - Option to create over 40 new teams
 - In-game substitution and formation changes
 - VCR style replay includes slow-motion and freeze-frame
- Digital sound effects and speech
 - Over 4000 animated player Images
 - Penalty shoot-outs
 - Free-kick practice
 - Ref, linesman, physio and stretcher team functions
 - And much, much more...!

Base configuration:

Amiga, 1 Mb of RAM
Compatible with all Amigas including A500+, A600
Enhancements for A1200,
A3000 & A4000

«Frankly it looks excellent» - «It's shaping up to be a cracker» In fact, Sierra Soccer could well turn out to be the dark horse of the season» , AMIGA ACTION

An especially high level of artificial intelligence that really makes the players work like a team» .

JOYSTICK

Buyers' guide

You've seen what the experts can create on their Amigas, now for the definitive guide on the hardware and software needed for Amiga video and graphics. Plus: A complete run down of the latest Amiga paint programs!

With the AGA chipset now present on all production Amigas, you might be forgiven for thinking that the demand for graphics cards would have diminished but in reality more Amiga users than ever want to improve their visual style.

All the currently available Amiga graphics cards offer true 24-bit colour, which allows any pixel to be a colour picked from a palette of 16 million shades. Most of these cards work at very high resolution, and the better ones have a video output quality which is good enough for television companies to broadcast directly.

Graphics cards generally come with a paint program of some description aimed at taking advantage of the superb colour range, and the extra speed made possible by the more direct way the colour data is stored.

All these cards are designed to fit inside a 'big box' Amiga which rules out the A1200 and lesser machines. They provide an excellent way for A2000 and A3000 users to get better-than-AGA graphics. In general they all use an Amiga graphics standard called EGS, and if you are considering buying a graphics card you should try to get one that complies with EGS. This standard is a way of allowing different graphics cards to remain compatible. EGS creates a common set of library calls, which means any EGS program will run on any card. A popular EGS-compatible program

Graphics Cards

is TV Paint. For value for money we recommend the Picasso II from First Computer.

RETINA

One of the first true colour graphics cards, the Retina is still a bit special. Not only does it come with the embarrassingly-named WDPaint, but it also manages to emulate the Workbench display which means a single monitor is required. Many existing programs will run directly through the Retina system which makes integrating it into your own system quite easy. One of its strongest features is the ability to link it with MacroSystem (otherwise's card) (VLab for example) to produce a very impressive image capture and display system.

Name: Retina
Price: From £329
Supplier: Amiga Centre Scotland
Tel: 0806 87583

PICASSO II

Widely hailed as the best general-purpose graphics card ever, the Picasso card is basically a drop-in replacement for the existing Amiga graphics chipset.

The video pass-through means you only need one monitor to see the improvements.

Although it is not the fastest card ever, the Picasso is probably the best at coping with the Amiga's standard Workbench system.

Recommended.
Name: Picasso II
Price: £299 (1Mb)
£335 (2Mb)
Supplier: First Computer Centre
Tel: 0532 319444

RAINBOW III

The Rainbow is one of the most expensive video cards ever, due to its rather generous 4Mb of high-speed video RAM (more than enough for multiple high resolution, true colour screens) and the extra fast graphics chip used. The fact that a 32-bit card requires an A3000 or A4000 in order to work may have something to do with it as well.

The Rainbow is also one of the lastest graphics cards available. It comes with EGS support as standard, which means a new look

Workbench (but no software to run on it). It can use TV Paint.

Name: Rainbow III
Price: £1699
Supplier: ChertScreen
Tel: 0425 475515

SPECTRUM

It might be cheap, but the Spectrum is still one heck of a graphics card! It comes with either 1 or 2Mb of RAM, and can support the EGS standard. An on-board blitter keeps up the pace, and takes advantage of the new slots in an A4000 (if you have the right busier chip). Only one monitor is required, as a special video pass through system is used.

Multiple cards can be fitted to the same Amiga, which allows for really huge multiple-monitor displays. It also runs TV Paint perfectly, so the Spectrum is one of the cheapest ways to get EGS compatibility.

Name: Spectrum
Price: £349 (1Mb)
£399 (2Mb)
Supplier: Silica
Tel: 081 309 1111

OPALVISION

This was a card that promised so much — even as much as being the PAL answer to the video toaster. Sadly, not many of the promised options have become available, but it

remains a mighty fine graphics card. OpalVision comes with a vast hoard of support software which really puts the other cards to shame. The OpalPaint program is excellent (rivaling TVPaint) and the other items of software demonstrate the ease with which the Opal system integrates with existing Amiga graphics. As it connects to the Amiga's internal video slot, an extra monitor isn't required.

Name: OpalVision
Price: £260
Supplier: Indi
Tel: 0543 419 999

HARLEQUIN

The Harlequin is a broadcast standard video card, which has been used many times by professional video companies. The video output is rock solid, and the list of features is impressive, with an internal 8 bit alpha channel and double buffering options. Software support is good too — most of the top graphics packages can be used with it.

A second monitor is needed to see what Harlequin is up to, but watching Real3D video using the card to render on a separate display is a great way to prove the Amiga's graphical dominance to passing PC users. There are many different versions of the Harlequin, each with differing amounts of video RAM and various optional genlocking options.

Name: Harlequin
Price: From £800
Supplier: Amiga Centre Scotland
Tel: 0806 87583

SPECIAL EFFECTS

A keyer is the shortened name of a 'chromakey' — a miraculous video device which is used all the time in professional TV studios. A specific colour in a live video signal can be forced to become transparent, allowing the computer graphics underneath to show through. For example, in a TV studio a weatherman or woman stands in front of a large blue sheet. The blue colour is keyed out, and replaced by a computer-generated weather map, complete with animated clouds and raindrops. Both CineMorph and Morph Plus are capable programs, although Morph Plus has our vote.

ROCKEY

This provides about the best fun you can have with video and its uses will really only be limited by what you can dream up for it! If you want to make some professional looking demo videos, then you must get hold of one of these. You will also need to get hold of a normal genlock (the Rockey locks well beside it). Getting the lighting right takes time, but with lumaking and chroma keying options, this is one smart box of tricks. If you already have a genlock, rush out and buy one of these now.

Name: Rockey
Price: £129.95
Supplier: Silica
Tel: 081 309 1111

A SWITCH IN TIME?

A Time Base Corrector is essential if you need to combine two live video signals. The problem is that in order to properly use fancy dissolves and overlays rather than basic ones, you need to synchronise the incoming signals perfectly. Each video frame changes fifty times a second, and the start of each frame from both sources must be matched perfectly. This is where a TBC comes in – providing the complex circuits needed to "sync" together two video sources. The Amiga Centre Scotland have recently released their In-Cade TBC, which is well worth investigating.

Name: **Rocgen Plus**

Price: £TBA

Supplier: Amiga Centre Scotland

Tel: 0895 67583

Alternatively, GVP also produce a TBC cunningly called the GVP TBC, which provides everything you'll need in a TBC – CU AMIGA will hopefully have a full review of this next month.

Name: **GVP TBC**

Price: £TBA

Supplier: Silice

Tel: 081 309 1111

GENLOCKS

A Genlock is a piece of hardware which is vital for superimposing computer graphics over real live video. The mixing has to be synchronised, and certain colours in the computer video signal must be made transparent so that the live video to show through.

The more you spend, the better the quality of the output signal, and the more features. With better genlocks it is possible to fade in and out one or both of the two images, pick the colour you want to make transparent or even invert the transparency colour. We strongly recommend the GVP G-lock.

MINIGEN

How can you possibly go wrong at this price? The Minigen is an ideal first genlock and will open the door to all sorts of video effects. The image quality, admittedly, is far from perfect, but it works well, especially with live video from a camcorder.

Name: **Minigen**

Price: £49.95

Supplier: Lola Marketing

Tel: 0858 880182

MINIGEN PLUS

Add £100 and you get some extra styling options, a lead and an extra RGB output for monitoring. The picture quality is better than the Minigen, but far from exceptional.

Name: **Minigen Plus**

Price: £49.95

Supplier: Lola Marketing

Tel: 0858 880182

ROCGEN PLUS

An altogether classier genlock, the Rocgen offers good image quality at a very reasonable price. It will fade and dissolve very smoothly, and is

worth the extra if you are thinking of getting into Desktop Video.

Name: **Rocgen Plus**

Price: £149

Supplier: Silice

Tel: 081 309 1111

VIDOCENTRE

Now here's something that looks a bit special – the Vidocentre from G2 costs a lot more, but delivers some really top-notch effects. It works with SVHS or normal VHS and offers all the standard genlock features and more besides – a miniature joystick controls video windows of different shapes and also some rather advanced wiping effects. A recent price cut makes it an excellent value for more serious video buffs.

Name: **Vidocentre**

Price: £495

Supplier: G2

Tel: 0252 737151

G-LOCK

Possibly one of the most technic-looking genlocks available is the G-Lock from GVP. Denote the little black box put you off? There are more features crammed in here than a typical issue of CU AMIGA. Not only are the normal fading and mixing effects here in abundance, but the G-Lock will also cope with the much crisper SVHS video standard, as well as providing an integrated audio mixer. To top it all off, all G-Lock's features are totally under the software control of AReaxx under the software control of AReaxx which makes it ideal for those willing to experiment. Definitely a bargain at the current price.

Name: **G-Lock**

Price: £299

Supplier: Silice

Tel: 081 309 1111

SCANNERS AND FRAME GRABBERS

As far as computers are concerned, there are two types of images – those which appear as real live video, and digitised graphics. Turning one into the other is often tricky and will require extra hardware. If you want to edit your computer and Deluxe Paint to process pictures taken from your video recorder or camcorder, you first need to digitise them. This process measures the levels of the primary colours red, green and blue and uses this information to reconstruct the image on screen in a standard image format. This image can then be loaded into a program such as Deluxe Paint for the customary adding of ridiculous moustaches. Some digitzers can even capture sequences of video which can then be used for animation purposes.

For images which exist as printed pictures, such as an ordinary colour photograph, you'll need a scanner. Scanners come in two types: hand scanners, and flatbeds. Hand scanners, especially black and white ones, are relatively cheap. Their great advantage is that you don't need a video signal; any picture will do. Their disadvantage is the quality of picture isn't perfect. Simple line drawings work the best, but the results from hand scanning full-colour photographs won't be as good as pointing a video camera at the picture and digitising it.

On the other hand, flat bed scanners give astonishingly good results – much better than video. The larger ones operate a lot like photocopiers, and can capture pictures at very high resolutions (800 dots per inch for example) in true 24-bit colour. For digitzers we recommend VLAB whilst the Epson GT8000 gets our recommendation for scanners.

VLAB

From the same manufacturers as Retme, VLAB is an excellent piece of video grabbing hardware. It's available as a Zorro card or as a box which connects to the parallel port, but the Zorro versions are a lot faster. Image quality is top notch, and the SVHS version can be used to digitise entire sequences of video by making several automated passes.

Name: **Vlab**

Price: £289

Supplier: Hobbyte

Tel: 0727 856005

VIDI

Rombo seem to have been churning out high quality/low price video digi-

tisers for yonks now, and a large percentage of Amiga owners either have or want a Vidi 2 for their Amiga. With care, the image capture quality is pretty good and all models of Vidi can be upgraded; they are a good place to start. The Real Time versions make capturing colour images from live video footage possible.

Name: **VIDI**

Price: £99.95

(Vidi12) £199

(Vidi24RT) £299

Supplier: Rombo

Tel: 0906 414631

VIDEOMASTER

One of the first PCMCIA peripherals, Videomaster will grab video frames and sound in real time directly into the memory of the A1200. If you experiment, you can create some amazing results, and the new software will allow standard IFF animations to be created. Videomaster will also grab colour full-sized screens with quality comparable or better than Vidi 12.

Name: **Videomaster**

Price: £79.95

Supplier: HISoft

Tel: 0625 718181

JX 100

With a scanning resolution up to 2000DPI in 16-bit colour, this miniturised flatbed gives some amazing results. The supplied software is a bit old these days, but ImageFX will drive it directly. Recommended.

Name: **JX100**

Price: £399

Supplier: Silice

Tel: 081 309 1111

EPSON GT6500/8000

For top of the range scanning, these Epson devices are the bee's knees. With scanning resolutions in the thousands of dots per inch, these devices will scan an A4 page for you in monochrome, greyscale or 24 bit colour. The ultimate.

Name: **GT6500/8000**

Price: £599/£849

Supplier: Power

Tel: 0234 273000

» IT'S ALL IN A TITLE

Owning a genlock is only half the story; you need software to help create and manage the graphics you wish to display. It's possible to get by with a program such as *Deluxe Paint*, but a dedicated titler is a better bet. These range from a program that does little more than allow text to be displayed in different fonts and moved up and down the screen, through to a true multimedia development platform which will handle animations and sound effects. For video titling it has to be *Video Stage Pro*.

BIG ALTERNATIVE SCROLLER 2

Simple, fast and basic. Allows titles to be entered and displayed in a variety of ways, nothing complex, just simple and easy.

Name: Big Alternative Scroller 2
Price: £59.99
Supplier: Emerald
Tel: 061 715 8866

VIDEOSTAGE PRO

A great drag and click interface, and plenty of options makes the latest *VideoStage* more than capable of generating your titles.

With an *ARexx* compatible genlock such as GVP's G-Lock, some extremely advanced effects are quite possible.

Name: VideoStage Pro
Price: TBA
Supplier: Merlinian
Tel: 061 543 3500

SCALA

More an authoring package than a video titling system, *Scala* is renowned for its ease of use and professional results.

Super smooth fonts with many different effects makes it the top of the range titler.

Name: Scala MM210
Price: £149.99
Supplier: Emerald
Tel: 061 715 8866

LET'S GET ANIMATED

Most paint programs handle animation as standard – certainly both *Deluxe Paint* and *Bitblitance* can be used to knock up some high-quality shorts. There are, however, several programs which exist only to aid in the development of animations. These programs offer an 'onion-skin' feature whereby previous frames can be seen faintly as you draw a new one. In the same way as a traditional animator would use several sheets of calls stacked one on top of the other, if you're into animations then you should consider one of these, although we prefer the more pricey *Disney Animation Studio*.

DISNEY ANIMATION STUDIO

A good place to start is the Disney Animation Studio. It offers many features a beginner will need, and can

produce reasonable anims, although advanced users may find it limiting.

Name: Disney Animation Studio
Price: £79.99
Supplier: Infogrames
Tel: 071 738 6199

HANNA BARBERA ANIMATION STUDIO

This package is aimed more at younger users, and as such doesn't have as many features or capabilities. It can still create some basic animations though. (See the review on page 108 of this issue for more details.)

Name: Hanna Barbera Animation Studio
Price: £49.99
Supplier: Empire
Tel: 061 343 7337

MORPHING CRAZY

Recently everyone seemed to be able to morph to images. Why exactly this was so is open to question, but suddenly the ability to transform two images over several steps has become a much sought after feature.

CINEMORPH

GVP's first venture into software brought forth *CineMorph*, which is actually included in the image processing program *ImageFX*. It works by stretching a grid over the two images. The position of the points on the grid form focal points for the image transformation, and when done properly the finished animation is impressive.

Name: CineMorph
Price: £25

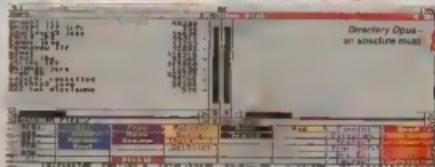

Supplier: Silica
Tel: 081 309 1111

MORPH PLUS

MorphPlus is the rival system from long time Amiga graphics experts ASDG. *MorphPlus* is a set of extra plug-in operators for *The Art Department Professional* and besides morphing (or warping), various other effects (sprint blur, twisting, perspective) are provided with typical *AdPro* control. *ARexx* makes creating complicated processes possible, although the animation support is still a little tricky to get to grips with.

Name: MorphPlus
Price: £139.99
Supplier: Silica
Tel: 081 309 1111

ESSENTIAL ITEMS

The following is a collection of general utilities and programs that CU AMIGA highly recommend. If you intend to work with graphics or video on your Amiga, you'll appreciate the power and flexibility that these programs provide.

IMAGEFX

At last, a true rival for AdPro. ImageFX offers just about everything that AdPro does (load and save images in every file format you can think of, process the image in a zillion ways in between) but does it in a different way. The image is always displayed on-screen, which means you can actually draw on it or specify sections to process. You might prefer this approach, but somehow AdPro has a more stable feel to it.

Name: **ImageFX**
Price: £199
Supplier: Silica
Tel: 081 309 1111

ART DEPARTMENT

The King of Amiga graphics programs has recently been given its most impressive upgrade yet. Out is the familiar grey button-based screen. In is the increasingly common multiple window freeform interface. The same features are here, but support for a multitude of graphics cards has been added. Still the best choice for all sorts of image manipulation.

Name: **Art Department Professional 2.5**
Price: £199.95
Supplier: Men-Edian
Tel: 061 543 3300

With Amiga software such as this, why you too can create professional art.

VIDEO TOASTER

In America, the Video Toaster is the one peripheral that has sold more Amigas than any other. At one point, it was even possible to buy a complete Video Toaster system without knowing there was an Amiga inside. The Toaster is an NTSC-only video manipulation system. It allows just about everything that a professional TV studio or production house could want. From simple video editing to understanding special effects which need dedicated equipment in studios. Inside the Toaster package is Lightwave, the most advanced 3D rendering system the Amiga has ever seen. More powerful than Xposure and far 3D rolled into one. Lightwave has been used in many television programmes to generate everything from snazzy (Star Wars) DS9 to *Spaceballs* (Galaxy 5).

Nowhere are currently in negotiations with several UK companies to establish a distribution network and make the Toaster and its powerful 3D image creation software - Lightwave - available in the UK. CU AMIGA will bring you full details just as soon as they are available.

DIRECTORY OPUS

Possibly one of the most useful Amiga programs ever written, Directory Opus soon becomes a vital part of your Amiga. Not only does it make copying and moving files a lot easier, but you can view images, listen to samples, use archiving tools, set dates and protection flags – in fact, anything you can do from the Shell or Workbench.

Name: **Directory Opus**
Price: £49.95
Supplier: Emerald
Tel: 061 715 8866

VISTA PRO

Vista is a program which can be surprisingly useful for quickly knocking up a few backdrops for genlocking or painting purposes. The 'Lite' version will work in only 2MB of RAM which means even owners of nonexpanded A1200s can experience the joys of tiling/mosaic.

Name: **Vista Pro Lite**
Price: £39.99
Supplier: Emerald
Tel: 061 715 8866

PAINT PROGRAMS

The Amiga is very well served with excellent paint programs. Most borrow heavily from the grand-daddy of them all, *Deluxe Paint*, which is the standard against all others are judged. How do the current batch of programs compare? Would the contenders take to the ring please...

DPaint

Price: £99.95
Supplier: Electronic Arts
Tel: 0753 549442

DPaint was originally the program chosen by Commodore to be included with Amiga – and remained so until recently. Over the years DPaint was upgraded and improved, to the extent that is now both powerful and very user friendly. It is probably one of the best need Amiga applications.

DPaint is a classic Amiga application with menus along the top, tool bar down the right-hand side and a drawing area in the middle. Pressing F10 on the keyboard removes the menu and toolbar allowing you to draw over the entire screen area. Features include all the basic drawing/printing tools you'll need, simple text entry control, flexible block handling (allowing you to cut, paste and delete sections of a picture), and a respectable number of image manipulation facilities letting you resize, rotate, etc. You can also create small animations (dependent upon memory available). DPaint supports all the major Amiga display modes and new enhanced AGA screen mode.

PERSONAL PAINT

Price: £59.95
Supplier: Meridian Distribution
Tel: 081 543 3500

Personal Paint has now replaced DPaint as Commodore's chosen

graphics program and has a very similar

look and feel. Unfortunately, however, it doesn't support the AGA or HAM display resolutions or, for that matter, have any of DPaint's animation capability. The slow loading and saving times, and often confusing user interface may make you wonder why Commodore even considered Personal Paint.

Well it's not all bad. Not only can Personal Paint support different file formats, but it will also work with many third-party video cards (EGS and Pleasure, for example). It also has a number of fine image processing facilities built in and has some impressive printing capabilities such as Postscript printing.

BRILLIANCE

Price: £149.95
Supplier: Meridian Distribution
Tel: 081 543 3500

Whilst DPaint and Personal Paint may be clinging it out, another application, Brilliance, is far in advance.

In the Jan issue of CU AMIGA we compared Brilliance with DPaint and came to the resounding conclusion that Brilliance was the only Amiga graphics package that can take DPaint on and win. Brilliance offers all the tools that DPaint has, but improves most of them.

Brilliance has a vast range of drawing and painting tools, pretty similar block/brush handling, support for the AGA resolutions animation and similar brush effects.

In conclusion, Brilliance is quite simply the best graphics package on the Amiga and extremely deserving of the CU AMIGA 91% we gave it.

CD32 ZONE

The only place for news and reviews on the CD32

NEWS

Te fill or not to fill that is the question. I have quite a lengthy and enjoyable debate with Acid Software's Mark Stiby after the ECTS concerning the amount of space on a CD, and whether a developer really has to fill it to make it value for money. *Tex Willer* this month, for example, which appeared just last week to make it into our review section. The CD32 conversion of the game is a straight port with no added frills such as improved music or the initially proposed texture mapping. The reason? Gametek didn't think that the sales would deserve the amount of work that would have to go into it. Obviously there are five ways of looking at this. From one side, *Frontier* is a great game anyway, so why should it be improved?—especially if the price remains the same on CD. On the other hand, *Frontier* only takes up 650K of the available 650Mb—which means that there is a lot of space left over (some would say wasted). So which way does a developer go? Do they just bung on a few extra audio tracks, or a 15-minute rendered intro, or just stick to producing quality software and hang the size. I honestly don't know, but it's going to be fun finding out.

Tony Dillon
Games Editor

IT'S A MONSTER!

PC owners have been getting more and more excited at the prospect of Cryo's fabulous new adventure game *Lost Eden*. Now CD32 owners can begin to tremble at the prospect of the monster of a game thanks to Virgin, who are releasing the mammoth title escapade in November. Set in a fantasy world where dinosaurs exist alongside humans, you play Adam alone against the dinosaurs which are led by a mammoth T-Rex. Your basic role is to build a citadel to keep the humans in and the dinosaurs out.

As you can see from these PC screenshots, it's an incredible looking game. With breathtaking rendering 3D dinosaurs and scenery, including caverns, forests, deserts and underwater areas, it's certainly one of the most amazing games we've ever come across. Well, have a full preview in a couple of months, but don't worry – we'll keep finding excuses for printing more screenshots. Contact Virgin on 081 960 2255 for more information.

TIME FOR WAR

Software developer *On The Ball* Company is currently working on the Italian CD game to date, *Cyberwar*. It uses the latest graphics technology to create a 3D game. *The Leader* was developed as the firm of the same name. Taking up no less than 120 megabytes, the game looks as though it will be a decent job.

As far as the PC version of

On The Ball Company's version is concerned, it's a CD32 version of the game.

It's a CD32 version of the game.

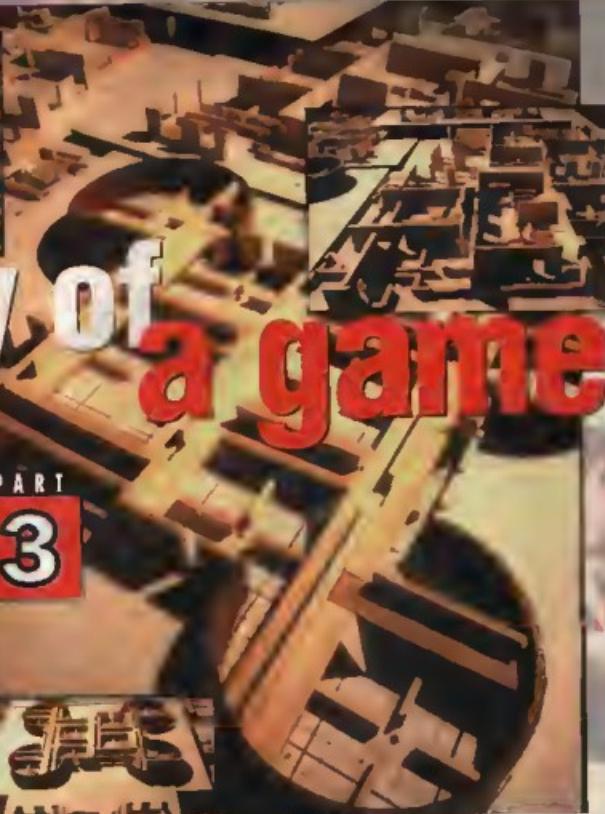

BENEATH A SILVER DISK

Revolution Software are currently putting the finishing touches to their PC CD ROM version of *Beneath A Steel Sky*, one of the best adventures ever released in CU AMIGA's opinion.

• Why are we telling you this? Because it's about to be followed up with a CD32 conversion, which will feature 256 colour graphics, full voice over featuring the talents of a host of Splitting Image artists and an animated version of the *Ice Steel Sky* comic as an introduction. We'll have a full review soon so in the meantime DON'T ruin the fun by reading this issue's solution.

Diary of a game

**Out in Wales,
where men are
men and sheep are
plentiful, two fine,
upstanding mem-
bers of the
community are
coding a game.**

PART

3

The story so far John Jones, Steele and Dave Rowe, otherwise known as the Stellar Genesis Agency are busy creating the ultimate CD32 game. Featuring the kind of features you can only get on CD. The game idea has been developed and accepted by Mindscape, and John picks up the story: "Can four weeks have passed already? It seems that no sooner had I transmitted last month's installments than this onto became due."

"Firstly, for those of you concerning in the story so far, last month there was a reference to an accompanying screenshot of one of the rough mock-ups we are using to speed up development.

"You will have noticed that it did not appear. Hopefully, this month you will be able to see this in all its glory (screengrab, far right). Also to be seen this month is the first view of the look and feel of the final "dressed" (ie complete with textures) room. This shows some of the features we will be using in the game, with realistic shadows from the wall lights and transparent walls (these walls have influenced the way the sprites are accessed - see later in this article).

BEGIN THE BEGIN

As I said at the end of the last article, the full design of the game had now been completed by Mindscape so the real work of producing the

game could start.

Even with the full design ready, John still can't start coding. It's the bane of a programmer's life that they are always waiting around for other people to deliver the goods.

"Before I could start properly on programming the game, the first level's rough art work needed to be completed, along with the skating sprites. This was going to take Dave

about two weeks, so it seemed like a good idea for me to take a break. So I was off to Gran Canaria for two weeks of serious Space Academy research (I you believe that you will believe anything).

"Subsidy refreshed, I was back to the grindstone and off to Dave's for an update on progress. The first thing that had become apparent was how essential the models had been (see the pictures of the models accompanying this article). To produce the rough rooms, we only needed to rotate the model to the correct viewpoint and then the room could be drawn.

"As can be seen from the dressed rooms, the current room can be seen in full, with full lighting and shadows and with the adjoining rooms visible - but with subdued

lighting. As you leave one room and enter the next, the viewpoint switches to the next room by flipping. As long as memory allows, we are hoping that the next room on either side can be cached in memory so as to keep the delay between rooms to a minimum."

CODER'S DREAM

Finally the coding can begin, and this is where the Stellar Genesis Agency have to start putting their talent where their mouths are. Obviously, because the game has been designed by a programmer, the actual coding is already worked out. All John needs to do is get typing.

"With the first 42 rooms, one level's worth, in my possession, the main programming could start. Earlier, I said the sprites were influenced by the graphics. There is one other reason. The finished game will be coming out on both CD32 and

PC CD-ROM. The effects we went to achieve, ie sprites passing behind glass and through shadows can easily be realised on a system with 1 byte per pixel, but to do this on a planar system, as the A1200 and A4000 have, would be very time consuming.

Luckily on the CD32 we have the Chunky-to-Planar hardware that allows fast conversion between PC-style sprites and the normal Amiga video hardware.

The way the effects are achieved is that as a sprite is being plotted to the screen, each pixel is checked to see if it is behind glass or in a region of shadow. If it is then the pixel is modified either darker for the shadow region or lighter if it is behind a glass panel. This effect

occurred in a usual isometric game, the rooms are built up of standard blocks which can then be used for masking off the sprites legs or arms or whatever happens to be behind them.

In the design of Space Academy, we are aiming for a fairly unique look for each room. With Dave busy creating different wall shapes, doorway frames, doors and furniture for each room, this technique will not work.

The answer to the problem has been to store depth masks of each object our hero can get behind along with a mask plane that holds the position of the shadows.

This does mean that there is an enormous amount of data stored for each room, but that is what CD games give us, a huge amount of data space on the disk itself along with more RAM in the console so that the data is readily accessible and does not need to be reloaded from disk each time it is required.

ONE MAN SHOW?

Thinking through this month you could be forgiven for thinking that it's all of a one-man operation at the moment. Not so, as Dave has been working all over in his valley home.

Dave has been producing more frames of the character animation. All soon as the masking works correctly.

"I really, I can't put myself into the game and because the skating characters. He has also been working with the textures we mentioned last time producing various holding brushes and wallpa per brushes ready for the task of completing the fully dressed rooms once all the roughs are finished."

"At this point, I realised that to go between the floor level and the balconies I needed the stairways to be available! We had already decided that all stairs would actually be animated escalators, so Dave beavereed away producing the animations for all views of these moving staircases.

"As I am typing away at this month's update, Dave is on his way over with these animations. This article can now be transmitted up to CU AMIGA's modem and I can get on with the ups and downs of the game!"

And so we leave him at his keyboard for this month and look forward to next month's even more exciting installment!

"With this in place the first problem

should be visible in the screen shot of the 'illy-dressed room.'

GOALPOSTS

When creating a project of this size, development teams have to set milestones for themselves to break the whole thing down into manageable chunks. SGA are no different.

The first programming task, after the usual screen setup, was to programme maps of each room which contained the positions of the walls to allow collision detection. With this done the main character can now move around quite happily bumping into the wall position.

"With this in place the first problem

PD SOFTWARE

The King James Bible on disk. It's the hi-Tech way.

Only £18.00

KJB10-4. THE BIBLE

Do you like gambling but don't have time? Well the Amiga version of roulette will see you right!

Only £2.00

RLT3-1. ROULETTE

You have passed school exams up to your next level of thing - Cybernetix! Is your next level of thing? Superb educational software.

Only £3.00

CYB3-1. CYBERNETIX

A very popular strategy game. Drop rocks on Ork's heads and watch them melt. Settle a very "Bloody" game. Over 18 year old only.

Only £3.00

ORK3-L ORK ATTACK

Handles simulations of 9 different engines including jet engines, steam engines, etc. Drive the vehicle in view exactly what happens inside an engine. Good educational software.

Only £7.00

ENG9-5. ENGINES

Now the nice weather is here it is time to do the gardens and this program will give you an excuse not to because you are too busy to do it yourself. Only £7.00

Only £7.00

GRN3-1. 3D GARDEN DESIGNER

Link up two Amiga's so you can have three (HD, CDROM, Drive set) as if they were connected to your machine. Complete with help file.

Only £7.00

PNT3-3. PARNET SETUP

Pad a night over 200 utilities on one great disk. Includes Virus Checkers, Text Editors, CD ROM, WEB browser, and lots more. All are easy to use.

Only £2.00

TTU3-1. 203 UTILITIES

A 3 disk collection of Extras for the amazing new demo maker includes fonts, make cascades etc.

Order Now £8.00

DME8-3. DEMO MANIAC

Hundreds of colour clip fonts for use in any Amiga application. All are of high quality and are perfect for items making etc.

Only £15.00

CLF15-8. COLOUR FONTS

The complete tutorial to music notation. If you want to know there is no better place to learn than from the computer tutor itself.

Only £8.00

MSG6-3. MUSIC GUIDE

A set of three Amiga Workbench status (sit) with workbench 2.3 utilities.

A bargain at £7.00

WBT7-5. WORKBENCH

Over 1000 Amiga game cheats. Includes Adventure, Action, Strategy, Sports, and much more. All run through an easy to use menu.

Only £7.00

CHT9-5. 1000 CHEATS

An extensive collection of tools for your printer. Includes label makers, date printers, parallel drivers, print managers and lots more.

Only £7.00

PTP8-4. PRINTER TOOLS

Over 100 Workbench printer drivers ranging from Apple LaserJet, Hercules Printers, Commodore Epoxia, CHI 386 & many others. A wide range of drivers. Only £2.00

Only £2.00

DRV3-1. PRINTER DRIVERS

Run PC/AT software on your Amiga. Very easy to use and supports VGA graphics on a humble 41200 pixel screen. A must have package.

Only £2.00

PTB5-2. PC TASK+BOOT

Over 1000 Vocalics in 3-5 disks. Includes 100's of little known secrets.

Only £10.00

GCB3-1. COOK BOOK

An exciting new up to date version of Pacman. If you had the original you'll love this latest version of an all time Amiga classic. I think Order today now.

Only £8.00

SPM3-1. SUPER PACMAN

A complete Word processing package. Includes Spell checker & grammar checker. A very handy use package etc.

Only £7.00

WP7-3. WORD PROCESSING

FREE!!!
FREE BOX OF TEN BLANK DISKS WITH EVERY ORDER OVER £25
Order today in fact for free

Over 1000 PT samples for you to try. Many useful packages including Amiga Utilities, Beagle, Workbench, etc.

Only £7.00

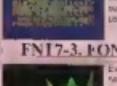

SAM7-5. SAMPLES

Now you can design your own fonts for use in Deluge Paint etc. Over 75 different characters and symbols to choose from. A very easy to use package. Get it now.

Font price only £7.00

FNI7-3. FONT EDITOR

Every Amiga user should have Virus killer. It ensures that you're safe from the 600+ Amiga viruses currently available.

Pack price only £4.00

VIP4-2. VIRUS KILLERS

If you want to see your Amiga fully functioning then you must have Virus killer. It will protect your disk from bad drives, memory sound, joystick, mouse etc.

Only £3.00

TYP3-1. TYPING TUTOR

Perfect for all including children. It's disk contains 150 excellent lectures for you to try yourself.

Pack price £2.00

ENK3-1. ENGINEER'S KIT

Perfect for all including children. It's disk contains 150 excellent lectures for you to try yourself.

Only £2.00

GCB3-1. COOK BOOK

SAMPLE DISKS
E005-6 VOCALS - 3-5 DISKS £10.00

CHUCK ROCK 2 SON OF CHUCK

CORE DESIGN £14.99 OUT NOW

What's Inside

Starts each game with a full baby bottle of energy and when it's empty he loses a life. Simple stuff, but thankfully if you lose one of those precious lives you can just continue where you left off and not have to go back to the beginning. Junior may look as cute as apple pie but you'll notice that he comes complete with a rather hellish club. As you'd imagine, he can give out a fair old bashing with the weapon, but it also serves to protect the tot too. By putting down on the pad you can balance the baby on top of the club thus avoiding certain monsters that can't touch him at this 'other' height. In fact, there are a whole host of controls that are not at first obvious to those of us who prefer to use game joysticks to rest cups of tea on rather than read them. Junior can swing the club high to attack low flying dinos, he can leap on the back of some monsters what'll carry him safely forward and he can even jump on ropes and vines and swing like a veritable Tarzan across the screen.

The graphics are pretty dreamy with six different scenes comprising of scores of varying zones. Junior can interact with some backgrounds by bashing them with the club and move rocks across the screen. This enables the youngster to move boulders over spikes and get over obstacles unharmed. There are quite a few surprises in store for the adventurer, with nice graphical touches including cavemen dressed up in dinosaur suits that disappear as they get hit and huge walking dinosaurs that take up most of the screen.

What with all the different club emics, including a feature that allows Junior to set the club on fire to illuminate parts of a map, there's enough variety to make this quite an attractive romp. The sluggish Amiga cartoon intro has been speeded up to make one of the finest intros ever – the CD32 version finally does justice to the brilliant animation. *Chuck Rock 2* is now a well recommended purchase.

Steve Keen

84%

NAUGHTY ONES

INTERACTIVISION OUT NOW £5.99

Her naughty ones are John and Jim.

In the farcical world of an evil king and the duty of recovering the five worlds and getting them back to their own kind rests squarely on your shoulders. All you have to do is complete the various rooms that hold the heroes prisoner and then you can get back home.

Naughty Ones can be played as a single player

game or you can team up with an equally mischievous buddy for simultaneous two-player fun. Each room consists of a cunning array of platforms, each patrolled by devious demons in various guises. Indistinguishable blobs scoop up and down the platforms whilst more sinister robots and mechanical contraptions have taken over other levels. Each of the five worlds has a different theme. The first, Mad Mechanics, has a mechanical mood to it with deadly cranes, hidden canons and heat seeking missiles standing between you and freedom. One of the more devious worlds is Furious Fire, inhabited by computative pyromaniacs. On the stages you have to extinguish all the beats before they set fire to the level and burn it to the ground.

A platform game without pick-ups just wouldn't be on, so there's an ample armful of objects to collect before you reveal the key to the level's exit. You can pick up bouncing killer shoes to take out baddies with extra lives, immortality and extra speed to name a few. The monsters you encounter will also drop coins when they're killed and it's advisable to pick these up quickly to boost points and progress.

Naughty Ones looks cool enough on the CD32, but the main sprite graphics are pretty small, with some objects almost being missed due to their minuscule rendering. However, the game possesses some nice details such as conveyor belts and lifts to take you further into the game and some track elemental problems such as Rooling. Hidden levels and secret rooms are also included, scattered throughout the five worlds, and you'll notice that as the game moves along it gets harder with the enemy sprites

CHAOS ENGINE

RENEGADE £29.99 OUT NOW

The Bitmap Brothers have been earning quite a bit of late, so too have Renegade, but it wasn't too long ago that these two steely mates were the bane of the Amiga software world. When first released *Chaos Engine* was one of the finest shoot-'em-ups around on any home system and since then has been converted to just about every other format, so it's good to see it coming home to another Commodore machine.

The *Chaos Engine* is a gigantic machine invented to explore time and space – and it's going horribly berserk. The gigantic structure has begun to damage time so badly that human evolution has been altered and the human population has been mutated into various forms of monsters. The only solution is to gather together a team of men to find the machine and blow it to bits. Enter the mercenaries.

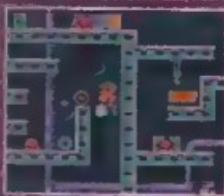

Players can choose between six hardened guns for hire. Each party must consist of two characters, one either computer controlled or manned by a second player. Each of the six warriors has his own specialist skills. The Thug is incredibly powerful, but a little stupid, the Preacher has all the armaments and the ability to heal but he's not too good in a fight, while others, such as the Gentleman, are intelligent and the Mercenary is a good, all-round fighter.

There are four monster-infested worlds to explore,

taking on new abilities and attributes. The second level, *Crazy Clock*, heralds the arrival of baddies that bite back with immortal ghouls that drop objects on you from above as you walk underneath them.

Not the most original game ever seen, Jim and John even look like that more famous duo, Bob and Bob, from *Rainbow Brite*, but a sneaky fun

Bobble/Bubble/Puzzle games, or whatever you want to call them, are still the most popular type of game on the Amiga. In fact the whole game has a Bobble/Bubble/Rambow Islands feel to it and, unless there are any secret plans to release those Amiga classics on the CD32 that we don't know about, this will more than make up for their absence.

Young players will like the challenge, but older ones might want a bit more tech to go with their speech.

302

each with four sub-levels. What makes *Chain Engine* so intriguing though is its artificial intelligence. Each level is suffused with different paths so that even when a world is completed you can go back and discover new avenues to follow. By picking up different coloured keys you can move parts of the scenery to find hidden rooms and weapons or by activating the various nodes. In different orders you can reveal other levels. Whereas most monsters are killed they throw up all kinds of surprises like weapons or special gadgets of destruction, allowing each player to have his abilities tested up

With improved graphics, a cool intro and brilliant sampled CD speech Chaos Engine more than stands tall on the CD32, in fact I'd say it's one of the best games you can buy on the machine. A classic shoot 'em up that's even better on the CD32. Definitely not one to be missed but I hope that the team are working on some spectacular CD32 specific products – they'll be Christmas!

**Steve
Keen**

GUNSHIP 2000

MICROPROSE OUT NOW £29.99

Gunship 2000 is regarded by many as one of the best Amiga flight simulators. It's not actually the best. The one thing it had above all others was a realistic undulating terrain instead of taking a flat green landscape and just adding the odd pyramid. Gunship 2000 has a real terrain that you can properly interact with, hugging the hills, following valleys and generally flying the game the way it was meant to be flown. Coming from MicroProse, it goes without saying that the game is realistic, and a superb simulation, but Gunship 2000 has much, much more than normal flight stuff later.

Now it's available for the CD32, and boy are you lucky CD owners in a treat. MicroPhase have taken the Amiga version and enhanced it beyond all expectations. For a start there's the wonderful intro sequence where an AH 64 Apache chopper flies low over a lake and then goes into battle along a valley. There's improved sound and music. There's the 256 colour graphics. There's increased speed and even a much smoother update.

Best of all, though, are the controls. On Amiga, *Gunship 2000* used all sorts of key commands to do everything. On CD32, only the important functions are kept on the joystick with all weapons, power settings and navigation controls at your fingertips. Secondary actions, such as changing your view of the game and examining the map, are brought up on a menu when the game is paused. If you thought a flight simulator couldn't work on a console, then think again.

Gunship 2000 deserves to be one of the big CD32 sellers. It's got stacks of action, plenty of visuals, more explosions than you actually need, and you can machine gun camels. What more do you need?

Tony Dillon

920

Up in the air with my flying machine.

SUBMARINES, GHOSTS, GUNS and MUSIC!

It's all action this month, three movies to watch and the first FMV pop video should be available by the time you read this. The movies on show this issue are *The Hunt for Red October*, *Ghost*, *Naked Gun Two and A Half* and the first music FMV title – *Eurythmics, Greatest Hits*.

This month sees the release of a film Alan's is just itching to get his hands on – yes *Ghost* has finally floated in. Quite why Alan wants to watch this timeless tear-jerking romantic drama is beyond me – maybe something to do with an unhealthy admiration of Patrick Swayze (heck he even knows how to spell his name!). Anyway, *Ghost* is a classic film, loved by practically

SOUNDS ALL RIGHT

If you've got the CD32 and an FMV module and all you have is a pop video then you're missing out on some amazing sounding experiences.

On the back of the CD32 are two phone jacks. Using standard phone cables connect these to your stereo via either a spare input connector or the jack in your CD player – remember the CD32 has CD-quality audio!

Next time you watch an FMV film or play a game, turn up the stereo and listen to the sound coming through, raise your stereo is amplifying the same will enhance the FMV film experience even more.

every woman I know... and more than a few men will admit to enjoying it – when pushed that is. As such this

Naked Gun Two And A Half - Total Disaster! Video Quality!

The Hunt for Red October

should then be allowed, it's time for some humour and why not! *Naked Gun Two And A Hat* is fast-paced, slapstick comedy along the same lines as *Airplane* and *Police Squad*. The film follows the antics of Frank Drebin as he stumbles his way through another investigation. If you find *Police Squad* monotonous enjoyable you'll love this.

It's laughs a minute with this film, and unfortunately for all the wrong reasons. Sadly, *Naked Gun* has suffered very badly in the transition from master tape to FMV format – it's the worse I've seen yet, apart from very early promotional titles. The picture blurs regularly, with a definite fuzziness throughout the film and there was also a loss of detail in several frames. Unless you're a diehard Frank Drebin fan, avoid this one.

DIVE, DIVE, DIVE!

The next film is one of my all time favourites, an absolute no roasting semi-political action drama. Originally released as the real East/West cold war was coming to an end, *The Hunt for Red October* charts the activities of a Russian captain trying out Russia's newest and most deadly submarine. But instead of following orders he has his own plans and creates more than a few waves between Nato and the Warsaw pack in the process. A strong plot, with the acting starring Sean Connery and Alec Baldwin adding to a powerful atmosphere set both below and above the waves!

Like *Ghost* the conversion quality of *Red October* is well up to scratch. The sound in this film was particularly better than from my VHS video version, and came out wonderfully through my Denon surround sound system (see box out). The visuals were also more than up to recent levels and showed none of the fizz that can be seen in early FMV films.

HE'S BACK – JUST ACCEPT IT!

After overdosing on emotion with *Ghost*, and *The Hunt for Red October*, getting more politi-

SWEET SOUNDS

When Commodore first unveiled the FMV card for the CD32 one of their biggest claims was that there would be a load of video CDs from the world of music. So far however, there haven't been that many, zero to be precise, but now the first is about to arrive and it is a fine example of what is coming.

Eurythmics, Greatest Hits, like the films reviewed a double CD. As you would expect it features both the audio and video tracks to many of their best tracks, including *Sex Crime*, *There Must Be An Angel*, *It's All Right* (*baby's* coming back), *The King and Queen of America*, and *Would I Lie to You*. There are 22 songs on the two CDs and added to this is a *Eurythmics* discography. The last track is a collection of still frames (why only still frames?) showing their previous work.

BMG, the record company behind it, are also working on several other FMV titles, although no details were available at the time of writing. However BMG are one of the UK's largest record companies and represent other major artists like Lisa Stansfield and Whitney Houston so we should hopefully see some big releases in future.

Typical of the music business, which always tries to charge as much as possible, music CDs will be priced at £19.99, rather than the £15.99 that the films are being sold for. ☐

Viper 68030 Turbo

Amiga 1200 accelerator board

£159

Standard (no FPU)

The amazing Viper 030 board is a feature packed accelerator card which outclasses the equivalent competitors 030 boards at a fraction of the cost.

The Viper will give an amazing 440% overall speed improvement over your Amiga 1200, making it even faster than an Amiga 4000/030! Some processor operations have speed increases in excess of fifteen times.

Some floating point operations are an incredible sixty seven times quicker, faster than an Amiga 4000/040!

Viper Features

- Full 030 with MMU running at 28MHz
- FPU running up to 50MHz
- Industry standard 72 pin SIMMS
- RAM, upgradable to 128MB using 1, 2, 4, 8, 16, 32, 64 or 128MB SIMMS
- Full kickstart remapping (FASTROM option)

- Optional SCSI-II adaptor
- 68882 maths co-processors
- On-board battery backed clock
- Faster than an Amiga 4000/030
- Supports instruction + data burst
- 50% cheaper than competition

A CU Screen Star is for games worthy of 80% or more of the marks. It has to be of testing quality and you can rest assured that, if you decide to purchase it, you won't be wasting your money.

82% and a game's worth a Superstar! We heartily throw them around, but if a game gets one it'll be completely outstanding.

Their hair is clean.
Their nails have been manicured.
Their shoes have been polished and their shirts care-

fully pressed. First Impressions can be so important, don't you think?

FIRST

SUPERSTARDUST

TEAM 17

THE GAMEPLAY: Take Asteroids, add a bit of Asteroids and for good measure top up with generous dollop of Asteroids. All survivalistically take the previous game Stardust and add some more Asteroids. If you think you could be overdoing it slightly with the Asteroids than add in stunning 3D tunnel sequence for variety.

WHAT'S NEW: Not a lot since the previous game. This is essentially an upgrade of the standard chipper game released through Duse Marketing late last year.

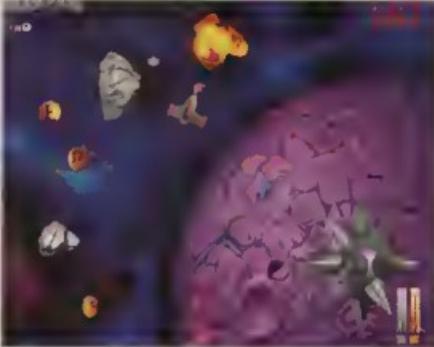

Gorgeous 256 colour graphics, more ray-traced chunks of rock than you could shake a stick at, and the tunnel sequences have been greatly improved.

BEHIND THE SCENES: Bloodhouse - Finnish company, are the team responsible, with their only other release to date being Stardust itself. Don't worry, though. These clever Finns aren't a single dimension enterprise. They've got plenty of other games to come, and they aren't all based on Asteroids!

FIRST IMPRESSIONS: We loved the first game, so of course we are going to be a little biased towards this one. Provided they don't change

the playability of the original too much (although it could be slightly easier?) then this is a sure fire hit.

An istby trigger finger is just what's needed to play Superstardust. And Tony Clinton? He's a trichy all over

ELFMANIA

RENEGADE

THE GAMEPLAY: Elfmania is a beat 'em up to end all others. A lot king has taken over the land by force, and you have to hire combattlers to go in and rescue the luf that's rightfully yours. Every fight you win marks a cross on the board that is

TIMPRESSIONS

THE GAMEPLAY Naturally a large part of the gameplay is actually Sensible Soccer, upgraded and updated, but this time around there is a hell of a lot more to see. How about every team and every player? In every league there is? Pick a continent, pick a country and pick a division - all your favourite teams are there.

WHAT'S NEW? The number of teams in the game. There are games around that allow you to tackle leagues and cups like Sensible World Of Soccer does, but there aren't many that let you do it with African Second Division teams! All the stats are correct and

the world and when you get five in a line you win! You only have a limited amount of cash, so being frugal at the start means you can splash out on the really big battles.

WHAT'S NEW? The Connect 4 idea. For the first time, we have a beat em' up that isn't completely mindless. Instead of just having to work your way through a dozen very similar scenarios, you have to play a more strategic game, adding a whole new dimension to the art of gaming.

BEHIND THE SCENES: The whole game has been masterminded by Steven Fawcett. That might not seem like a new name to computer game fans, but some of the biggest names in the business, particularly when it comes to the X Spectrum,

even the colours of the players heads and hair is right. How do they get so much detail in there?

BEHIND THE SCENES: If you can't guess from the title, then you shouldn't be reading this magazine. Of course it's all been coded by Sensible Software. Who else keeps turning out games with very small characters? OK, DMA Designs.

FIRST IMPRESSIONS: If I said I looked anything else but wonderful, then I'd get lynched. It's Sensible Soccer so you can't really go wrong with that, and it's been cranked up to a new level. It will go to number one and stay there for a year, as usual

Welcome to the Amiga, Stav

FIRST IMPRESSIONS: The game is in quite a playable state at the moment, being only a month from review so you can easily say it's a great game. An excellently coded product, it's almost guaranteed to fly off the shelves as soon as it hits them

Take that you brat!

RUFF N' TUMBLE

RENEGADE

Isn't completely original!

BEHIND THE SCENES: The game is being coded by Jason Perkins, who you will know from his previous work on Apocalypse.

FIRST IMPRESSIONS: As I've said, it doesn't come across as entirely original, but it's playable enough and looks good enough to appeal to a wide section of gamers. At the moment there are a few playability bugs to be sorted out, but once they're done I'm sure it will be

Above: Lots of roughness, but no-one seems to be winning

SIMON THE SORCERER 2

- the Lion, the Wizard & the Wardrobe

Simon The Sorcerer is preparing to make his big return. To some, it might seem like he has never been away, but since the first game was finished the boys and girls at Adventuresoft have been beavering away like mad to create the ultimate graphic adventure. There are those who may think that Simon stands up quite easily against anything other programming teams have to show. But be prepared to be amazed. Simon The Sorcerer 2 - the lion the wizard and the wardrobe really does look like it's going to be a whole lot better.

"We've really gone to town," proclaims Mike Woodroffe, beaming from ear to ear.

"We've got seven full-time artists now, after sifting through over 300 applicants from one advertisement. It's surprising how you can work through so much high quality art, and end up with a shortlist of 20 to 40 artists, and then find out just how many can make the jump to computer art. One bloke came in for a test, and walked out in an hour! He did superb artwork, but couldn't hack it on a machine."

FRUITY IMAGES

Take a look around this page, and you'll see the fruit of these seven graphic artists. Although the game is easily recognisable as the sequel to the original, the actual quality of the art is stress ahead.

"The artists started work on the

With the CD32 version of Simon The Sorcerer out of the door, Adventuresoft gets stuck into his second escapade. Tony Dillon discovers that things are looking better than ever in wizard world.

WIP

Just looking at the screenshots on this page should give you some idea as to how good Simon 2 is.

first of September, says Mike, pulling out a date-stamped disk from a drawer full of identical disks. 84 identical development disks in fact. So what's the plot for the new

game? Well, essentially, the evil wizard, Sordi, who Simon managed to kill at the end of the first game, has returned - albeit as a ghost, and he wants to wreak revenge upon the

young boy who caused him so much trouble. To do this, he has created a magic time traveling wardrobe, which will pick Simon up and transport him to the evil wizard. Unfortunately,

YOU'VE BEEN FRAMED

Waaaaah me, look this someone is in a real hurry. Just look at that rhythmic walk. The animation is really superb in *Simon 2*. The above frames are just a small selection from thousands of frames.

something goes wrong, and Simon is dumped outside a shop belonging to the good wizard Calypso and hilarious consequences follow.

SLOW DOWN VAMPY

The puzzles in *Simon 2* look far more complex than its predecessor - there is no way Vampyra is going to solve this one in a day. For example, when Simon arrives outside Calypso's shop in the Wardrobe, Calypso tells him that he'll need to get some Minuscade to generate the 121 Gigawatts of power needed to get the wardrobe going again. To get some of the Minuscade you have to get into the Royal Castle. The King is looking for a new magician, so he

A scene from the introduction, as Sardis executes his evil plan to hurt his apprentices

holds a competition. When you arrive there are all these crusty old wizards, and there's no way Simon could compete against these guys with their heavy-duty magic. So the only way to win is to cheat. He goes to the Street Of Traders, and buys a Do-It-Yourself stink bomb kit. Then he has to get some swamp stew from the Swamping巫 in the meantime, has gone upmarket and opened a chain of restaurants called McSwamplings and doesn't make stew anymore. At this point things start getting really complicated, and without wimpering I give too much of the game away. A Swamping costume is made, the stink bomb is set off, various things are done to various people, and then... well, you'll have to wait and see.

FAMILIAR FACES

Once again, Simon Woodfille, the author of the *Simon* games, has borrowed copious amounts from popular fiction throughout the script. "Simon does this a lot," explains producer father Mike. "If you read through our games, you'll find quotes from all over the place. People like things they're familiar with. This is why *Simon 1* has been so successful. They know the story of the Three Billy Goats' Gruff. They knew the story of Rapunzel. It all works for them. It's familiar ground."

There's no shortage of familiar faces in *Simon 2*. Just in case you were wondering, Most will have already got the connection with the title (a tip of the hat to C.S Lewis) and quite a few will have got the *Back To The Future* storyline, but there is much more to it than that. The Three Bears make an appearance in this game, but in this case Goldilocks is a persistent efferend, and as a result the Bear's cottage is like a fortress - they are so fed up with Goldilocks coming in and raiding it. *The Lady Of The Lake* makes her own waves in the game, dressed in a wet suit and oxygen tank. You will need to get past her, but she won't let you until she sees the royal seal, which is true *Simon* tradition will actually be a seal - the kind that do tricks with balls and catch fish!

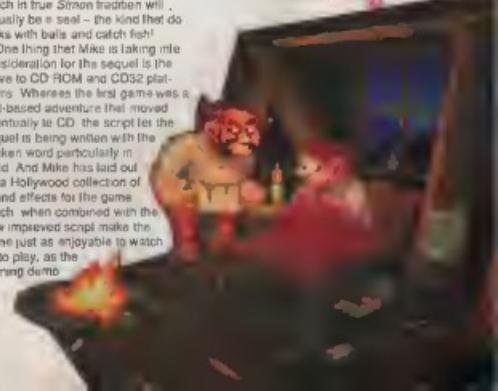

One thing that Mike is taking into consideration for the sequel is the move to CD ROM and CD32 platforms. Whereas the first game was a text-based adventure that moved eventually to CD, the script for the sequel is being written with the spoken word particularly in mind. And Mike has laid out for a Hollywood collection of sound effects for the game which when combined with the new improved script make the game just as enjoyable to watch as to play, as the running demo

Top left: The Street Of Traders.

Top right: McSwamplings - the Swampling's new home

Adventuresoft showed at the ECTS proved. The inclusion of sound effects will also be a welcome relief for fans of the original game who only had the choice of music or silence. Mike has listened very carefully to criticisms and praise for the original game, and is confident that *Simon 2* will be the first graphic adventure to get it completely right.

The game should appear somewhere towards the end of September, so don't hold your breath for it. We'll have a full review as soon as we can, but until then, just check out the screenshots.

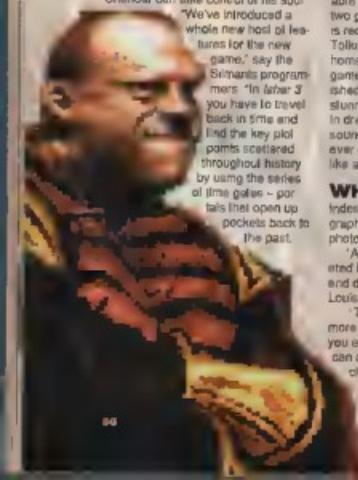

ISHAR 3

WIP

June and although French programmers Srimans are constantly updating the code, they are confident that it'll keep its projected release date. The plot for the third adventure goes like this. The evil wizard Shendar, from Ishar 2 has made a surprising comeback. His plan is to reincarnate himself in another form, as the search is on for another body. Putting all the stops the mad wizard decides to come back as a gigantic, 2,000 year old winged dragon, named Wohatex. The creature is immortal and the last remaining member of the Black Dragon race. So it's down to you to destroy the immortal dragon before Shendar can take control of his soul.

"We've introduced a whole new host of features for the new game," say the Srimans programmers. "In 'Ishar 3' you have to travel back in time and find the key plot points scattered throughout history by using the series of time gates - perhaps back to the past.

Daze software is fast becoming one of the largest RPG adventure specialists in Europe. Steve Keen gets the latest chat, straight from the intercontinental fax, on their latest spectacular creation.

Ishar 3 is set to hit our shores in exactly the right place at the right time, whenever that time may be. In fact, time seems to be a key factor in the entire Srimans production schedule. The programmers have been beavering away on Ishar 3 for over a year now, but it looks like it's been worth the wait.

"The AGA version features gorgeous 256 colour graphics, enhanced sound effects and faster gameplay than just about any other RPG around," continues Louis Marie, head of the company's production team. "The CD32 version will feature all the AGA enhancements plus animated film sequences that we've yet to announce. All the action in Ishar 3 is in first person 3D and the graphics have even more depth and remarkable atmospheres than the previous two games. What we've tried to do is recreate the feeling of Tolkein-esque adventures on the home computer and produce a game of exceptionally highly polished artistry of the art-visuals with a stunning plot. For us, Ishar 3 is rich in dream-like images, colour and sound and is the closest anyone has ever come to producing a Tolkein-like adventure on computer."

WHAT A PICTURE!

Indeed, Ishar 3 features incredible graphics with the added novelty of photo-realistic characters.

"All the characters have been created by photographing real people and digitising them into the game," Louis explains.

This gives the game an even more realistic feel and serves to draw you even further into the plot. You can create your own characters and choose their appearance from a series of French models,

GETTING AROUND TOWN

Ishar 3 is totally mouse driven and all the action takes place with the traditional point and click interface. From first impressions the style and feel of the game are in a class of their own and, with its varied sub-plots, Ishar 3 is definitely not as straightforward as other RPGs. Marie adds:

"Linear is not a word you could use to describe Ishar 3. There are always different routes to take and alternate avenues to follow."

Although Srimans have put Humungous efforts into Ishar 3 they deserve the title of 'Most Technically Advanced Game' that they've produced for the soon-to-be-released Robinson's Request. However, Ishar 3 is looking stunning and is definitely one of the most eagerly awaited adventures we've seen for a long time.

Louis Marie concludes: "Ishar 3 is an extravaganza of an RPG with undoubtedly the finest graphics and the best plot we've come up with yet. Fans of the previous two games will not be disappointed."

And we're certainly not about to argue with him. For now.

ISHAK

3

THE SEVEN GATES OF INFINITY

Remember...
So many battles...
of the peace that was so hard fought for, is short lived...
The shadow of Chaos is cast anew on the walls of the citadels...
A journey through the gates of time itself, in pursuit of the dragon of Sith,
the last survivor of the Great Black Dragons...
The third installment in the saga of the Kingdom of Arborea, Ishak 3 journeys once more into the universe of the RPG, with its strange worlds, mythical adventures, imaginary creatures - possibilities of creating and reusing the characters from past adventures.

You may not have heard much about them yet, but by the end of this summer they will be the name on everyone's lips. Let me introduce you to Vulcan Software.

The Portsmouth-based trio of Terry Carrington, Paul Gammon and Lisa Tunnah are extremely excited. Towards the end of last year they came together as a brand new software house, called Vulcan Software, with the aim of righting wrongs, fighting injustice and showing the world just what the Amiga is capable of. Three months into production of their first game, co-creator Paul is sitting in the bath when he ones this proverbial Eureka! and runs screaming to his keyboard. And so, Valhalla was born - the game that looks likely to revolutionise adventure games.

Valhalla is the tale of a sweet young fellow who has returned to his homeland to stake his claim for the throne which is rightfully his. Before he can do this, though, he has to work his way through an enormous tower, puzzle solving all the way, battling past guardians, pits, spikes, traps and just about anything else you can think of. Still, he's a resourceful young fellow and with a little luck and ingenuity he will succeed at this most impossible of quests. Oh, by the way, this is where you come in.

LOOKING UP

Playing the game at this early stage, things are looking quite

TALKING ABOUT THE FUTURE

amazing. Ignoring the typical side-on view favoured by the likes of LucasArts, Valhalla plays from a top-down perspective, so you watch the player from above as he smoothly walks through the castle. His hair swings with every step. See him get trapped by a spike? See him fall down a pit? Chuckle as he looks up at you and says in a clear voice 'I'm scared'.

What? Didn't tell you he could speak? It's true, I say. Valhalla is the first ever talking adventure to run off floppy disks. Four decks of samples provide you with scintillating conversation and amazing insights into the working of the castle as you trundle around fixing injustices. Why else did you think Paul cried 'Enrica? Okay' as CD owners might not be immensely impressed, but the entire CU AMIGA Team was when the disk appeared in the post.

The intention is to give you a character to play with, one you can identify with and enjoy controlling. There is little text in the game, and the simple control method (five

icons, including the save and load menu) means that players will be able to concentrate on the game without worrying about mousing anything or not using anything in the correct way. If you try, the little guy on screen will look up at you with those imploring eyes and say 'can I do that'.

SPEAK CLEARLY

Vulcan are convinced that this is the way forward for adventure games and playing the test level of this five-level game, I'm inclined to agree. Obviously, the samples aren't as clear as a CD adventure, and they are limited to a couple of seconds at a time, but they do add to the gameplay a lot, even the early on.

The one concern that Vulcan did have was that there was to be no disk swapping at all - something they have succeeded at. You switch disks between levels, but that's as far as it goes. Rummaging from floppy well, there's a slight lag between selecting an option and hearing the speech but as this will be less than a second, there is no danger of floppy users losing out.

With some very clever programming and recording techniques, Vulcan Software have come up with a ground-breaking piece of software. As I speak, the game is about three weeks from completion - quite a feat considering it's only nine weeks old at time of writing. Quite why the game has developed so quickly is a little hard to pin down, but it could just be that Vulcan Software are a

very dedicated and enthusiastic bunch, who love great games and are in love with this one. Or perhaps because the team only comprises three people, the waiting time for all the different elements of the game, such as sound, graphics and so on is dramatically reduced because there are fewer channels for all the components to go through.

Valhalla should be released on all Amiga formats within the next month, with hopefully a CD32 conversion a little later down the line. Until then you can dribble over these screenshots and wait for the full review next issue.

ED

Infinity

FROM HIS BLACK HELM
HE SUMMONED THE GUN
WITHIN HER OFFSPRING
HE BURIED THEM
TO PROTECT THE SACRED
OF INFINITY
ALTHOUGH THE
CRUMPLED ALL

Matt Broughton
stumbles and
sometimes falls,
but by god does he
know how to
wallop those balls.
What a tremen-
dous effort!

Football eh? A game of champions. What a platform for modern heroes. What a good way to get your head kicked in. Yes, we all love a good kick around down here at CU AMIGA HQ, and it's a good job too. Why? Read on.

Anyone who even half reads any of the popular Amiga games magazines should already be more than slightly aware that we're about to be set upon by a large huddle of likely games. (Incidentally, if anybody thinks they know the correct collective noun for footy games, please feel free to write in to us on a post card — just don't be surprised if we burn it immediately.) What you might not be aware of though, is that US Gold is the only company to have the official World Cup licence, and as a result will be producing what promises to be a real stonker.

The preview material for World

WORLD CUP USA '94

Cup USA '94 is a hefty old bundle and features Sir Ian the World Cup s'hascot very heavily indeed. As to the facts of their compatriots, US Gold have swapped the footballing dog just about everywhere and have animated him, and I quote, in a light-hearted and humorous way to show off his ball control and lead the player through the dangerous options. If he's dawdling around with me ball at every possible moment. From this point on it's options a'ay and it's as good as guaranteed you'll be playing the game exactly as you want it.

If Mr Perfection is your middle name (like Tony Dillon or is that Mr Plonker?) then you'll be well satisfied by this package, as set piece practice is probably the most impressive option here. The player is able to rehearse just about any aspect of the game, including kick offs, corner kicks, throw ins, free kicks and penalties — you can even decide whether you want to play as the shooter or the goalie during penalty practices.

With each of the game's training options you will be able to play either against a second player, the computer, or just an empty pitch (and if you've seen some of my last you'd be forgiven for wondering if I could score even then!).

All of the qualifying teams are included in the game, but patriotic folk (i.e. those genuinely upset by the fact that the British team was too sad to compete) will be glad to know that a special 'sad donkeys step this way' option has been included to allow you to play as any national team you fancy. This is done by editing the teams that are actually supplied, and yes, this even includes the sad bunch of neets that is the England squad (I'm not forgetful was under Graham Taylor at the time!).

More standard options are at your finger tips too, allowing you to affect the players' speed, the balls' glue factor (Well, Graham Taylor could be described as a bit of a Pint Stuck), as well as the pitch type, and weather. You'll also be able to switch the off-side and back pass rules on and off.

As far as individual teams go you can not only change their appearance using the strip editor, but can also use the formation editor to either modify formations, or to set up your own from scratch, allocating set zones to each player.

World Cup '94 hopes to inject atmosphere throughout, using a number of graphical drop-ins showing refs' faces, cards issued, etc., as the game progresses, and after each game you'll also be able to enter a debriefing screen which will show both teams' overall performances and various items of statistical data.

Though we stand to see many, many footy games before the year's out, World Cup '94 promises to be a game to be reckoned with. But then again, don't they all? Turn to for a full review next month (hopefully). **CU**

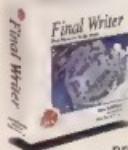

Put Your Finger on the Buttons
of the 'Very Best Amiga Word
Processor' available...

NEW Final WriterTM Release 2

We may claim... 'Final Writer is the Very Best Amiga Word Processor available', but don't just take our word for it. Magazine reviews of word processors in the UK and worldwide have bestowed higher marks and more awards on Final Writer than any other! We don't need to say we're 'Number One'. **Others do it for us!**

And, remember... right from the day of launch, our software works First Time Every Time!

Final Writer Release 2 has a range of NEW features & enhancements including ..

Undo/Redo 'faulistic' and aid to experimentation

Paragraph Strips - user definable font/style info for individual documents

'Easy Select' Plain Bold, Italic and Underline buttons

Finaling Palettes - user definable in tools, user buttons, paragraph styles on individual documents

Redesigned Layout Menu

User Button Strips - can be saved for each document

Ruler/Paragraph Strips can now 'switched' on/off

Faster Drawing Tools for even better performance

Now you can use Software this Powerful on your Amiga

Final Writer... for the author who needs even more! If you already use an Amiga Word Processor, it won't include the complete and comprehensive array of features found in this latest addition to the SoftWood family.

Can your Word Processor...

Output crisp PostScript™ font outlines on any graphic printer (not just expensive lasers), and was it supplied with over 110 typefaces? Import, scale, crop, view on screen and output structured EPS clip-art images (Final Writer is supplied with a hundred), again, on any printer? Also create structured graphics and move them along with text at any angle, giving you DTP quality presentation? Provide a huge range of printing options (eg. scaling, thumbnails, crop marks etc. on PostScript™ printers) and fulfill other advanced Word Processing functions such as automatic indexing, table of contents, table of illustrations and bibliography generation? With Final Writer this is now available to you along with a host of features that just goes on and on. We know that you'll be impressed by this revolution in

typefaces? Import, scale, crop, view on screen and output structured EPS clip-art images (Final Writer is supplied with a hundred), again, on any printer? Also create structured graphics and move them along with text at any angle, giving you DTP quality presentation? Provide a huge range of printing options (eg. scaling, thumbnails, crop marks etc. on PostScript™ printers) and fulfill other advanced Word Processing functions such as automatic indexing, table of contents, table of illustrations and bibliography generation? With Final Writer this is now available to you along with a host of features that just goes on and on. We know that you'll be impressed by this revolution in

Amiga Word Processing, but don't be put off by its advanced capabilities. With its complement of user definable Command Buttons and SuperHelp Manual, Final Writer is simply one of the easiest programs to learn and use.

Final Writer is not just a one-off product...

SoftWood are acknowledged as the World's leading software company publishing for the Amiga and no other system. So, if Final Writer exceeds your current requirements - whatever your Document Processing needs, whatever your Amiga SoftWood will still have the Perfect Package for you.

Pen Pal or Final Copy II and Proper Grammar II...a Complete Range.

Once you become a registered SoftWood user, you'll gain access to unlimited free UK technical support (others often charge you or don't provide support at all) and preferential upgrades to future versions of these and other exciting new products being developed right now.

SoftWood

Quality software for your Amiga

SoftWood Products Europe

...to produce Documents this Good...

...without having to buy an expensive PC or Macintosh™, high priced Colour PostScript™ Laser and complex, costly DTP Package

Now you don't have to search through PC and Apple™ Macintosh™ software catalogues to find a quality Word Processor/Publisher that performs as well as this.

And... even if you did, you probably wouldn't find a program that combines the very best in Word Processing and... easy to use integrated Desktop Publishing type facilities.

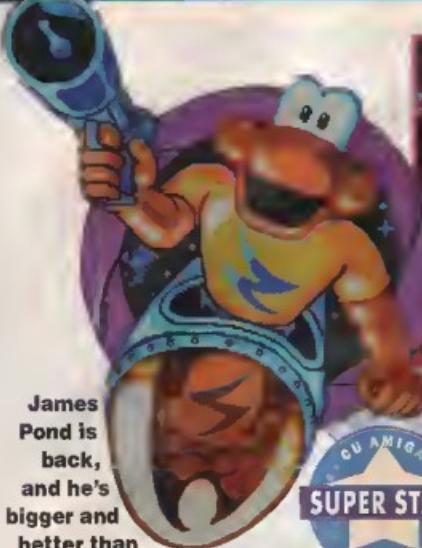

You certainly won't find Word Processing Software for your Amiga that's as capable as this!

If you've outgrown your existing package ask about our 'trade up' options from your current Word Processor (other publishers' WP's are eligible too) and preferential upgrade prices for registered SoftWood product users.

Please send my detailed copy of the new Final Writer & Final Copy II Information Pack, including samples from popular printers, and a free of charge Amiga CD-ROM. Use the coupon on page 0773 836781 (0773 831040)

Name & Address

cua

James Pond is back, and he's bigger and better than

ever. Tony Dillon can't swim, but we stuck him in the fish tank anyway. And surprise, surprise. He floats!

OPERATION STARFISH

Ask anyone to name one of the most influential Amiga platform games ever, and they'll inevitably mention James Pond in one of his previous incarnations. Taking what made certain console games the huge sellers they are and making them better is what made *RoboCod* the smash hit it was, and I'm pleased to be able to announce that in the sequel to the sequel, Millennium have gone even further. If you only ever

buy two platform games for your A1200, this is one of them. (*Bubble 'N' Squeak* is the other, but you don't need me to tell you that.)

If you're expecting another *RoboCod* though, even, then prepare to be shocked. *Operation*

(Left, top) Pier 1st main part, James will spend most of this time collecting mesons. (Left, bottom) The net or ear-level is a transmitter which has to be destroyed.

James' super Gravity Boots allow him to stick to any surface – even if it's been thoroughly splattered down! This makes for some very strongly designed levels!

Just because you don't see anything, it doesn't mean that there's nothing there. There are hidden blocks and switches all over the level, and sometimes just jumping through the right strata can reveal a plethora of moons or a new way across the level.

Starfish couldn't be further from that original smash. *RoboCod* was far more in tune with Mario than this game, which features more than a tip of the hat to *Sonic The Hedgehog*. It

only down to the intense speeds this runs at. However, before I get all excited over the game itself, how about a bit of the plot to get you really moving?

LAIR OF THE MUSH-BEAST

HELLO PUSSY-CATFISH

Doctor Maybe, the ever-present enemy of F.I.S.H., has been keeping quite a low profile lately, ever since being defeated at the end of Robocod.

Agents were pulled on his tail after the battle at the Toy factory, but he soon slipped surveillance.

The next thing of any importance to happen was the disappearance of a NASA Space shuttle. Maybe held a secret meeting in the desert, from which a large flash was seen streaking heavenward.

Only one conclusion can be drawn—Maybe has taken the shuttle and set up a base on the moon! What else can F.I.S.H. do but send their top undercover agent to that large ball of cheese in the sky to track down Maybe and close down his operations for good.

In true secret intelligence style, Pond has been decked out with all the latest equipment, such as boots that allow him to move without the discomfort of reduced gravity and micro-sized breathing apparatus that let him run around freely in an airless environment.

As always there are dozens of items left lying around for him to pick up and use to his advantage,

provided you can figure out where to use them.

SHAKEN NOT STIRRED

You don't need me to tell you that Operation Starfish is a platform game, but what a platform game it is! Easily the biggest seen on the Amiga, there are over a 110 levels to

play around with, and each one is absolutely huge, easily 20 to 30 screens long and who knows how many high? You'll find almost no similarity between them either. It's not as if you can work out a strategy for completing levels like you could with Robocod. The only thing that remains the same about each level is the fact that you start at one end and somewhere near the other and is a transmitter that needs to be activated by collecting a secret number of McDonalds, and then destroyed with a single punch.

The whole thing is held together with an enormous map which, in true console fashion, grows as you work through it. At the beginning, there is only a small section and a single level displayed. Completes the level and the path to the next one is shown. Interestingly enough, only part of the 110 levels in the game need to be completed to reach the end. Depending on how

much of a level you complete when you reach the end—for example, if you only collect the bare minimum of lemons to activate the transmitter instead of all the lemons on the level—then more than one path can be displayed. Depending on how you play, there are literally dozens of ways to work through the game and the only levels you need visit twice are the very early ones.

As I've already said, this game takes a lot more from, say, Sonic than it does Mario. Sure, there are still lots of hidden blocks to head-butting against, and there are plenty of enemy sprites to leap upon and destroy with your feet, but the whole thing is considerably faster than the last game. In Robocod he rolled along at a leisurely pace most of the time, occasionally building up speed when he came down a slope. In Operation Starfish Jameson has a

gearbox. You start the game in 'walk' mode, where he moves around at a controllable rate but can't climb the sides of mountains.

Pressing the

space bar takes him into 'run' mode, where no surface is too sheer, even hanging upside down.

Yes, Pond's boots create a field of gravity, but they do it on any surface, not necessarily the one that forms the crux of the moon.

Remember, this time Pond isn't racing around inside a conveniently-designed building. This is the moon we are talking about, and you couldn't hope for a more uneven surface to run around on. Still unless you actually jump, Pond sticks firmly to the ground he's walking on, and as a result a cut can often end up running upside down, up the side of a wall and even round and round a single block if you aren't careful.

All this has made for some very clever level design, and Chris Sorrell stands to be heartily congratulated for this. A finer designer of platform games has never walked this earth, in my opinion. Even though the game is so large, you are very rarely left wondering where to go next. Every screen is packed with clues as to what to do, even if said clues aren't particularly blatant. A tree might extend above the top of the screen, or you might come across a blank wall with a considerable amount of open space in front of it. It doesn't give the game away, but it does add a very nice puzzle element to what is already a superb game.

Take the first level, for example. Right at the very start there is a block just hanging in mid-air. Leaping off it

I've yet to see a pack sack of the levels. There are all sorts of goodies waiting to be discovered. Here is just a select few of the joys of it:

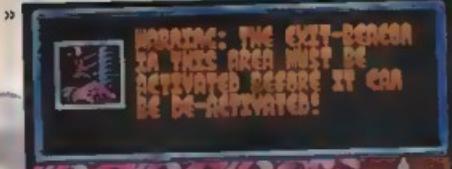

Very handy for crossing large spaces, the nimblest stars! Piss's descent is an almost shafty, allowing him to make far longer jumps than his bare feet.

One of the only real weapons in the game, this fires a selection of different fruit, depending on the number of power-ups you have collected. If it starts off fire-breathing apples, but as you increase its

powerfulness, you can work all the way up to burning cakes. This gun is handy for clearing a path along the ground, but needs a little practice to make good use of it when in the air.

Can be thrown at enemies, or especially at large boxes of TNT. A short blast means that it will explode shortly after being thrown, so you had best get out of the way as quickly as possible.

Ever fancied taking a piece of meat rock home with you? The cleaver can be thrown at enemy sprites as a weapon, or can be used as a stepping stool to allow Pond to reach higher platforms.

accomplishes nothing nor does hitting it. Yet running along a bit you find a bomb. Drop the bomb on the block and when it explodes, it takes the block with it, opening up a secret doorway to a secret donuts room. There's a prize of five games of your choice to the first person to map out all the secret locations in this game!

means that it will take some people weeks before they eggball it. There are no easier just as long as Pond, and if you can get through level two without losing energy within the first fifty stages of playing the game, I'll be very surprised. It isn't frustratingly hard, though, and that's partly what makes the game so addictive.

Whenever you lose

O SOLE O MIO!

Visually, the game is wonderful! Although it's very different to Robocod and Aquatic Games in that it is nowhere near as colourful (but what do you expect when it's set in space?). It also doesn't seem as cute as the last two games. Instead, this is a tougher, meaner Pond we're seeing. He's a fish of action, not silly little dances and cute expressions. There's bags of character in the game, too, although some of the cuteness gets used against the player.

Take the sweet little chicks, for example, who rush to meet you when you wattle near them. Happily they waddle across the landscape, until they reach you fast, at which point they explode taking some of your energy with them.

One thing this game is, though, is very, very tough. The size of it alone

JAMES POND - THIS IS YOUR LIFE

James Pond report. Smirky McSmirk as he takes on nostalgic task back at the history of this incredibly successful computer entertain-

JAMES POND
It all started on a tiny little computer game, with a fish who swam around a lot and learned other fishes. Er, well, CU AMIGA Reg Ed Jim Stear wrote it by this time, deciding it to be his best. Being some kind breed while current Dig Ed Lisa Collins is right down the line on that one. Of course, leading it is now it does all seem quite primitive with little of the charm and character that have made Pond such a brilliant character, but at the same, well, what can I say?

energy or a life, you know why and you know you could have avoided it. There are no hidden, nasty surprises, and the controls are good enough to allow you to fly through the early levels.

FLIPPER GREAT!

The ultimate follow up? I think so. Millennium have the Pond series

down to a fine art now, and I should think so too considering the number of platforms that Robocod got put out on. If you've seen the incredible Megadrive version of this game then you'll be happy to know that this is identical.

An amazing game – it's just a crying shame that non-AGA owners will have to miss out.

AGA ONLY!?!?

Yup, I'm sorry to have to tell you this but James Pond 3 - Operation Starfish will not be available for anything but the A1200/M4000 series.

The reason for this? The game is just far too big to fit on the original AGA and there is no way the levels would ever fit on a 1MByte machine, and rather than take a risk on ramming the game by making it slower, Millennium have decided to call the A500 version. If you really want to see it on your Amiga machine then get you 2.0+ upgrade now and then purchase Millennium

can you manage it?

THE ULTIMATE FOOTBALL MANAGEMENT SIMULATION FOR YOUR AMIGA

The Tactician

Select your team and play the transfer market using real player data to make your decision. Unique tactical section enables you to have total control of individual players. Change your tactics during the game using the unique preset tactical options - should you hold onto that one goal lead or go for another? Review the comprehensive and detailed statistics to plan your progress when you need to.

The Coach

Organise your coaching and training. Get your scouts "on the ground". Invest in your youth team and nurse your injury list back to full fitness. Select the best backroom staff to maximise your team's performance.

The Manager

Deal with full post-match newspaper reports on your performance. Take tough decisions, deal with your chairman, sponsors and fans.

The Businessman

Negotiate your contract, look after yourself and make sure you're the boss of your own destiny.

The Winner

You're a 35 year old new boy - how long is it going to take you to get promotion, fill your trophy cabinet and build a dynasty. Your time is up after 30 seasons at the top.

We have managed to create an ultra advanced ARTIFICIAL INTELLIGENCE simulation of gameplay and player decisions. Relive the superb animated highlights of goals, saves and injuries. Everything you get in any other management simulation and more.

CAN YOU MANAGE IT?

...Clockwise
...ONCE AND TWICE

The football management war starts to flare up this month. Tony Dillon reports live from the scene.

TACTICAL MANAGER

With so many titles appearing every year, it amazes me that the football management simulation market has strength in it. This is a real fanatics' market; the punters who buy these games will quite happily buy every single one that comes out. Why? What's the attraction? I do it myself and I can tell you why.

But why do they all look so similar? Well, there are only so many jobs that a manager can do. To succeed in any game you have to put together a squad of excellent players, all of whom gel together and are co-ordinated well, though by you on the pitch so that they form a strong offensive line with a consistent defensive backbone.

WALK ON...

So how does *Tactical Manager* improve on the plethora of football management simulation games already out there? Well, Cammie Martens, TIM's programmer, seems to have cracked it. Anyone who regularly plays football management games will already know that

Cammie is the man behind the successful *Football Tactics* series of games, a mail order only set, hailed by many as the most realistic available. The reason they are so realistic is that the whole thing really is feasible. All the teams in *Tactical Manager* are set up as they are in real life and

the highly-detailed player statistics are as close as you are likely to get. The end result is realistic scores between teams, and authentic-looking transfer deals. TM isn't about having a lot of money and buying the best players unlike most you could care to mention. It's more about using the team and the limited finances as you have come top of the league.

TM features a multi-player system which allows up to 42 human players to play in once (any player can step in at any time to perform the actions they want) so no more tedious waiting about with turns, with computer players taking all the paps. If it's your job to win every single league and cup you can, then by raising your own profile. Each manager has a rating and their rating decides the level of team you can manage. You won't be able to start if it's the first time and manage Manchester United, for example, but after a couple of seasons, if you've played well enough, your rating should be high enough for you to apply for the job.

WALK ON...

This game has more menus and options than I could easily mention here but you'll already know that if you've played this month's coverdisk. You'll also know that the matches are presented in such a way that you actually want to watch them. Three levels

commentary let you in on the action. The simplest, and easiest commentary shows you the goals only. The second commentary gives you all the match highlights and the third gives you ball action.

The highlights work best, as far as I can see, especially if you enter the 80-minute point a goal down. As you are only told the interesting parts, with a small rectangle moving up and down a drawing of a pitch to show position, things can actually get quite gripping. Try it for yourself, it's that good.

Tactical Manager might not be everyone's cup of tea. It doesn't have the smooth and flashy presentation of many games, and its simple layout may put some people off. However, underneath all of this is a superb management engine grinding away. Overall, TM is a very absorbing tactical game — one for the kit bag.

The Essential Selection

Get the very best from your Amiga computer with these best-selling books from BSB

Amiga Workbench A to Z by Bruce Smith £14.95 ISBN 1-873308-28-0

Best selling author Bruce Smith's latest book is the perfect guide to Workbench 3. Perfect for beginner and advanced users it describes how to use every feature, menu, icon file and command in what is probably the most versatile and widely used Amiga program today. Packed with helpful hints, tips and advice.

Amiga A1200 Next Steps by Peter Fitzpatrick £14.95 ISBN 1-873308-24-8 Free Disk

If you've come to terms with your A1200 you're looking to improve your techniques and explore the many possibilities that the machine offers. Amiga A1200 Next Steps shows you how it explores easily how to choose, install and manage a hard drive, use MultiView and AmigaOS and how to improve storage and display. It introduces video and graphics editing, making music and programming and much, much more.

Amiga Disks and Drives by Paul Overton £14.95 ISBN 1-873308-34-6 Free Disk

Covering everything from floppies to hard drives with RAM, HAD and CD-Rom drives inbetween this book explains not only how to install software properly to run on hard disks, repair damaged disks and recover lost files with essential back-up, but also explains the principles of how they work and how to use them effectively.

Amiga Assembler Insider Guide by Paul Overton £14.95 ISBN 1-873308-27-2, Free Disk

Do you want to learn Assembly language but don't know your IntaMessage from your A10? This book is for you. Explaining all the concepts, processes and jargon, its step-by-step examples and easy to follow instructions provides a perfect start in Assembler programming.

Amiga A1200 Beginners Pack £39.95 £3.95 p&p ISBN 1-873308-30-9

Leave nothing to chance and invest in this bumper-value pack which contains the Amiga A1200 Insider Guide, Amiga A1200 Next Steps Insider Guide and a highly polished 1-hour training video. The video teaches you how to set up your Amiga and use the Workbench. The pack also contains four disks of essential shareware software and documentation.

SYNERGY

Are Black Legend showing the console market that the Amiga is still good for a few more original puzzle games? Tony Dillon looks at Synergy - a brilliant double pack of two very different games.

Game number one – *Statix Take Columns* – is the TeMS variant that had more in common with Connect 4 than anything else – and stick it on a see-saw. That's the only way I can think of to describe Statix as one of the most addictive puzzles I have ever played. Okay so it might not look like much on a screenshot, and your first thought could well be the same as mine – it looks like a Gameboy 1/2 – but believe me there is a lot more to it than that.

The game starts with a brief description of what you need to do to finish the current level (build a certain number of lines in varying directions), and then all hell breaks loose. Pieces appear at the top of the screen, and you have a couple of seconds to position the block before it drops to the bottom. The skull blocks can't be restored, so you need to be very careful where you place them.

Who is been playing particularly badly then? One more block on the left and this clown is here,

are five different types of block, and getting three in a row removes them from the pile. Essentially, all you have to do is make sure that neither side of the see saw touches the ground, which can be extremely tricky when you have the whole thing heavily loaded, and then you drop a block that removes half a dozen pieces from one side. To play this game well, you need to stay half a dozen pieces ahead of yourself!

With various ways to play the game, from a simple one player set of levels to a two-player challenge, this will keep you hooked for ages. Statix is not a very exciting game to look at, but as far as I am concerned it is a very exciting game to play. Admittedly, there are people out there to whom this won't appeal at all. However, if you loved TeMS, you'll get a real kick out of this.

With various ways to play the game, from a simple one player set of levels to a two-player challenge, this will keep you hooked for ages. Statix is not a very exciting game to look at, but as far as I am concerned it is a very exciting game to play.

Admittedly, there are people out there to whom this won't appeal at all. However, if you loved TeMS, you'll get a real kick out of this.

MEGAMOTION

This is another unusual puzzle game, as far away from *Statix* as you can get. If you can remember US Gold's *E-Motion* then you'll have a fairly good idea as to what this game is about. You start off with a group of two or more balls at the start of a small maze and you have to get them to the other end. To do this, you fix one of the balls in their current position, while the others orbit it in a geometrically satisfying way. To move around, you need to change between balls by clicking on them when they are in the position you want. It might sound complicated, but in practice it's quite simple. One way to explain it would be to imagine a line, with three points (A, B and C). You have two balls, and ball 1 is fixed to point A. As ball 2 swings around, it passes over point B, if you change balls while ball 2 is over B, then ball A will swing around, passing over points A and C. Get it? Well, I would draw you a diagram, but I could

The end result of this mind bending madness is a fairly addictive and extremely tough puzzler. There are all sorts of traps and spikes dotted about the levels that will destroy your balls on contact, and if you have less than two you lose a life. It's that simple. What else can I say except that it's great fun, and you could do a hell of a lot worse with your money than buy these two games!

This level is more than just juggling an awful lot of balls?

Have Ocean Software come up with their own Amiga Sonic beater? Tony Dillon isn't so sure.

recently been very quiet recently as far as the Amiga is concerned. Even though they hold in their hands two of the most awaited Amiga games to date (*Inferno* and *TFX*), for quite a while now we've had little cause to chase the chisely Mancunians for review software. So quiet were they that I almost didn't hear this package drop through the letterbox. While *Millennium* are jumping up and down with joy at the releases of *James Pond 3*, Ocean are whispering that *Mr Nut's* arrived.

COURTESY

Mr Nuts is a cute little squirrel who has to save a planet from the clutch of evil chickens from outer space. Okay, so the pic might reek a little of Alfred Chicken, but we'll gloss over that for the moment.

Using all his skill and judgement, Mr Nuts has to work across the huge maps that make up the planet, systematically closing down all the chicken bases while helping his friends Mr Hipoint, Mr Rabbitt and Mr Peccon.

He does this in two ways. Firstly, there's the scrolling platform bit, which looks absolutely gorgeous in these screenshots, you have to admit. Bright, vivid colours, large

Between levels these specificities lie around 10% for some strange reason.

Right, the tiny screen
makes up most

out sprites, and if you could see that silky smooth animation – oh, it would take your breath away. This is only a small part of the game, however.

The real game happens in a Zelda-style

scrolling walkabout around the map finding bombs, opening chests, talking to characters and so on. For some reason this all takes place in a window that takes up more than an eighth of the screen, which is incredibly frustrating. *Mr Nots* is, basically, a mappier's dream, as they mark down all the paths with their twists and turns along the way. Using teleports, ladders, rats and bombs you work through the map until you close down an island. Then

it's off to the next level

Looking at the game, it's quite obvious that the whole thing is perfect for the younger market. The characters are all done in a cute, colourful way. There are no real taxing puzzles and the platform sections are over as soon as they start. This is no justification for the low mark, however.

SHORTY

Short: The relatively low mark I've given it has come about due to the one major shortcoming that *Mr. Nutz*, like so many before it, has suffered from. There is very little gameplay. The map section is far too simple to be of any real value to a game's player, and the fact that everything happens on a tiny screen is unbearable. Why not make it full screen? It would have made all the difference!

It's the platform section where the whole game falls apart. Mr Nut can run at approximately 130 miles per hour. However, levels are only playable if you move at 20 mph. Interestingly enough you can walk from one end of the level to the other at top wheelie in around fifteen seconds and only lose a smell

Above, one of the space chickens.

amount of energy. This game will only pose a problem to real games-players if they let it.

Just as well, really, as the colour scheme renders anything in the platform sections little more than a multi-coloured mess. I'm all for using hundreds of colours, as long as they aren't all garish green! What is the point of having a game so colourful that you can't actually tell where the backdrops end and the sprites begin? I was getting hit by things I couldn't see until they'd hit me, and avoiding things that ended up being nothing more than on-screen furniture.

NO GOODY

It's just a real shame that this had to come out at the same time as James Pond 3, it really is. Not that I want to get too negative or anything, but there really is no competition. One is a fast, playable platformer with puzzle twists and various other interactive elements, and the other is bright, colourful but ultimately thin and characterless.

Great presentation.
Shows about the road.

ARCADE POOL

Quickshot Steve Keen snatches up his Balabushca and rests his sweaty palms on the green baize table once more, as he tests out the latest pool game.

In a bit of a pool demon and as such, I was really looking forward to playing this latest super-value release from the Team 17 stable. Call me Mr. Opportunist, but when this month's software was up for grabs I grasped it with both hands and made a speedy retreat to my bedroom with a four pack of Tezor and family sized packet of smoky bacon crisps. I just couldn't wait to rip the vacuum packed cling film off it.

POT LUCK

A lot of people can't understand the fascination pool gurus have with thumping a pack of different coloured balls around a cushioned table, but to most it's as addictive as a caffeine-filled Quarter Pounder with extra cheese. This version is specially tailored for enhanced Amigas, but will run adequately on most (1 Mb and upwards). The inclusion of the British red and yellow ball game, with English rules, is long overdue and, particularly in this mode, the game has a distinct pub feel. The use of a cue that pops up every time you take a shot and actually draws back to the edge of the table is a lot better than other systems, where you just click a mouse button and stand back as the balls start to shoot off at all around the table.

Now you might think that playing Arcade Pool will be a doddle after hanging out with the big boys down at your local pool hall, but you couldn't be more wrong. The control system is simple enough: just drag the cursor over towards the ball you want to hit and place it down. In certain conditions and on certain levels a staggered white line will appear showing you

exactly where the cue ball will go after it has made contact with the pack. This is very useful for potting shots as you can quite accurately judge where the white is going to stop by watching the animated shadow that follows the path of the white before you take the stroke. Down on the bottom right of the screen are the power bars and a white ball with a tiny cursor in the middle of it. You can click on this and drag it around inside the white to add side and screw-back, an acquired skill in both real pool and the computer variant.

Simple to appreciate, yes, but incredibly difficult to master with any degree of accuracy. For some reason I had more success with these professional skills during the American game. I don't know if the pockets were slightly bigger on the York tables, as they are in real life, but a greater percentage of shots that I took whilst on the blue baize table, were sank than on the green.

IN THE BLACK

Loaded with options, the game has just about everything a would-be

MARIO SAUDIA

hustler could want. Different table frictions, skill levels, shot aiming aids and set ups are just a few. Most notable are the eight different versions of the game you can play, such as 6-Ball UK, 9-Ball US, Straight Pool and Survo or Koker, as it's more commonly known in pubs. This is where you get together with up to eight mates and take turns to pot any

On dear, oh dear, what a mess!

ball. Every time you miss a pot you kill off a life and the last player left in the game wins.

There's even an option to try out those fancy trick shots and a custom pool game that allows you to practise plays.

Apart from the obvious versatility at the game, not everything in the garden is rosy. The control method, a cross hair/cursor affair, requires absolute pin-point accuracy if you want to avoid ricocheting the balls off the cushions in unexpected pinball fashion, and it takes a frustratingly

First class computer-assisted break disk games with Arcade Pool.

different pool variations and have the patience to learn the game again from scratch, it's quite a laugh. After watching the computer pot its fifth ball in a row off four cushions was left feeling well cheeched! Therefore, to get the best out of the game play against a friend.

Set on an alien planet your aim is to escape. If you have to
quit out of your own limbs to stay alive, then that's what you must do.
More than 100 variables managed in real time: your body temperature,
pain, disease, gengress, hallucinations...

World
Your world is mapped 3D, computed in real time. Over 3 square miles of play area includes canyons, reefs,
islands, and caves.

Challenge
Should gather food, find water, make your own clothing and weapons, deal with health hazards and fight off predators, test
survival skills to the very limit, and set the hell off that... over!

Silmarils

Available for PC and compatibles:
AMIGA / AMIGA 1200
ATARI ST / STE / Falcon
Coming this September:
Tiger, SDO, and CD32 versions.

Supervision are out to prove that boardgames don't have to be bored games.

Tony Dillon gets out his dash and dabbles in real estate.

Now to say, I am one of those people who actually enjoys a good game of Monopoly as long as it doesn't go on for any more than an hour and the people I'm playing with know the rules. However this situation is very rare as many people will point out. That's why I was so pleased to see this little offering from Supervision. Aha, I thought to myself, here's my chance to waste whole evenings going round and round a small board trying to be a big shot, end I won't have to wait for anyone to take their turn, plus all the fid-dly rules about things like mortgages and auctions can be figured out by the computer. Not quite heaven, but a good time to be had by all.

CAR, BOOT...

If you've never played Monopoly, then I have to say you've missed out on something that everyone should have the chance to enjoy: subjected to it's a game about buying and selling property.

Various streets around London have been divided into groups called Monopolies, and the aim is to buy as many of them as possible, develop the area by building houses and hotels on them, and then bankrupt everyone else in the game by charging them a ridiculous high rent every time they count lands on a square owned by you. Run out of money and you can sell property to the bank. Run out of property and money and you're out of the game. Dead simple isn't it?

Or at least it is when described like that. Like I said, there are all manner of fiddly little rules that many choose to completely ignore, and a computerised judge and jury seems like the obvious thing to include in a game like this. SO WHY ISN'T THERE ONE? The computer asks you to do vary it is, leaving you to your own devices to figure out what's going on. When someone lands on one of your properties, rent isn't charged immediately

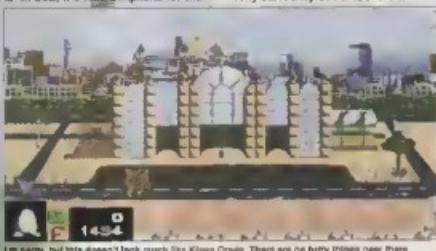

MONOPOLY

No, you have to select the icon to demand rent, but you only have a couple of seconds to do it in, so you've got to wrestle the mouse off the previous player as quickly as possible.

TOP HAT, BOAT...

The presentation of the game isn't all bad, if I do say so myself. The

I'm sorry, but this doesn't look much like King's Cross. There are no tatty things near there

[Left] All the usual shenanigans are in there [Below] Everywhere you go, you get a little reminder of your place, errr... home.

presumably adult audience this game would enjoy a collection of slightly amusing characters sit around the board and amble slightly when it's their turn. For each move you see a little animation of the piece arriving at the destination on the board. Okay, the pieces don't really look like that, but at least the London skyline is realistic.

So what's with the low mark then, you might ask. After all, Monopoly is a proven game, and one that has invited families for years. Surely there can't be anything wrong with a computer version? Unfortunately, there are a few things about the game that I don't like. The biggest one being its speed of play. Okay, so Monopoly was never a fast-paced game, but a lag of a second between sending an icon and it actually regularising just isn't on. This renders the game very testing to play. There isn't a lot going on at any one time, and the rules of Monopoly aren't all that hard for a computer to follow, so I can't see any reason for the pauses between every action. At times I wonder why software houses put out games like this. Why can't they see that there are

obvious playability flaws which spoil the game? I know that it's all too easy to get wrapped up in production to the point where you can't see the wood for the trees, but if a game veers too far away from the original concept and thwarts your enjoyment, then all the effort will have been wasted.

DOG AND IRON

Monopoly has all the makings of a great computer game. I have played a version of it on a Macintosh and could happily recommend that, but this Amiga version just falls between two stools. On one hand, it is an adult board game full of terms and rules that younger players wouldn't have the patience for. On the other, it's been presented in a way that will best appeal to a young market. As a result, it doesn't seem to fit anywhere.

Goalmouth action in all its glory. This is the replay screen.

Fantastic lower level ups some more as Sierra release their own entry into the computer game World Cup, and I'm pleased to be able to report that it's a very competent and extremely playable arcade soccer game. Falling somewhere between Striker and Sensible Soccer the game is based around the World Cup draw itself, and one of the most instantly playable arcade football engines yet seen.

Let's begin at the beginning. Although the game is based around this year's World Cup, it is by no means an official licence. As a result you can either play as a team in the official World Cup draw, or take part in a random one. Up to eight people can play at once, each selecting a team and playing through their respective groups until victory is secured. Naturally the team you decide to play has a large bearing on whether or not you actually stand a chance of getting through - Italy are far better than England, for example, and because of that you're going to have a harder time with the latter. It's an interesting way of setting the difficulty level for the

The kick off. See how the net actually bows in its website?

game, and one that works surprisingly well.

Before each match you are presented with the only mathematical aspect of the game - the chance to alter your squad. You are shown all the players in your team, including all reserves and all the relevant statistics. If you like you can move players around by simply clicking on the one you want to move, and then clicking on the person you want to swap them with. Adding or removing parts

SIERRA SOCCER

Sierra? Doing a football game? And it isn't an adventure? Tony Dillon is intrigued - he checks it out.

Team Selection

| Team | Player | Position | Age | Height | Speed | Stamina | Strength | Agility | Technique | Passing | Shooting | Defence | Attack |
|---------|--------|----------|-----|--------|-------|---------|----------|---------|-----------|---------|----------|---------|--------|
| England | David | Striker | 25 | 6'4" | 85 | 85 | 85 | 85 | 85 | 85 | 85 | 85 | 85 |

HIT!

BENEATH A STEEL SKY

If living under a steel sky has been putting too much pressure on your brain then Michael Filby should be able to take that weight off your mind.

PART

1

Start off by snapping off the ring to the left and go right. Use the circuit board on the various pieces of junk until you get Joey activated. Chat with Joey then step on the lift. When Hobsons arrives, go in the right quickly, open up the cabinet and once you've grabbed the spanner, return to the lift room. Examine the door and then talk to Hobsons. He will tell you what is wrong with the droid. Then tell Joey what's wrong and he will fix it.

When the droid activates the lift quickly jump down the hole. When Joey arrives ask him to open the door. Search Reich's copies and take his belongings. Go right, then right again into the building next door which is the

factory. Chat with Anita and when Lamb arrives, tell him you're security. Now go right, put the spanner in the cogs and then take it back out again. Go left, examine the droid, and use the spanner on it. Chat to Joey about a new shield and then go right. Try walking through this top-left door, then ask Joey to check out the storeroom. When he returns, tell him to disable the fuse box and when he has done this, walk into the storeroom. Pick up the walkway and get the small lump of putty beneath it. Show this to Joey and he will reveal that it is a plastic explosive

PILLOW TALK

Leave the factory, go to the building to the far left of the walkway — this is the steam room. Inside, use the spanner on both of the buttons on

Keisha seems pretty CUT UP about it!

In the boiler. Ask Joey to press the button on the right and simultaneously press the button out to the left. When the old man leaves, go to the left of the room and pull the switch. Remove the light bulb and put the plastic explosive in the socket. Pull the switch again and two more switches will be revealed. Pull the one on the right downwards.

Now leave the steam room and go to the lift near the factory entrance. Use Reich's card in the slot and enter the room. Move the pillow and pick up

the holographic projection and ask Joey to persuade the hologram to open the door. Go inside and chat with Burke.

Offer Burke your testicles if he'll give you the Schreibmann Port. Chat to Burke some more about everything. Leave the surgery and go right until you reach Anchors Insurance (next to Traveco). Examine the status, then chat with the man about everything. Be sure to enquire about a special policy and tell him that Burke sent you. When the man leaves, ask

password, go left, pick up the password, go up, put down, go right, down, pick up, put down, left, pick up, up, right, down, right, down, put down, up, then exit the room. Once through, collect the bust and the book, now Decrypt your two new documents. Now Document.

Use Reich's card with the LINC machine and select 4. Enter the security number then select 1. Read all the documents then select 0. Now select 2 and 2 again. This gives you special authorisation and you should now edit the system. Use Reich's card

then through the top left slot. Use the dog biscuits on the plank and wall for Mrs. Piermont and her dog to turn up. When the dog starts to bark pull the rope. As the guard gets distracted, sneak into the cathedral. Go through the top left exit and open all the locks, then leave and go back to the top level via the lift. Enter the factory and go to where you last saw Anita alive. Wear the racketoss suit that's hanging in the middle locker and go right.

NUCLEAR REACTION

Access the control panel and select 2 Exit, and enter the reactor room. Just to the right of the core you'll find Anita's card on the floor. Pick it up, leave the room and close the door with the control panel. Go left and change back into your coat. Leave the factory and go back to the LINC space interface via the Security Staircase's lift. Use Anita's card in the interface slot and sit in the chair.

Once in LINC-space go right and use the Bioho program in your inventory with the eyeball. Quickly go into the Upper exit, go up again and use the Playback program with the wall. Go through the upper right exit, use the Screen program on the eye and pick up the tuning fork. Now discovered.

Leave the security buildings, go to ground level and talk to the gardener outside Mrs. Piermont's house. He'll tell you that his name is Eduardo. Give him the ID card, tell him you're here to see him. When he asks for your ID card, hand him Reich's card. Talk to him some more. Leave the factory and Use Reich's card with the LINC terminal. Select 4 and enter the code from your security manual in the game box. Select 2, then 1, then 1 again, then 2 again. Exit the terminal and wait for Lamb. Chat with him and he will encourage you to enter his apartment.

The magazine. Leave and continue past the lift you have just been in, going right, you can now enter Teveiro. Chat with the men there as much as possible, hand him the magazine and pick up the ticket. Leave and go back to Reich's apartment door. Wait for Lamb outside and chat with him when he arrives. When he mentions going away, hand him the ticket.

Go back to the factory via the lift and chat with Lamb again. After the tour he will leave you outside the store-room so now go right and talk to Anita. When she asks for your ID card, hand her Reich's card. Talk to her some more. Leave the factory and Use Reich's card with the LINC terminal. Select 4 and enter the code from your security manual in the game box. Select 2, then 1, then 1 again, then 2 again. Exit the terminal and wait for Lamb. Chat with him and he will encourage you to enter his apartment.

BIODEGRADABLES
Before going down in the lift, locate the cable to the right of the screen and ask Joey to cut it. Go down in the lift and pick up the cable. Now go to the apartment and use Reich's card in the slot on the right. Go into the apartment and use the machine on the right. Pick up the video on the left and leave. Go to the far left of the long walkway and you'll find Burke's Bio Surgery. Go inside and chat with

Joey to use his welder on the Anchor. Pick up the anchor when Joey has finished. Leave, and make your way to the top level again.

Now go into the building opposite the steam room and you'll find yourself back at the starting position. Go up the stairs and out of the door. Use your anchor with your cable to make a grappling hook and use it on the security sign on the wall of the lasing building. Go through the door to the right and use Reich's card in the slot next to the interface. Sit in the interface and, once in LINC-space, pick up the cat. Now head out of the right exit and use the Odeo program in your inventory on the carpet bag. Use Decompress on the compressed data and Decrypt with the document.

FIND YOUR WAY

Go through the right exit. Use one of your password programs with the door and then go right. Put down another

in the slot next to the lift. You are now in the Security Station. Leave, and make your way to the other lift. Use it and then go left to the next lift. Your card will now be able to access this lift, so use it. At the bottom, wait for the fat woman with the dog. Chat to her and then go left and chat with the club doorman. Find the 1st woman (Mrs. Piermont) again and ask her to sponsor you.

Now go as far right as you can, until you come to the screen with the boy and the gardener. Press the button by the door on the right. Once inside chat with Mrs. Piermont. When she makes her telephone call, place the video in the VCR. While the dog is distracted, get the dog biscuits from his bowl. Leave. Go through the bottom left exit and examine the wooden double doors. Use Reich's card on the lock and go through the door. Pick up the securitons and leave. Go right,

NEXT MONTH

Okay folks, you're getting there. If this lot hasn't helped you finish Street Spy then tune in next month for the final breakdown.

The Best Selling Word Processor and Database just became even better... **VALUE!**

Since its launch, Pen Pal has become the
most popular package of its type

Not surprising when you consider the extensive features at your fingertips, combined with user friendly simplicity, it was bound to be a winner! In a comprehensive Word Processor test, Amiga Format commented "There is little to fault Pen Pal, it deserves to do well" - quite a prediction it seems! Format have since said that it's "Still the best value for money..." If you're not a Pen Pal user yet, we hope you soon will be, because at just £39.95... the best just became better, even better value!

Pen Pal

A superb package, with immense power, to fulfil all your Word Processing needs, and, with an integrated Database tool! It's all so easy to use, you'll rarely need to refer to the extensive 250 page lay-flat spiral bound manual. Users frequently tell us that they've never found a program they get on with so well.

THE WORD PROCESSOR: You can... Open multiple documents simultaneously; search and replace; cut, copy and paste; check your spelling with a 140,000+ word dictionary; import your favourite IFFHAM graphics; from programs such as DPaint, or Clip Art files in various sizes and colour; automatically flow text around graphics in any Workbench compatible font (there are over 200 available styles) in different sizes and colours to suit your design... Even as you type!

Full Page View with position, edit and creation of graphic objects is extremely useful for a designer. All this from a word processor not Much, Much, More! As you can see from the documents shown on the disc this is no ordinary program.

THE DATABASE: With 32 fields per record, 32,000 records per database in a fast not of 1000 records in less than 5 seconds, this is *not* database Mail merging into the Word processor couldn't be simpler, with easy creation of templates for letters or reports, into which information can be merged.

AND... Remember, Pen Pal comes with full support for the new or experienced user completely free!
Friendly help for all registered owners is just a phone call away.

SoftWood - Quality software for your Amiga
With Pen Pal you're not just getting one off product! SoftWood are acknowledged as the World's leading software company who develop just for Amiga and no other system. Once you've registered SoftWood product owner your investment is protected until you have access to unlimited free technical support. Owners charge £300 and premium upgrades to other SoftWood titles, both software and hardware. Exciting new products are being developed right now. Pen Pal - your first step on the SoftWood ladder of Amiga software.

Pen Pal is available from all good Amiga software Dealers or from SoftWood. Call for your list of stockists.

SoftWood Products Europe
PO Box 19 Alfreton
Derbyshire DE55 7RW England
Tel: 0773 836781 Fax: 0773 836781

Pen Pal is compatible with any Amiga from Amiga A1200/A4000 ranges with a 1 MB

BUDGET

Steve Keen checks out some top-class titles on a shoestring budget. If only everything in life was this easy!

LURE OF THE TEMPTRESS

HIT SQUAD OUT NOW £14.99

Graphic adventures seem to be ten a penny on the Amiga now, but there was a time when you'd have to walk 1000 or more miles to find a decent point and click romp. *The Secret Of Monkey Island*, from LucasArts, was the one that REALLY started it all, and hot on its heels came *Lure Of The Temptress*, rich in atmosphere and replete with new ideas on how to present an adventure.

You play Dlemil, imprisoned in one of Turval's darkest dungeons while an evil pack of marauding mutants, the Skart, led by the machiavellian Sorceress, have just hit town. In classic *Great Escape* mode you've got to figure a way out of the hellhole and find a way to finally rid the land of the evil monsters.

Lure Of The Temptress placed big emphasis on its character intelligence system, called Virtual Theatre. The principle was simple. All the characters that you meet on screen actually existed within the game as independent people. So, rather than disappear from the game as soon as they're out of sight, they continue to wander around and you find yourself bumping into them later on. They may not be doing anything particularly interesting, but it's nice to know that a guy you spoke to about the weather in the courtyard a few hours ago could very well end up sitting next to you in the pub at the end of the day. You could even pick a character and follow him around from one place to another – they just never vanish. More importantly, you can actually tell characters to perform tasks for you and they'll wander off and catch up with you later, whenever you may be.

In short there's lots to do, loads of people to meet, scores of cunning puzzles to solve and a detailed game environment to interact with. The game's also littered with impressive animated sequences that cut in to show you the action in more detail. *Lure Of The Temptress* stands the test of time more than most, and for me, still ranks up with the very best looking and playing graphic adventures around.

87%

JIMMY WHITE'S WHIRLWIND SNOOKER

HIT SQUAD OUT NOW £14.99

A calmness descends on the crowd. The Hurricane loosens his red hot red ball, pot pocket. He draws back his cue, pausing for a brief second to let a tiny grey remove itself from the green baize suddenly the red ball bounces into life and a huge billowing lace appears on a surface, shortly followed by a pair of waving hands that just out from its side. Heng oh! It's Jimmy White! This isn't Pot Black. No, it's Jimmy White's Whirlwind Snooker and a certainy did make a few hands turn (indeed spin) when it was first released.

Even today Jimmy White's game is the most accurate snooker simula-
tion you can get on any format. Every conceivable tool is here for the
user to make you turn at the table as realistic as possible, not to mention
the weird creatures that mutate from the balls if you take too long over a
shot. In fact some have said that there are just a few too many controls to
master – the game is certainly not for those who are afraid of giving their
mouse a good working over. The control menu can be displayed either at
the side of the screen or much better and more discreetly, running along
the top. You can rotate the table around 360 degrees, view it from any
selected angle and even zoom in and out on the pocket that you're
aiming for.

Different tournaments and championships are available, as well as
snooker and a choice of computer opponents that vary in skill. My
advice is to start off as low down the table as you can as it takes a lot of
time to master. The basics are simple, but applying side to shots, spins
and screw back can take hours to perfect. The table is massive too but
once you've figured out how to tilt and rotate the beast you'll soon over-
come the problem of not being able to actually see the pocket that you're
aiming for.

Jimmy White's Whirlwind Snooker does look slightly dated in the
graphics department and the sound is distinctly smelly, but it is still the
best snooker game available and, let's face it, no one programs
are better than Archer Maclean!

86%

DUNE

HIT SQUAD OUT NOW £14.99

I've lost count of the amount of times I've satted down and tried to get my head around *Dune* the movie. If only they'd put it on TV earlier in the afternoon I might be able to stay awake long enough to see the end credits! So, when the game of *Dune* was first released, I didn't really go out of my way to give it a whirl, but now I realise what I missed.

I won't go too far into the plot, suffice to say that the game is a lot easier to follow than the film. You take the role of Paul Atreides, son of a Duke who lives in the palace on the planet *Dune*, which is under constant threat from invaders who crave Spice, its precious material that aids space travel. It's your job to make sure that there's a constant stock of the stuff in the warehouses and that you recruit enough people to mine the substance.

You can travel around the planet *Dune* in a number of ways. At first by ornithopter, a mechanical insect style evaulation machine that skims the desert surfaces and flies you to your destination. Sooner or later you'll have to venture out on foot, but take care, stay too far into the desert without a life support system (a 'lifejacket') and you'll fry, or worse still, be consumed by one of the giant worms that burrow under the sand and burst up through to the surface, taking you by surprise.

Graphically, the game goes for basic-looking locations and backdrops, but some of the desert scenes, animations and travel are visually stunning. Of particular note is the curving use of lined colours that give the illusion of tumbling night to day. Best of all though is the music. So often in adventures this is put to the back of the list of priorities, but in *Dune* it's orchestrated with great style and atmosphere (just like the movie). The game's easy to control too, with little disk swooping and very fast updating allowing you to move between locations quickly and with minimum fuss.

Dune in 1994 is well worth giving a whirl and it, like me, you never could get along with the film or books. don't fret, this adventure is much more accessible.

80%

SLEEPWALKER

HIT SQUAD £9.99 OUT NOW

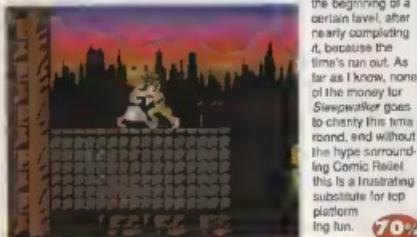

Sleepwalker was just one of the fun-tastic, pop-mongous, dream-tastic packages that hit the rounds when those big-hearted smashings, Comic Relief were in full swing. The game even features the voices of Harry Enfield and Lenny Henry in the intro sections.

Not a company to go against tradition, Ocean Software opted for a mindy original platform effort for its brief sim With character. The game centres around a young lad named Lee who is a compulsive sleepwalker and who, one night, jumps out of the window for a midnight roll across the rooftops. Fortunately he's spotted by the family dog, Ralph, and the hound gives chase, trying to lead the yob off of danger and guide him back to bed.

Each level presents different obstacles for the lad to negotiate. Lee's in a deep sleep, but every time he comes misawakened with a particularly dangerous object he'll instantly be woken up and die of shock. However, Ralph is as smart as a dolphin with two heads and can employ any number of tactics to keep the youngster dozing. By running ahead and leaving Lee behind, Ralph can disarm several of the traps that could harm Lee. For instance, Ralph can close sewer grates, cover manholes in the road and knock out nightclub bouncers. After you've eradicated all possible dangers one obstacles you must run back to called Lee and guide him to the level's exit. It's not all plain sailing from there though, as you still have to turn the youngster around and make him walk in the right direction. Some parts of the game require you to make a human bridge out of Ralph to prevent the boy falling to his death.

Quite a nice idea for a game, but the whole thing appears to have been a bit rushed (due perhaps to the deadlines imposed by its original Comic Relief launch date) and the game graphics and variety of levels leaves a bit to be desired (although the A1200 specific version has been enhanced). Bonus levels are included, where you guide Ralph around a level collecting balloons for extra lives and special icons. If you collect all the objects in every round you'll be able to see an extra animation when you've completed the game.

Venue of gameplay is what ultimately lets Sleepwalker down. Every level's against the clock too, so it's quite normal for you to be sent back to the beginning of a certain level, after nearly completing it, because the time's run out. As far as I know, none of the money for Sleepwalker goes to charity this time round, and without the hype surrounding Comic Relief this is a frustrating substitute for top platforming fun.

POOL

HIT SQUAD £16.99

N of only have the Hit Squad acquired the superb Jimmy White's Whirlwind Snooker from Virgin, they've also snapped up the rights to Archer Maclean's follow up, Pool. It may not be as comprehensive a game as Team 17's Arcade Pool, but it still contains all the rules for US and UK 8-ball and US 9-ball matches.

Using the same graphic engine as Jimmy White's, with some speed optimisation (believe me, this thing really shifts on an A1200) with a few minor modifications, the game has the same natural feel and realistic gameplay of the former, with a few minor twists. The big difference comes in the US games where the balls are spotted, striped and numbered. Sadly, the balls don't actually roll like they do in Arcade Pool, gliding along the table instead, with the numbers always facing you. But then the maths involved in creating rolling balls are beyond the A1200's capabilities. What do you want, realism or speed?

It's a great game, and although it's not very different from Jimmy White's, it's well worth owning both just for the variety of game. And at such a great price too!

Adventure Helpline

VAMP

Feeling fed up because your are stuck in the middle of your favourite game of all time. Never mind, Vampyra is here to raise your spirits and kiss it all better with some smart tips on your favourite adventures.

BENEATH A STEEL SKY

I bought the brilliant *Beneath a Steel Sky* from Virgin after reading the review of it in your magazine.

So far in the game I have gone through the security administrator's window with the anchor and cage. However, when I entered the interface, the eyeball zeaps me when I go towards the exit. The possessions I have are the Charon, the passwords, the Phoenix program and document, the decompressor and the breather plus report documents. I have also used the decryptor on all of the documents.

Jason Russell, Bristol.

Well I haven't actually had time to get my teeth into this game yet, as I've been too busy doing more interesting things, so I rang the help line 081-9648242, (me ringing Virgin's Help Line, that's a laugh for a start!) and tried to explain your problem. The very nice lady at the other end told me you shouldn't have any problems providing all the question marks have been removed from

your documents, plus a little man. Well that sounds like an interesting concept I thought. She went on to explain that if you look at the question marks using the magnifier they will disappear. She asked me if you had looked at your little man with the magnifier? I told her that I hadn't liked to ask as it seemed so rude. Is there a little man on your documents? If so, what have you been doing to him? She also said you are supposed to ensure that you are disconnected from the interface. I hope that helps if not, fear not CU AMIGA has come to the rescue yet again (these heroic devils) there's a solution in this very mag.

CURSE OF ENCHANTIA

I am stuck on the Curse of Enchantia. In the Ice World. How do you get into the Castle? I've found the bits of ice sticking out, do you have to play them in a certain order? If so, what is it?

Andrew Humphrey, Chipping Norton.

Well I know how I get into castles. I just fly up to the bottlenecks then crawl down the walls until I find an open window, but then I don't suppose you know how to turn yourself into a bat do you?

You are quite correct that playing the pieces of ice is the solution. But you've got to push and pull them in the correct order.

The solution is found by watching the penguins who are walking past in a certain order, and then push/pull the seals in the same sequence (it's shortest to longest). Get that right and the door will open.

MONKEY ISLAND II

I have been reading CU AMIGA for two years now and never had a problem worth writing to you about.

Curse of Enchantia: Watch out in case an elephant comes around your armrest nipping his head off!

But times change, and now my dear maiden I've got a few for you concerning *Monkey Island II* if that's solving.

1. How do I get the picture of the parrot near the real one?

2. How do I get the book on Governor Plutt's bed?

3. How do I win the spitting contest?

P.S. Please tell me whether you arrived/get anything to do with Silsby's departure?

Sigi Van Esen, Belgium.

Swinging around in Monkey Island II. You can swing around and make yourself a monkey tail.

Oh no, not more questions about birds looking in mirrors. You know why girls are called 'birds' don't you? It's because they pick up worms! Anyway, it's not the picture of the parrot you need, it's the mirror itself. You can simply buy the packet of parrot chow and then put the picture on the heat near the sun bed. Now you can pick up the mirror.

Go to the library and use the card index to find any book title you like, plus the *Joy of Hex* and the *Private Quotations* book. Ask the librarians for a temporary card to borrow the books. In the Governor's bedroom, use the extra book from the library on the book架 by the Governor's bed. To win the contest you must buy a selection of drinks from the bar first. Mix the blue drink with the yellow drink, blow the ship's horn, and when the Sputnaster moves away, pick up the flags and switch these places. Use the green drink with the crazy straw and move to the Fault Line. Launch your spit when the woman's cash flops and the wind will give it some extra help. (My God this is gross).

As to the sudden departure of our former editor, Dan Staggs, it was nothing to do with me. On the other hand I'm quite partial to our *Gamer* editor Terry Dillon. Mind you, it's well known that I'm partial to a bit of heavy metal head banging.

GOBLINS II

We are having a little problem with Gooblins II, and it is driving us mad. The letters we have collected so far are the stone, the bottle, the matches, the wine and the sausage. We have lit the fire next to the giant, but that is as far as we have got. Please, please help us. Keith and Ian Worley, Warrington.

I'm not a big fan of Goblins, but I do like fairies - they are always so beautifully dressed. Why is it that no-one loves a fairy when she's forty? Believe me boys, older girls are co much better.

Stealth, Indiana Jones, Monkey Island I and II, Kyrandis and Enchanted, but Future wars has us beat. We have gone through the shuttle port, up the escalators and been captured by the Grughorns. We have now found ourselves in a cell with an adict.

So what now? Please help us before serious damage occurs to the game disks, our Amiga 500 or indeed each other.

Mrs L. Butler, Nottingham.

What you must do is remove the grille from the air duct, insert the gas canister, then place a newspaper over the grille to prevent the gas steaming back into your cell.

The gas canister is found hiding beside the glass case which the girl was encased within in the Medieval World. The newspaper is obtained from the vending machine on the station platform.

Find the coin in the returned coin slot, then use it twice to make the machine work. Remove the grille from the duct using the key.

INFIDEL

I recently bought an ancient text adventure, Infidel by Infocom, from a charity shop. Do you or any of your readers with long memories know the answer to the following puzzle? I am in the pyramid, in a room with a recessed panel containing nine numbered bricks in rows of three. On the assumption that there is a secret room somewhere in this area, what do I have to do with the bricks to gain entrance?

Mrs A. Bird, New Melden.

Well this could be difficult, for I know from personal experience that the ancient Egyptian got up to lots of tricks with bricks, some of which were quite painful.

Have you heard of their techniques concerning the 'breeding' of camels? Not well I'll explain.

On one drink of water a camel can travel across the desert for a week, however there are some regions where there is no water available for at least two weeks, and only by 'breeding' your camel can it make the

journey. The trick is to load your camel to an oasis and let it begin to drink. When it begins to drink to a belly-full of water, you must surprise it by kicking its 'unconsciousness' between two bricks. The result is, in our sudden grip it will suck in double the amount of water that it normally could, enough to last a further week. Don't be concerned because it doesn't hurt - providing you avoid catching your thumbs between the bricks.

To solve your problem you first need to get the Scrolls, (another painful condition). Starting from the Room of Selkis; get the ruby, go southwest twice, get the rock and climb the rope. Drop the rock, wet your torch with the liquid, get the rock go west, east, then south.

Drop the rock and get the scroll. If you read the scroll it will tell you that you need to take out the third brick and then the fifth to solve your little problem.

She's beautiful, bewitching and 'Bad to the Bone', but Vampyra is still everyone's favourite nightmare.

As all fairies know, giants love a fried egg so obtaining one is your next task. Get Fingus to stand behind the chicken while Winkie picks it up. Once the chicken is firmly grasped, get Fingus to smash it on the egg. (And to think that you thought free-range eggs were cruelty-free!) Once you get the fire going, use the egg on the fire.

LURE OF THE TEMPTRESS

I know *Lure of the Temptress* is old hat, but I am still stuck at the beginning. I know I have to get a potion from Tadagh's house, but I have nothing to put it in. I have a broken glass, a knife, a pen, a lockpick, a diary and a few grapes.

Kerry Clayton, Fife.

Ithink your trouble is that you are wasting your life playing silly games and not enough time chatrung up girls in pubs. Go round to the Maggie Tavern and get an eyeful of the barmaid; she's a girl worth getting to know. Remember that diamonede are a girl's best friend, so before she'll give you what you badly need, you'll have to give her what she wants. Isn't hertoring a wonderful thing.

FUTURE WARS

We are total 'metroid' RPG enthusiasts having struggled with and completed games like Operation

Amen, or, Yes, an interesting place would be instant recall, like this?

Once again the bat on the wall says it's time for bed, so I must love you and leave you. One final thought girls: any women who want to be the equal of men, is seriously lacking in ambition!

Write down your little but not unimportant problems and send it in a plain envelope to: 'Dear Vampyra', CU AMIGA, Priory Court, 30-32 Fairings Lane, London EC1R 5AG.

INDI DIRECT MAIL

A original and very exciting before you buy mail order you must first be confident that you will receive the product you've ordered and that the supplier will still be there in the future, should you need them.

A small order purchase from INDI is a safe and secure decision and here's why: INDI is a wholly owned subsidiary of a public company now in its seventh year of trading and specialising in the supply of computer products.

With a group turnover approaching £30 million per annum INDI have the resources and the purchasing power to offer you the best deals, deliver them next day nationwide and always be around when you need us.

No Deposit Credit 5 Years to Pay

INDI are now able to offer competitive credit facilities on all orders over £100. Payment can be over 12, 24, 36, 48 or 60 Months and includes insurance to cover repayments in the event of sickness or unemployment. All credit facilities are subject to status and application must be over the age of 18. If you would like a quote, simply call our sales line where acceptance can normally be nodded within the hour.

Express Cheque Clearance

Simply write your cheque guarantee card number, name and address on the back of your cheque and we will normally be able to despatch your order the day that we receive your cheque. Cheques, received without a cheque guarantee card number, will normally clear within a maximum 7 working days.

POWERSCAN PROFESSIONAL

400 dpi, 256 Grey scale, hand-held scanner

The Powerscan is a 400dpi, grey scale model scanner, capable of creating 256 grey scale images (on AGA machines) from a scan head capable of recognising 64 grey scales. If you own a pre-AGA Amiga (A500 or A600 for example) you will still be able to use this scanner, but it will only allow the viewing of 16 greyscale.

The Powerscan Professional does a good job on most black and white images and has a good crack at colour pictures too. At 400dpi, the results are, given sufficient time, very impressive.

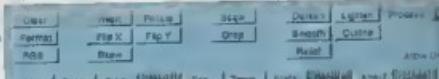

I say given enough time because there is such a large variety of drawing tools and basic image manipulation controls in the software that accompanies the scanner. For example features include picture smoothing (takes off the hard edges and removes the dots that so often plague scanned images), darken and lighten, edge outlines and bar-relief effects. These effects are complemented by a selection of drawing tools which allow you to make pixel corrections and changes to your scans. These tools vary from freehand to fill and shape (box, circle etc) drawing. You can also add text and colour if you wish.

With Power's reputation I expected this scanner to be a good all round product, and in most cases it meets these expectations.

There are, however, a few problems. For instance, the hardware interface box, which plugs into the parallel printer port of the Amiga, blocks access to the RS232 serial port. If you use the scanner with a serial printer you have to disconnect the scanner interface before using the printer! Another problem is the sluggish response times to user interaction from the software (at times, the response to keyboard and mouse activity was so slow I found myself wondering if I'd actually pressed the mouse button!) This is most obvious when entering dimensions for the scanning size requests!

Nuggets aside the Powerscan Professional is a nice hand-held scanner, which, if given time, can produce some very impressive results.

Power Computing Ltd, 44a/b Stanley Street, Bedford MK41 7RW, Tel: 0234 273000
Price: £119

DISTANT SUNS 5.0

Astronomy Program

Very few humans can comprehend the true enormity of the universe. One who did get close was Douglas Adams, author of the *Hitch Hiker's Guide to the Galaxy*. As Adams put it, "Space is big. Really big... I mean, you may think it's a long way down the road to the chemistry, but that's just peanuts to space."

Adams' words may seem rather unscientific, but it's these words that introduce Virtual Reality Laboratories' new *Distant Suns 5.0*, a program designed to allow Amiga users to roam the known universe without having to hitch a ride from a passing Voyager spaceship.

Distant Suns displays what can best be described as an interactive planetarium on your Amiga. Once you've set the date and the direction in which you'd like to look, *Distant Suns* then displays an accurate representation of the night sky. You can then click on individual stars and planets and read lots of interesting facts about them. It's perfectly possible to recreate famous events in space – the passing of comets and asteroids, the alignment of planets (the so-called "Jupiter Effect") and so on – simply by adjusting the date.

Most of us probably think of space as a rather dull place where the only interesting thing you're likely to see is the occasional comet. With *Distant Suns*, however, the night skies come alive, revealing more detail than you could shake a lamb at.

With a single click of your mouse button you can view the movement of stars, star trails, constellations (including the rather naff 'Caves Venetia' – it's just two stars joined together!) and you can even zoom around the solar system viewing the planets as you go. *Distant Suns'* rendering of the planets is well handled although the planets do look rather 'flat' as they lack any texture. Some form of texture mapping certainly would have made the planets look far more realistic.

Animation is another interesting feature of *Distant Suns*. Instead of simply viewing the skies as a static collection of stars and planets, you can create animated voyages through space by turning on *Distant Suns'* Time Lapse facility and then recording the results into a standard IFF Avim file. You could, for example, view the orbit of Halley's Comet as it passes the innermost planets of the Solar System.

Distant Suns may not be the most immediately satisfying program that you could buy for your Amiga but it's certainly one of the most fascinating. Even if you don't enjoy staring at heavenly bodies for hours (don't worry, I'm not going to crack a tired double entendre about heavenly bodies), *Distant Suns* is one of those programs that totally envelopes you in its subject matter. For budding astronomers everywhere, *Distant Suns 5.0* is a must.

DIR WORKS 2

Directory Utility

To grip with the Amiga's disk operating system without having to swot up on the Shell interface.

Possibly the most popular Directory utility available for the Amiga is INOVAdrics' *Dir Opus* 4.0 which can be found running on more Amigas than any other program. A new challenger to *Opus'* throne is *Dir Works 2* which has been expertly written by Chris Harness, the author of the infamous 'PC Task' emulator package. Chris' program looks very similar to just about every other Directory utility available for the Amiga with the usual 'Source' and 'Destination' directory listing windows accompanied by a wide variety of buttons that allow you to perform such disk maintenance tasks as copying and deleting files, formatting disks, playing sound samples and modules, and the list continues.

Nothing special so far, indeed, so let *Opus* still leaves *Dir Works 2* standing simply because of its elegant design. What makes *Dir Works* somewhat more interesting, however, is the sheer level of config-urability that the program offers – what this basically means is that if you don't like any aspect of the program (including the screen design), *Dir Works* allows you to change it! Indeed, you can even create a whole new user interface from scratch. What's more, the final result doesn't even have to be a Directory utility – Harness himself includes a demo user interface that gives full Workbench control over GVP's G-Lock gameclock!

Rating a product like *Dir Works 2* is surprisingly difficult. On the one hand it fails to even come close to the one product that it is aimed at (*Dir Opus*) but on the other hand it offers such a high level of control and flexibility that calling it a Directory utility just isn't doing the program justice. If you want a Directory utility then buy *Dir Opus* 4.0 but if you want a program that will allow you to create Workbench front-ends for any A-Flex compatible programs or AmigaOS commands, then *Dir Works 2* is worth checking out. Perhaps the publishers should consider a change in direction for the product?

AMIGA ASSEMBLER INSIDER GUIDE

Book

Following on from its successful A1200 and A600 Insider Guides, Bruce Smith Books have launched the *Amiga Assembler Insider Guide*. Written by Paul Overne, the prolific author of a number of BBS's famous *Mystering Amiga Books*, *Amiga Assembler* is a compact and easy to follow guide to programming your Amiga in its native language, 68000 assembler.

The book starts with a leisurely stroll through the basic architecture of the Amiga processor, its various components and how these relate to assembly language programming. Paul then moves onto the more practical subject of addressing modes, data and address registers and he even finds time to introduce a few basic assembly language instructions. Before you know it, you're ready to go head first into OS library calls and 'LVO' values. Personally I thought, I would have thought that it would have made more sense to have built a solid understanding of the 68000 instruction set before moving on to such an advanced subject!

The flow of the book's content is broken up still further when the book seems to take more than just a couple steps backwards by looking at how to operate the PD assemblers A68K, Blinx and HISoft's DevPac. Surely this should have been at the start of the book near the chapter introducing assemblers?

The book then moves onto more code-intensive subjects including macros, programming under Intuition and a brief overview of the Amiga's graphics functions. Documenting such a complex subject as the Amiga's operating system would obviously need a much larger book but I still can't help thinking that perhaps the author presumes too much prior knowledge from the reader. Indeed, you really need the Amiga ROM Kernel manuals to be able to follow many of the examples scattered throughout the book.

Covering the OS routines is all very well but you can't expect the reader to automatically know the parameter formats of every OS routine! In fairness, however, Paul does try his best to document many of the routines that he discusses. I still feel, however, that it would have been a much better bet to have built a more solid understanding of the language itself before getting bogged down in OS coding.

The *Amiga Assembler Insider Guide* is a brave attempt to introduce assembler language programming to the layman but unfortunately it fails to hit the mark as the language used may still be too technical for most beginners to understand clearly.

PageStream is one of the top DTP applications on the Amiga. Now Softlogik have announced version 3, claiming that it beats the legendary QuarkXpress on the Mac, and leaves Professional Page for dead! Andy Leaning takes a privileged first look to see some of the new features it will offer.

PageStream 3 EXCLUSIVE PREVIEW

PageStream has always been one of the muscular men of Amiga DTP. Heavyweight, yes, but consider how many steroids Softlogik pumped into it. PageStream never developed enough muscles to become the Arnold Schwarzenegger of Amiga DTP software. Now, however, with the imminent release of version 3, PageStream may be ready to kick all over the competition.

PageStream has changed considerably from its original design. When first released on the Amiga, it was more or less a straight conversion from the Amstrad ST implementation. Over the years, however, Softlogik have adapted it to look and behave more like a proper Amiga application.

Some paragraph formatting has undergone some subtle but significant improvements.

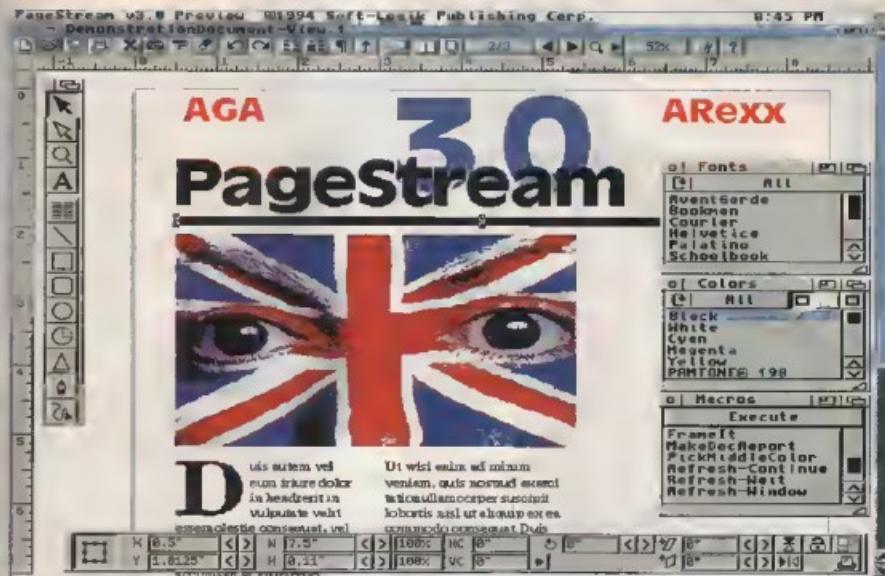

ALL-IN-ONE AND ONE-IN-ALL

At £299, PageStream 3 may seem at first, even expensive, but before putting your credit card back in your wallet and going home consider what you will get in your money. PageStream 3, the package, is far more than just a DTP program.

In addition to the page layout program, you also get a bitmap graphics editor, RME, for creating and editing pictures, a fast editor called PageEdit, and a whopping collection of over 50 fonts. Although £299 may seem high, you will get everything you need to create documents with and as such it has to be good value. And of course, existing users will have an upgrade path, which will allow you to upgrade for less depending upon which version of PageStream you have.

NEW LOOK

On loading PageStream 3, it's obvious that the new version is more than just an update to keep up with developments in Workbench refinements. Instead Softlogik claim the program was completely rewritten for the new version. Although the familiar menu, window and drawing tool pallets remain, the new incarnation has a completely new command toolbar - a feature that's becoming increasingly common on Amiga applications. Many of the most popular commands are available as buttons, providing access to options such as Undo, Redo, Cut, Copy, Paste, Change Page, Magnify, Open, Save and Print. The

PageStream before and after. PageStream 2 versus PageStream 3. Notice the new tool bars and edit palette drawing tool palette (called the toolbox) can also now be customised, changed to lie either vertically or horizontally and can be displayed in two different sizes (like Wordworth 3).

The Edit palette provides information on objects etc such as the position, width, height, and rotation angle of objects. You can edit all the settings via the palette (rather than working your way through menus), which can be automatically increased and decreased via "orange" arrows. Anyone who has used QuarkXPress will recognise the power and speed that this window will bring to PageStream and it is, in my humble

opinion, perhaps the single greatest improvement to PageStream as it allows experienced users to edit and change their documents far faster than previously possible.

A 4000 or A 1200 owners will now be able to see pictures in full colour. Although a major upgrade to

PageStream, this facility has been available on ProPage for some time, and isn't really that significant, although it's still a welcome improvement!

LET'S COMMUNICATE

PageStream has always had the potential to do better at communicating with other programs than almost any Amiga application. Boblight was one of the first Amiga developers to use modules for importing and exporting files from other programs whilst the hotkeys feature allowed PageStream to automatically update titles in a document as they were changed in other applications.

With release 3, however, things have gone even further. Amiga users will swoon when they find that at long last an Alexx port has been provided, dear y'all, it is full command es!

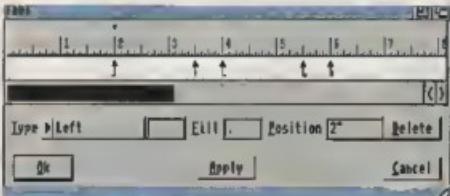

It's been a long time coming, so worth the wait! This import module has also been enhanced, with the ability to read text (with the style and attributes intact) from FinalCast, FinalWriter, WordWorth, and PreWrite to name just a few. Perhaps the most dramatic feature however is the ability to import PagePlus files, the man who also documents the inherent concepts between the two programs and also provides on-line help for PagePlus users!

Assuming all these features make it into the final version, PageStream could well become the Alexx of the text and DTP market - the software in Sie converters.

PRODUCTION

If you use a DTP program for serious work you'll probably miss some of the advanced document handling facilities found in QuarkXPress on the Mac and PC. For example, the problem of not knowing what files, fonts and graphics are used in a document. A classic instance would be going back to edit an advert or flyer sometime after it was originally created, only to find that when printed the pictures are missing, or you haven't got the correct fonts installed. Previously, the only way around this predicament in PageStream was to wade through the document looking at every font and picture, to reinsert them. This got more difficult as the number of fonts and images increased.

Quark users have long had the benefit of simply being able to call up a list of the fonts and pictures used in a document, but there's never been a similar facility in any Amiga DTP package. Until now, that is. PageStream has requested telling you exactly what fonts, pictures, and stories are used in

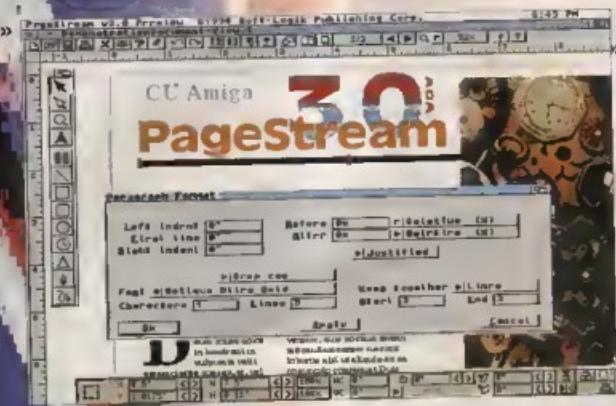

Text blocks can now be set very easily precisely where you want them - you can also choose to fill the text spaces with a character of your choice.

a document and where they are! Even better for frequently-used lines, the program keeps individual revision numbers so you can be sure that the file you are editing is the most recent.

The applications tool for long documents has also been dramatically overhauled. Now not only are there tools for formulating the contents of documents over one page (chapter/subchapters, chapter numbering, automatic indexing and table of contents) but also a massive number of structural layout editing facilities which can be used to manipulate the location of pages, double page spreads and master pages.

To long-time PageStream users many of these will seem like a welcome come true. You can, for instance, now change the objects on a master page for each individual page without affecting others, and join two single pages into a double page spread.

Softbox have a long list, followed the rest of the DTP industry and adopted Pantone colours. The Pantone system is a means of

WHAT'S ON THE TOOLBAR

PageStream's new Toolbar is shown. This new addition to PageStream's already extensive toolbar provides a quick way to access and increase the speed of operations at many of the most frequently used menu commands are now instantly available through a button.

New: Create a new document.
Open: Open an existing document.
Save: Save the current document.
Print: Print the current document.
Cut: Cut the selected text or objects.
Copy: Copy the selected text or objects.
Paste: Paste the clipboard contents.
Delete: Delete the selected text or objects.
Undo: Undo the last action.
Redo: Redo the last undone action.
Link: Link existing text frames.
Unlink: Break the link between linked text frames.
Paragraph: Set the paragraph formatting.
Tab: Set the tab stops.
Line/Fill: Set the line, fill and color of text or objects.
Facing Pages: View and edit two pages side-by-side.
Edit Page: Edit the page setup and choose the master page.
Go To Page: Choose a page to view and edit.
Previous Page: View and edit the previous page.
Next Page: View and edit the next page.
Custom Scale: Set the view magnification.
Execute: Execute and edit PageStream macros.
Barcode: Create the online help system.

Objects: Objects, move, resize and manipulate objects.
Reshape: Manipulate paths, crop EPS, pictures and drawings.
Magnify: Increase and decrease the view magnification.
Text: Enter, select and manipulate text.
Column: Draw text column objects.
Line: Draw diagonal, horizontal and vertical lines.
Box: Draw rectangles and squares.
Bounded Box: Draw rounded rectangles and ovals.
Ellipse: Draw ellipses and circles.
Arc: Draw arcs and pie slices.
Polygon: Draw regular polygons (triangles, hexagons...).
Pen: Draw connected paths by clicking lines and curves.
Freehand: Draw connected paths by sketching.

Left: PageStream 3 is in 8B Tie glory. Note the drop cap reference to the paragraph format requester

specifying a colour via reference numbers that denote how the colour is made up from Cyan, Magenta, Yellow and Black components. Using these numbers you will be able to generate exactly the same colour no matter what system you create, output and print your documents on Panlone as it's a true industry standard for colour repro and its inclusion in PageStream is well overdue, but very welcome.

Along with the new look and improved production aids, the programmers have also incorporated a number of new graphics tools and page creation aids. Sadly, there are far too many new drawing and object handling abilities in the program to do them all justice in the small space available here, however, as is faster, objects can now be placed across page spreads, graduated colour fills are now available, variable shaped text frames (rather than just square/rectangle) can be created and edited, objects can be anchored to text, drop cap creation and automatic scrolling pages as you drag objects near the window edge.

LOGIKAL UPGRADE

I've known Softlogic for a great many years, being one of the very first people in the UK to see the original versions of PageStream almost five years ago. Back then it was called Publishing Partner Master and was released on the Amstrad ST.

When Softlogic originally released PageStream it was nice to look at, but get in close and you'd end up getting frustrated with some of the features.

PageStream has now grown up. Providing Softlogic releases PageStream 3 in a bug free state they've got a winner, and one which will take GordDisk a long time to catch up with if at all.

Contact: Meridian Software Distribution Ltd,

Tel: 061 543 3500

NEW FEATURES IN BRIEF

Typographic Text Handling

- Automatic drop caps
- Automatic justified paragraphs
- List levels in a document
- Variable shaped text frames
- Hanging Punctuation
- Bezier grid

Word Processing

- List arithmetic in a document
- Cut lines (flat tabs)
- Smart quotes & dashes
- Show/Hide Invisible characters

Graphics

- Bezier Control
- Bezier picture trapping
- Bezier pictures in color (AA support)
- List all objects in a document
- Split drawing into paths/regions
- Extend objects across page spreads
- Color gradient fills
- Fill line circles with a fill style
- Merge overlapping drawing paths

Interface

- Toolbars for fastest menu commands
- Edit path in object coordinates etc
- Drag paths to scroll
- Auto scroll
- After Support

Layout/Align

- User defined grid colors and grid strength
- Adjustable ruler offset and zero point
- Mix measurement in system fields

Page layout handling

- Chapter numbering & Automatic indexing
- Anchored objects to text
- Combined frame numbers
- Chapters and subchapters

Color & Printing

- Pastel colours
- Trapping
- Plate control
- Separate printout of collective items
- Print empty pages option

File Management

- Revision numbers
- Job numbers
- Auto-save

ImageFX is one of the most powerful image manipulation programs on the Amiga, and is a contender for the crown of graphics applications. Andy Leaning has an audience with a possible future monarch and tries out the new version.

The ImageFX application tool allows the user to load and save images in various formats, and to generate impressive results.

IMAGE FX

ImageFX is one of the premier graphics and image processing programs on the Amiga. In fact, there is very little it won't do. Now GVP, its publishers, have released a new version which upgrades many of its features.

When originally released, ImageFX took the Amiga market by surprise. GVP are a company better known for hardware, in fact, with the exception of the software supplied with their hardware products, they had never previously released a software title.

Then suddenly GVP introduced not just one but two applications, ImageFX and CineMorph. Sadly CineMorph, GVP's attempt at video special effects, although popular was never destined to be one of the big sellers of Amiga software. ImageFX, however, was quite the opposite and quickly became the mainstay for graphically-oriented users.

Now ImageFX has been upgraded, and from the look of the packaging alone ImageFX

1.5 has all the hall-marks of a major Image application. It's all there, huge box, thick manual and loads of disks (four of them in all). Starting couldn't be easier. All you do is pop in the first disk with the install program. This is a standard Commodore installer which takes you through the various options and away you go.

CHOC A BLOCK

Once it is set up and running, the size and scale of ImageFX is amazing. Not only does it have most of DPaint's drawing and painting tools, this program also has a huge selection of Image composition, manipulation and processing functions, the like of which only ImageMaster could only hope to compile with.

Budding artists will welcome the support for numerous types of hardware such as graphics cards, scanners and frame grabbers. This wide selection of hardware input devices ensures that

DO YOU GET MORPH FOR YOUR MONEY?

Cinemorph is GVP's other attempt at stand alone software. It is a software application that lets you create animations where one image is magically converted to another. Cinemorph offers some neat features in films such as 'Fermat's Last Theorem' for so many other advances.

With me I'm writing an about Cinemorph in a review of ImageFX. Simple, Cinemorph is included in the price, as I only have ImageFX been upgraded, but no has the special effects program.

The new version of Cinemorph doesn't include any major leaps in new features, but has been tweaked internally to take advantage of the AGA chipset and Workbench 2.0, and also make Cinemorph faster - particularly multi-regression analysis.

Whether these improvements will see their way into the classic is anyone's guess. Cinemorph was undoubtedly the fine of the article going to press.

Main pic on page 196, above and below are all examples of some of the various effects possible with ImageFX.

SAVE TO BE LOADED

Just like *AdPro* ImageFX's module, allowing you to add, load and 'save' as you wish. Loaders and savers allow the program to read files other than its own, letting you process and still artwork created in foreign programs. You could, for example, save a picture in say, Windows Paint, then load it, make some changes in ImageFX and finally save it in MacPaint format ready for further editing on the Mac. Unlike *AdPro* however, yes get a great many loader and saver modules with the program, you don't have to rely on them at a later date. With the program, there are some 30 different loaders/savers modules available. These include the common (.GIF, JPEG, PCX, TIFF, ANIM (FF including 24-bit, DICV, Raster, HAM-8) and that is common (Alsa, OPIE, BMP, Flick, HAM-16 and that is common (Alsa, OPIE, BMP, PBM, PGM, Rastifilt, Targa, IFF FAAX).

There are also plans to release further loaders shortly, and as with all software developers are always looking into writing more loader and saver modules.

You should have no problem getting raw pictures material into ImageFX for further processing. And if you already have your digitised artwork in a computer file, the program will allow you to convert and save them back out thanks to its ability to read and save over 20 different file formats.

ALL TOOLED UP

Other tools include pens, draw (more of this later), airbrush, smudge and finger-paint, freehand drew, line and arc, rectangle, ellipse, polygon, eraser, test oil and fill. The draw modes have been updated,

this facility, allows you to copy and paste items from one area of a picture to another whilst drawing and painting. You can, for instance, paint in third eye on a face, and because you are drawing with pixels picked up from the original eye you can get far better results than a straight block copy operation would provide - wonderful!

There is a facility very similar to Paintshop in Photoshop on the Mac and PC, and provision in ImageFX is very welcome. It gets better, in addition to these drawing and painting tools you can

SHELL SHOCK!

In addition to controlling ImageFX with the mouse, you can also employ a dedicated ImageFX command shell. This allows you to access most functions in the program via its two last command sequences.

You may ask why such a feature has been incorporated into the program - and the answer is more what is found to cause endless arguments. For experienced users the ability to type in commands will provide a faster method of operating the program than using the mouse or keyboard. As you probably don't believe it, neither did I. In the past, I'd consider titles in the title bar to move the mouse to the scroll bar, click on it, move through several segments and then finally select the desired option. But type away and have typed a few keys and achieved the same thing. And for straight file operations etc, this is all that's needed - so it does work off position!

also feather the edges of any new drawing. Edge feathering links the edge of the new drawing and blends it into the background image. The blend lasts for a specified number of pixels from the edge, either away from and into the new drawing area. Using this facility you can mix new elements into an existing picture without any of the rough edges that normally occur.

FABULOUS FEATURES

Alongside the actual drawing and editing facilities are a whole bunch of other tools which I lump together under the title of Image composition and manipulation functions. Facilities include making changes to the colour space of a picture including changing the colour components, and a vast number of other snap-happy effects including Motion Blur, Sharpen and Unsharp Masks, Dynamic Range, Wave Distort, Oil Transfer, Implosion, Explode, Black Hole and Spiral to name just a few.

The composition functions are both powerful and flexible. Composition is the process of taking one image and combining it with all or part of another image and forming the basis of a large number of image effects. ImageFX provides a great many different ways of combining images. The main image can be the screen, whilst the composition can be a buffer. Once the two images have been set up you can then apply a merge, matt, addition, subtraction or Image Map composition to combine them.

Merge combines two images using active palette of tools to make up the final. Matt will replace any colour in the main image palette with the contents of the buffer and you can specify both the colour and how close to it other colours should be before they are replaced with the buffer image data. Add and Subtract will add or subtract the value of the buffers to the pixels of the main buffer, this makes bright pixels brighter and dark pixels darker. The Image Map paints the hue and saturation of individual pixels in the main buffer with those of the swap buffer without touching the contours and textures of the main buffer.

All these functions, and indeed all other commands in ImageFX, are yours at the touch of a button. Different choices are selected through an Action Choice. These choice of tools are a way of allowing you to select one of the different options, but also showing you the next option in the cycle by clicking the button. The next option in the cycle is:

The cycle of functions has been changed slightly from normal Amiga 2000 240000, but as you can now move forwards and backwards through the cycle, last, first, last, first, the cycle list are selected from an ageing tool bar which lies across the bottom of the screen, from this tool bar every feature of the program is controlled - there are no menus in ImageFX.

PROBLEMS

GVP, have on the whole, got it right. However, a couple of areas that could be improved handling could be easily enhanced. A requester asking for text is not particularly outstanding. But, what really lets the program down, is the fact that you can only enter one line of text at a time. Some of the requesters are not overly intuitive or helpful either. Another annoying oddity is the inability to specify a magnification level - yes you can magnify up and down on an image but you can't set a percentage

CONCLUSION

ImageFX 1.5 is a diamond of a program. It shines in practically every respect, making other applications look like cheap gemstones by comparison. But unlike the average Diamond, it isn't expensive, in fact, it's an exceptional value for money given the price of similarly capable applications on Macs and PCs. All that remains is for GVP to file on some of the rough edges and ImageFX will become the crown jewel of Amiga graphics programs.

Owners of previous 1.5 should get the new version immediately, admittedly it is not a major upgrade, but the subtle changes make all the difference in the world.

PILE ON THE ADD-ONS

ImageFX 1.5 supports a massive range of hardware add-ons in the Amiga. These can broadly be broken down in to five categories:

1 Input: ImageFX supports the following input devices: Egonic PS/2, YUAN and Sharp AX1000 mouse, IV24, Framegrabber 256 and PP45 frame grabbers, digitising tablets.

2 Viewing: ImageFX can render Images into a viewing area for all major Amiga screen savers and enhances graphics cards, including the AGA and HAM-E, DICV, FraCatcher V24, OptiPanes and EGS.

The new version 1.5 features a viewing mode called *ScreenAmp*. This lets ImageFX expand any ScreenMode that is defined in the Amiga Display Database (as found in Workbench 2.1 and higher).

SILICA £149.99

■ **WDRKS ON ALL AMIGAS WITH 3MB RAM HARD DISK HIGHLY RECOMMENDED**
SILICA SYSTEMS, 1-4 THE Mews, HATHERLEY ROAD, SIDCUP, KENT, DA14 4DX.
TEL: 081 309 1111

EASE OF USE

Some of the requesters are a little unclear, and the raw user interface graphics can prove a little daunting.

VALUE FOR MONEY

Only £149.99 is a lot of money, but you get a lot for it. ImageFX is a bargain.

EFFECTIVENESS

For image manipulation, graphical, video converter and digital editing ImageFX does a brilliant job.

Flexibility

How much more flexible could you want?

INNOVATION

Provides some truly innovative features for Amiga graphics package (edge softening, photographic etc). It is good to see someone bringing new features to the Amiga graphics market.

A graphics package to rival those on the Mac and PC.

Yabba Dabba Doo! Tony Horgan tries his hand as a cartoon film maker with Empire's new animation package.

Until now there were two main choices for Amiga cartoon animators: Movie Setters and Deluxe Paint - both very different, but both very capable. Hanna Barbera's Animation Studio now offers a third alternative: taking a more traditional approach to cartoon animation. Rather than for an all-out bells and whistles extravaganza, the designers have decided to make Animation Studio as easy to use as possible. Maybe inevitably, this means that you won't find effects or ground breaking features. Instead, the emphasis is on simplicity with a color-coded icon system replacing the normal Amiga menus.

SOFT CELL

Unlike Deluxe Paint, Animation Studio splits up its frames into two parts: still backgrounds, and animating backgrounds. Each animation sequence just one backdrop over which all the action happens. The foreground frames are created on a separate screen, and then overlaid on the background. Once you've created your first frame or cell, you can move onto the next. Thanks to the " onion skin" feature, which means that the previous few frames show through as progressively lighter images behind the current frame, this is essential when you're moving a character or object across the screen, in order to get a smooth transition.

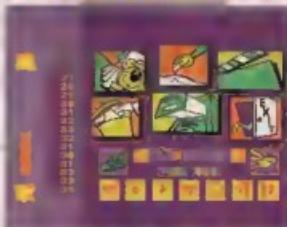

The drawing functions for creating your background and foregrounds are very simple. All you get are the basic tools: line, circle, box, freehand, fill, undo and clear. There are also seven different brush sizes to choose from. Amazingly, there's no way of loading in foreground cells or backdrops that you might have created in another program. There is no support for IFF images at all - it won't load them or save them. Even your final animations cannot be saved as standard Amiga files. An animation package that can't use IFF? Strange but true I'm afraid. The result of this is that everything you have to be created from within the program, unless you have a VIDI digitiser.

VIDI SUPPORT

The digitising sequencer is by far the best feature of the Animation Studio. Connect your Amiga up to a Rombo VIDI digitiser and a video camera and you can grab black and white images for use in your animation. Anyone trained in traditional cell animation could use this to transfer hand-drawn frames from paper or film to the screen. You should also make your own stop-frame animations, or Captain Pugwash-style cartoons using cardboard cutouts. There's more potential here than meets

Hanna Barbera Animation Studio

The whole program is encapsulated from pictures icons like these, which should make it more accessible to younger kids.

the eye, and with a bit of imagination, you could easily build some very original animations. In a matter of a few minutes (a long-bordered bootleg), I stuck and wrote a cartoon image, complete with the software, including animation frames to be digested, as well as a diamembred Fred Flintstone for you to cut out and animate.

KIDS' STUFF

Animation Studio is designed for kids, which explains the simplicity. It's easy to use, the VIDI support is excellent, the little animations that come with the package are great, and there's even a tutorial video included in the package, but it still has some major flaws and omissions.

It would have been nice to see some simple sound effects features. For example, IFF sound samples could have been triggered to certain frames. This would be an incredibly easy feature to implement, and would add a great deal to the final cartoon - after all, what is a cartoon without sound effects? Then there's the incompatibility with IFF Images and animators, which is inexcusable. Moving backdrops and multiple scenes aren't on the menu, and there's no way of repositioning your animations outside of the main program.

Animation Studio would make a good starting block for young animators who don't want to do anything more than construct a short cartoon sequence over a still backdrop. It's certainly not a rival for Deluxe Paint.

If you want powerful paint an animation you know where to go. If you want to give your little ones a chance to make their own cartoons, then this is definitely a better bet.

EASE OF USE

★★★★★ 90%
The way to the program is simple, and everything is controlled from a few picture icons, and there aren't any tricky features to cope with.

VALUE FOR MONEY

★★★★★ 70%
It's relatively cheap, but then it's not exactly packed with features.

EFFECTIVENESS

★★★★★ 75%
Effective at putting together very simple cartoon effects, but not capable of much beyond that.

FLEXIBILITY

★★★★★ 65%
Not very flexible at all. No IFF support, very basic cropping tools, no animation features, no branching, no sound, static backdrops... .

INNOVATION

★★★★★ 70%
The VIDI digitiser feature is interesting, but there's nothing else.

A very good starting point for kids, but otherwise limited.

OVERALL

This month we've joined forces with Commodore to bring you the biggest competition yet! (probably!)

If you're a regular CU AMIGA reader you'll know how impressive the CD32 games console is. With its state-of-the-art 32-bit internals, near photographic quality graphics, stereo sound and Amiga compatibility the CD32 can play some really impressive games.

For gameplayers the CD32 is simply unrivalled. Whilst other console manufacturers announce new super consoles the CD32 is already out and about, and it is true 32-bit system to compete with the new models from Sega, whenever they arrive.

But it's also got a lot more. If you've read the review of the CD32 FMV module in our February issue and the review of the first FMV films in the May issue you'll know how stunning Commodore's CD32 upgrade is. If not, take our word for it, with a CD32 and FMV module home entertainment will never be the same again!

Wire up the CD32 and you can watch top films like *Patriot Games*, *Star Trek* and *Black Rain* with better than video quality pictures, CD sound, and perfect digital freeze frame - amazing!

You're probably already thinking about buying one of these amazing beasts. Let's face it, with a new price of just £249 for the CD32 and £199 for the FMV card there's never been a better time.

But how would you like to win both of them right here? Thanks to Commodore we've got three of these stunning combinations to give away, all you need to do is stand a chance of winning one is answer these three simple questions:

1. How many games are now available for the CD32?
2. What does FMV stand for?
3. How much is the CD32?

Now put your answers on the back of a postcard and send it to FMV FOR ME! CU AMIGA, Priority Count, 30-32 Farringdon Lane, London, EC1R 3AU.

RULES AND CONDITIONS

1. This competition is not open to employees of EMAP or Commodore.
2. The closing date is 31st June, 1994.
3. The editor's decision is final, and don't bother trying to bribe him (unless you've got lots of money!)
4. No correspondence will be entered into.
5. Multiple entries are not allowed.

WIN WIN WIN

With love at these CD32 winners and FMV modules you can... your books off at home now!

Look in a training session for...

CD32 - THE ADVANTAGE!

• 32-bit technology
CD32 is the only 32-bit games console available! The CD32 is as powerful as the games console Sega HX (expected to release later this year, but it's here now).

• Near 24-bit graphics
CD32 games use laptop-quality near photographic graphics!

• CD Quality sound
CD32 games have sound and music just as good as CD music. In fact, it's the same!

• Millions of games
There are already over 80 games available for CD32!

FULL MOTION VIDEO
In addition to the exciting games you can play with your new CD32 you'll also be able to watch narratives and pop videos on compact discs as well. There are already five top feature films and many pop videos available in FMV format and loads more are planned for release soon.

MEMORY BOARDS Challenge

John Kennedy takes the current batch of A1200 memory cards for a spin around the block. Which one makes it back first? Read on and see...

I don't take an A1200 owner to realize that they need more memory and more speed. A hard drive may solve the 12 disk dance of memory which certain Word Processors impose, but if you've tried using large pictures you'll know by now that simply adding some memory to the trapdoor expansion slot will have the added benefit of freeing up the graphics (or "chip") memory and boosting performance.

Programs will automatically load into the "fast" memory, and a doubling of the standard A1200's speed isn't unknown. Some memory cards will improve things even further by including an FPU (or Floating Point Unit) on the card. Maths intensive programs, such as ray tracers or fractal landscape generators, will use the FPU to cut processing times still further.

DEAL THE CARDS

The two latest cards to come into the CU AMIGA testing labs are the Amtek Hawk and the Blizzard 1220. Both promise extra memory, a real time clock and a good injection of steroids to boot. Both fit into the trapdoor expansion of the A1200, and so the on-site warranty is therefore left intact.

The HAWK card is quite large, mainly due to the inclusion of a single SIMM socket. Using memory in the SIMM package means that upgrading can be done in steps, from 2Mb to 4Mb to 8Mb. Unfortunately, the provision of only one socket means that you'll need to throw away the SIMM that's already present when it comes to upgrade.

The size of the HAWK makes fitting a little fiddly, and it certainly looks a lot less hi-tech than the super slim leatherlike Blizzard. The Blizzard is a half height trapdoor card, which comes with 4Mb of RAM surface mounted. Another 4Mb can be added by clipping on an extra card which fills the remaining trapdoor space.

TESTING TESTING

In use, the HAWK turned in a rather poor set of figures. Compared to the older Power PC1204 it flagged badly, and even fitting a jolly fast 68882 FPU didn't give it too large an improvement over the Power board's 14MHz chip. By comparison

the Blizzard nearly flew off the desk. The blurb on the box promised a huge speed increase due to an "automatic memory clock doubler", something I originally put down to advertising license. However, the results from the tests were so good I removed the card to get a better look. Guess what? There in the corner was a 68020 processor, clocked to run at twice the speed of the original 68000 fitted to the A1200. Obviously Motorola 68020s are getting pretty cheap these days.

Frighteningly, the Blizzard card ran faster than my A4000/030, which leads to me think (a) svil thoughts, and (b) the original A4000 isn't as good as I first thought it was. Perhaps CBM will send me a new A4000 Tower as a goodwill gesture.

In conclusion, the Amtek HAWK is definitely "just another memory board", and not a very good one at that. The Blizzard on the other hand gives some bargain 68030 cards serious competition. If you can live without the MMU which full 68030s can come with, it could be best way to get A4000 performance from an A1200.

TEST DETAILS

In the test on the right, both versions (Intenger and FPU) of Imageine were used to render exactly the same image on various Amiga systems. The result given is the length of time in seconds which the computers took to perform the render. Amazingly, and to my great jealousy, the Blizzard

once again outperformed my 68030 based A4000, rendering faster than it. With a FPU, the Blizzard would be unstoppable.

SymInfo was used to obtain a MIPS (millions of instructions per second) and FLOPS (millions of floating point instructions per second) speed. SymInfo was also used to measure the speed of the 3.5 inch hard drive fitted to the A1200. Note how extra memory increases the drive speed (bytes/second). Finally, check out the results below.

ACCELERATOR CARDS

| | Intenger | FPU | SymInfo |
|----------------|----------|------|---------|
| INT | 179 | MIPS | FLOPS |
| A1200 | 279 | N/A | 649 |
| A1200/Power | 169 | 143 | 1,101 |
| A1200/Hawk | 192 | 134 | 652 |
| A1200/Blizzard | 98 | N/A | 1,120 |
| A4000/030 | 110 | 889 | N/A |

TEST MACHINE SPECIFICATIONS:

- A1200, Standard A1200 with no extra memory or FPU

Sharp DV-3750H

Andy Leaning looks at a cheap alternative to buying a flash and expensive monitor.

Does your family take particular satisfaction in watching *EastEnders* when you really need the TV to play *Cheat Engine* on your CD32 or will a letter to the *Frontier* fan club on *You Are A2007* Yes? Then why not kill two birds with one stone and invest in a secondary TV? You'll be able to play and watch what you like – and feel your siblings to get lost whenever they want to watch it. With this in mind I took it upon myself to check out one of the sharpest TVs available, the Sharp DV-3750H TV.

It would be wrong to describe this Sharp unit as a dedicated display for the Amiga, or even a monitor, it isn't. It's an ordinary, low cost TV that is now available from many Amiga dealers. And as such it can be used as a secondary TV as well as a display for your Amiga.

Setting it up is fairly straightforward. Plug it in using either a normal RF/antenna cable or the supplied Scart lead. Using the Scart lead is

MICROWITEC 1438 MONITOR

Since Christmas there hasn't been very many new Amiga compatible monitors available - in fact there's been none! Now however, a UK based monitor manufacturer has produced a monitor capable of working on all machines. Andy Leaning tried it out.

If you've tried to buy a monitor recently you'll have hit a slight snag. That isn't envy! Sighs...the low resolution Amiga models, the 1048S and Philips 8833, aren't available anymore, neither are the AGA hugging 1940 and 1942 models.

So what can you get instead? Well, since Christmas there hasn't been an obvious alternative. Still, you could get hold of PC SVGA/EGA linking monitors but trying to use these in low resolutions on an Amiga will cause you trouble.

Now, however, MicroVitec are making a concerted push into the Amiga market, with a monitor suitable for any Amiga. But is this MicroVitec 1438 monitor any good?

MONITOR MONSTERS

NON-TOXIC
Unless you happen to be wearing a NASA radiation suit, don't even consider using a monitor. Yes, the radiation levels coming out the back of your monitor will distort your DNA and turn you into a hideous mutant like all of which could only be matched is the nightmares of our very own Teoy Ollilan!

Seriously, the remarks regarding the amount of radiation coming out from the reactors have been doing the rounds almost as long as reactors have been used! Is reality, monitor radiation is at low levels (less than people believe). But if you are worried about such things, or environmental concerns, you'll be pleased to know that the Hibernia/Vic addresses several of these issues and complies with the Swedish MPB II standards for environmental standards. It has also passed stringent tests by ENEC (directive 89/686/EEC), passing both EW 28241 Part 1 and 2 and 28242.2 (see [this link](#)).

Well, where looks are concerned it's certainly no super model, but it's also no worse than any other monitor on the market. It quite happily sits on top of an A4000, and whilst being slightly larger than the now sadly extinct 1084, it should fit on most tables, computer desks and shelves (or whatever else you might be using it). Its colour scheme (being white with a hint of Commodore-Grey) will go nicely with most Amigas, whilst the tilt and swivel base will allow you to position the screen conveniently for most locations.

Connecting it to the Amiga is slightly more difficult than other monitors but is still easy enough for even the most inexperienced of users to handle. However, the monitor was designed for use with

SILICA SYSTEMS, 1-4 THE NEWS, MATHERLY ROAD, SIDCUP, KENT, DA14 4DX. TEL: 081 309 1111, OR MOST OTHER DEALERS.

EASE OF USE  80%

You shouldn't need to mess around with adapters when you're reading e-books. The Kindle's simple interface makes it easy to use.

VALUE FOR MONEY 90%
Not brilliant, but good value for money, and pretty cheap.

EFFECTIVENESS  85%
Does what you'd expect and does it well, although it should have internal speakers.

FLEXIBILITY 83%
Handles all Amiga screen resolutions. What more could you want?

INNOVATION  80%

Any Amiga owner would appreciate this monitor. Solid, reliable performance: does everything you'd want.

OVERALL

84%

recommended as this will give better quality pictures than a normal aerial cable. You'll also have to use the Scart connector if you have a higher end Amiga, such as an A4000, as these don't have TV modulators (the slot where the aerial cable normally goes).

This is really a television, which means that it doesn't automatically display the pictures from your Amiga. To do this you must first tune it in. This isn't hard to do (it's the same as having to tune in a video recorder) as the remote control has buttons for searching and it's simply a process of selecting the audio channel search and letting it hunt through the various channels until you can see the Amiga display and hear the sound. Then all you need do is fine tune the picture (although this may not be necessary) to get the best results and you're away.

Given the higher price of this unit compared with cheaper models available it would have been nice to see some kind of channel number indicator while searching. Instead of the usual on-screen display which simply consists of a row of dots, along which an indicator bar moves as it changes channels — I mean, it could be a lot more informative.

ARTHUR, MICHELLE...

Having tuned in there's not a lot else to it. Contrast, Colour, Brightness and a picture sharpen mode (picture tone) can all be controlled via the remote control, but there aren't any buttons on the front of the set. This last point actually proves quite annoying after a period of time as you often need to change the brightness and contrast and rather than just leaning forward and pressing the button, you

need to keep the remote control close by. Given the misused use with an Amiga, and that most users will therefore be using it at close range (and would simply be able to lean forward to change the contrast etc) it is strange that most dealers have chosen a TV that doesn't have these controls within easy reach, requiring instead, as it does, what you have to lean around for a remote control, which will frequently disappear under a stack of paper work!

The pictures are bright and clear, and the sound respectable. The only slight niggle I had concerned the sound. It was a little too end leathed depth. Also the review sample had a minor fault in the tube producing a slight blurring at the top of the picture; this glitch was only present on the final review sample and didn't appear on others I checked. Other than that there was little to fault with this product.

GRANT AND PHIL

This Sharp TV presented me with a problem. How can I describe it? It offers pretty standard picture quality (for a TV), reasonable sound reproduction (a little on the thin side) and is fairly simple to use.

If you are in the position of sharing the family TV, and the evening entertainment is a choice between Eastenders and Microcosm then the Sharp TV could be the answer. It provides a simple, cheapish, alternative to the main family box, and in this light does it well out to. As long as you don't buy it expecting to get a display that's superior to a TV's then you won't be disappointed. 

PC, which explains why the cable coming from it has a 15-pin D type plug on the end (standard for PCs) which won't directly fit into the Amiga 23-pin monitor port. To solve this problem a conversion cable is included, which goes between the two, providing a 23 pin plug that can then be fitted into the Amiga's monitor port — just fit the conversion cable in place and away you go.

In display terms the monitor can handle all Amiga display resolutions, from low res, through ECS productivity, and up to and including AGA resolutions. As such it is a considerable improvement upon the 7084 and 8833 (which couldn't handle the new AA chipset resolutions of the A1200 and A4000), whilst also offering a slight improvement over the older Commodore 1940 and 1942 models which couldn't handle the Super 72 mode.

But what about picture quality? Well, the 28 dot pitch ensures that all pictures are crisp and sharp, which means that gemspotters will appreciate the clear, well-defined detail on screen and clean colours. Serious users will find the quality even more pleasing, with all resolutions displayed sharp and well focused.

For reliability and stability we cracked the monitor through a battery of tests to identify various flaws in the monitor's design. These all showed that the 1438 is built to a good standard, intensity, image size regulation and colour accuracy trials all produced results that more expensive monitor manufacturers would be pleased with.

The only minor glitch in the display was that incular tube produces a slightly dark image, resulting in slightly dim colours, but this can be corrected by increasing the brightness. Overall, colours and picture quality are clear, sharp and clean.

One major omission in the 1438's specification is speakers, or rather lack of them. This isn't really surprising as it was originally designed for the PC market and as basic PCs don't have very good sound capabilities, PC monitors haven't until very recently needed them.

On the Amiga, however, it's a different story, and any Amiga monitor should have built-in speakers. However, don't give up just yet. Most dealers that are selling the MicroVideo are providing speakers with it, and in several cases they are including them free so you'll still be able to hear the latest CU Amiga OEMed samples on 3.5" cover disks!

This is a fine monitor with decent picture quality. It does practically everything you'd hope for and its internal circuitry is well put together. It is also priced very fairly for what it offers. It would have been nice to have built-in speakers, but as some Amiga dealers provide external speakers with it at no extra cost anyway this isn't a big problem. All in all this is a peripheral that is worth purchasing if a monitor starved world.

Sony Ericsson

1-D6/A6-A6,-(A7) ;0757

The Amiga may be one of the most powerful computers ever, but how do you go about programming it? John Kennedy looks at the current batch of coding tools for DIY fans.

Almost, programming the Amiga may seem to be an impossible task. The Workbench may be user-friendly, but the Amiga can sometimes appear almost impregnable to would-be programmers, leaving its excellent graphics and sound hardware totally out of reach.

Older computer users will probably remember a time when home computers came with a programming language (usually BASIC) built-in, but how the younger contingent of users may look at games such as *StarDust* and think, "How could I ever start to write something like this?"

Thankfully, rolling up the sleeves and getting into the Amiga needn't be difficult, and there is an ever growing number of ways of doing it. From the politically correct Pascal to the hard-hitting Assembler, possibly the only language missing from the Amiga developer's toolkit is COBOL, and there shouldn't be many tears shed on that front.

Still though, the novice Amiga programmer is faced with many decisions: Which language to use?

What reference books are needed? Is it expensive?

WHAT IS A PROGRAMMING LANGUAGE?

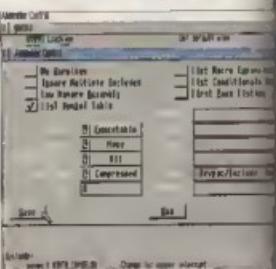

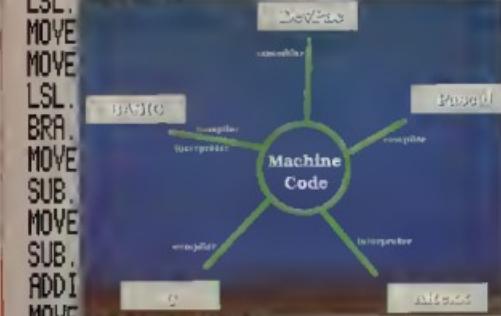

At the heart of the Amiga is a micro-processor. The micro-processor unit (also known as a CPU – Central Processor Unit) is the chip which controls the rest of the computer. The video display, the disk drives, the keyboard, all these devices are controlled by other chips but all are orchestrated by the CPU.

In an Amiga computer the CPU runs a program, a list of instructions, called the Operating System. The Operating System (OS) provides a way of loading and running application programs, including the Workbench environment, as well as games and utility programs. The OS makes it easy for these programs to share the computer's resources, such as memory, disk access and use of the parallel and serial ports for input and output. The OS handles internal chips in special permanent memory chips called ROMs, and is also partly loaded from disk at boot time.

In order to create your own programs, you need to produce a list of instructions which the CPU can understand. These instructions are called Machine Code, and they are the only instructions the CPU can work with. Every program must be converted into machine code at some point in order for it to be executed.

It's possible to program directly in Machine Code using a program called an Assembler, such as HiSoft's DevPac. DevPac will allow you to enter a list of assembly language instructions which it will convert into machine code ready for execution.

It's almost an understatement to say that programming in Assembler is a very time consuming task. Something which can appear very simple, like displaying a letter on the screen, can take many, many lines of

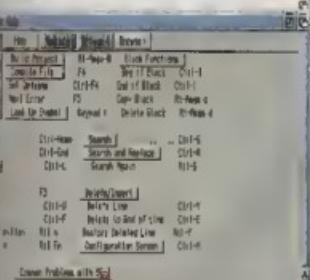

All aspects of the Assembly – which chips your computer is using, whether the code is to stand alone or be mixed (linked) with other code – can be set from the editor.

machine code instructions to achieve. The next step up from *Assembler* in the language evolutionary ladder is called *C*. A program written in *C* looks a lot closer to English than *Assembler* as unlike *Assembler* each *C* instruction can represent dozens of lines of machine code. Creating functions and subroutines is a lot easier in *C*, and it's also possible to handle complicated data structures. The advantage of *C* is that it loses hardly anything of the power of *Assembly* language, but yet it is still possible to deal directly with the computer hardware.

A C source file (the list of C instructions) must be compiled⁶ into machine code before it can be used. A typical program to do this is DICE or SAS/C.

BOOKS

If you plan on making one of the Amiga's efficient operating system, you'll need to know what makes the Amiga tick so it needs some documentation. The official works are best - make sure you get the dark grey Urban - and start off with the *Libraries* volume, as this includes general tips on many aspects of Amiga programming. The source code is three books (all in C, by the way) is widely available from many Booksellers.

With full on-line help support built-in, the GADOS writer gives even dedicated software a good run for their money.

Pascal is a programming language which, at first glance, looks a lot like C. It is subtly different though and, in fact, is a lot more 'user friendly' and forgiving. Many colleges and universities use it to teach the fundamentals of programming.

Pascal is an elegant language which tries to be straightforward as possible whilst still offering much in the way of functionality. Pascal is another compiled language, and therefore it runs quickly like C. Pascal is a very structured language – code is packaged into clearly separated functions which helps minimise errors.

BACK TO BASICS

BASIC has always been a popular programming language on home computers, and the Amiga is still well served. AMOS and Blitz Basic are derivatives of BASIC which have been heavily expanded to include many Amiga specific extensions. For example if you wanted to write a program in C to load an image from disk and display it, you would have to write many lines of code. You would need to prepare the screen, access the floppy drive, decide the graphics data stored in the file and then work out a way of copying it to the screen display. With AMOS and Blitz this can all be achieved with one or two simple commands.

The disadvantage of these

BASIC programming languages are many mos of BASIC. It's not a bad system to develop large programs in, and depending on the implementation, you tend to loose control over the finer points of the hardware. Blitz is, by default, another compiled language, so it runs very quickly. AMOS on the other hand is interpreted – it is each line of AMOS BASIC is processed one at a time. You

can buy a compiler for AMOS if you need extra speed and the capability to make programs stand alone without the need for a BASIC interpreter. ARexx is a BASIC-esque language that is supplied as standard with all post Workbench 1.3 Amiga systems. Its main purpose is the expansion and inter-connection of existing application programs – for example, adding a word processor to a Cegero ED or The Art Department with a third party video digitiser. ARexx can also be used as a programming language in its own right, but unfortunately as it is interpreted rather slowly, ARexx isn't a particularly fast language by itself. However, it is still eminently suitable for file manipulation programs and general small utilities.

There are other development systems available. Cando and Helm are two which actually use a heavily graphical oriented approach to creating programs, as well as the programs themselves. These systems are great for producing multimedia systems, such as graphic adventures or Point of Information/Sale systems.

You can even write basic file maintenance programs if you put your mind to it, but they won't run particularly quickly.

INTUITION POWER

The Amiga's operating system is an incredibly powerful and flexible system. Arguably second only to the

state-of-the-art NeXTStep platform, Intuition is a fully multitasking operating system which can be relied upon to create a reliable and consistent user interface, but only if you want to use it.

It is entirely possible that you program won't benefit from pull down menus (how many arcade games have you seen which do?), but if you're writing an application it makes sense to use the code that's already present.

How the Intuition system can be used depends largely on the programming language you are using. At the most basic level, using Assembler or C will require you to set up data structures and call the operating system routines or 'libraries'. This isn't a particularly easy thing to learn about (one mistake and you Guru the computer), but once you have written one application you can usually re-use your code with only minor alterations.

A more user-friendly development system, Blitz Basic 2 for example includes BASIC commands for controlling the Mouse and Requests. This simplifies the construction of normal application programs greatly. The user of your program normally won't be able to tell if your program was written from scratch in assembler, or using Blitz as the Intuition means all look the same.

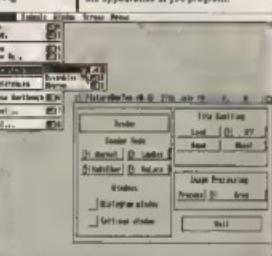

WHICH LANGUAGE SHOULD I USE?

There are many different programming environments available and picking the right one can be a difficult business. If you want to jump right in at the deep end by equipping yourself with G, a good compiler and all the necessary documentation, it could cost you over £350 – but there are plenty of cheaper alternatives. Perhaps the easiest system to start with is with Blitz Basic. The integrated editor and compiler makes writing programs quite straightforward, and

TOOLS

No matter what you might think of them when you used to speak that bug, yes are not ones. Other programmers have been before you, and the Amiga tools have left some tools to help you. Take GadTools for example. Here is a program that will ease you work if you use standard Intuition menu and gadgets in your programs.

Using GadTools you can actually draw your program a user interface on-screen, and then click a button to generate the source code. You will still need to know what to do with the code, but believe me using a program has this can not only save you time but improve the appearance of your program.

As a program which helps you create programs, GadTools is an excellent tool. Draw your user interface on-screen and let the program generate all your source code available.

Blitz is certainly powerful enough to create a full serious applications and stunning arcade games, check out Skirmish if you don't believe me.

If you have your heart set on learning G, the DICE compiler is an excellent place to start. Unfortunately, the PD version won't come with the Commodore Include libraries – the routines which you need to access the operating system. You can either get them directly from Commodore for about £25, or else pick up the March/April Fresh Fish CD-ROM (reviewed on page 134) which happens to contain a drawer with them all inside.

Remember to check out the PD library for more obscure languages. E is one to watch for, promising the power of C in an easier to use way.

Your choice of programming language is determined by several factors. Do your programs need to run extremely quickly? What previous programming experience do you have? Will graphics and sound be important to your programs? How much can you spend on the programming environment?

In the chart to the left, the most common Amiga development languages are rated. Please remember that although C has a low score for, say, graphics support, getting hold of the necessary C source isn't very difficult – if you know where to look.

COMPARISON CHART

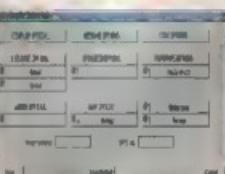

| | Amiga | Amiga | Amiga | Intuition | SAC | SAC | C and G |
|---------------------|-------|---------|-------|-----------|-------|---------|---------|
| Amiga | Amiga | Amiga | Amiga | Intuition | Basic | Basic | C |
| Basic | 1 | 4 | 4 | 4 | 1 | 4 | 1 |
| Executive Speed | 5 | 1 | 4 | 5 | 5 | 6 | 2 |
| C | 5 | 3 | 5 | 4 | 5 | 4 | 3 |
| Graphical/Intuition | C | 1 | 1 | C | C | C | 7 |
| Graphical/Speed | 7 | 5 | 5 | 5 | 7 | 2 | 5 |
| Intuition | 2 | 4 | 4 | 5 | 5 | 4 | 3 |
| Overall | Amiga | Hilsoft | CBM | Euro | Marin | Hilsoft | Emerson |

There are C compilers in the Public Domain (DICE, NORTH C) but the best is SAC from InSoft. Likewise there are PD Assemblers available. Not DevPac is the best. Hilsoft, CBM, Euro and Marin's are PD Assemblers available. Not DevPac is the best.

HiSoft tel: 0825 71 81 81 • Emerson Software tel: 0203 859444 • Marin tel: 081 543 3500 • Emerald Creative Technology tel: 081 715 8066
Key: 1=good, 2=excellent

SAS/C v6.51

There are several C compilers in the Public Domain (and Shareware) Libraries, but none can compare to SAS/C. The update from v5 to v6 was much a major step forward in terms of compiled code speed and compactness than it's time it seemed no further advances could be made. SAS/C has overruled this assumption, by adding C++ compatibility and doing it in a very clever way. C++ is an "enhanced" version of C, offering much more in the way of data structures and object orientation. With C++, data can be packaged into units which include their own special functions. The result is an excellent development system for large and complex systems. Normally, C++ programs are processed into standard C files which are then compiled in the normal way - a rather time consuming business. SAS/C has managed to include the C++ parts of these compilers as standard, which means that there's no mucking around! Even when debugging using the excellent

One of the new VBL features is support for the standard Workbench menu. A small, but nice, plus.

CodeProbe system, C++ code can be examined in every detail.

For time critical applications, the special profiler will examine your programs and break down the amount of time each function is used.

Entering code is made easy with the excellent editor which gives many dedicated text editors a good run for their money. With multiple files, split screens and integration into the C compiler, you won't need to spend any more cash on a good entry system. The on-line help comes in handy when you can't face the thousand plus pages of documentation which come in the box. As long as there are programs of this quality available, no one can say the Amiga is in trouble.

This is truly professional level software. The hand when you can't face the thousand plus pages of documentation which come in the box. As long as there are programs of this quality available, no one can say the Amiga is in trouble.

FEATURES IN SAS/C V6.51

- Includes a C++ implementation, compatible with the AT&T C/C++ C++ files can be compiled by any other C/C++ compiler.
- Special code is presented to take advantage of the #P040 and #P042 chips present.
- Improved prebuild optimiser.
- More efficient code generally.
- The CodeProbe debugger has been improved.
- The built-in Assembler supports chip-memory only code.
- The system default font is recognised and used.
- Improved profiling to trap addresses in your programs.
- Numerous programs can deal with "hostiles" as standard arguments.

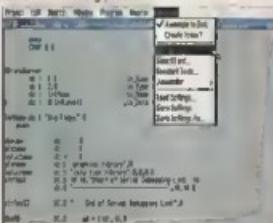

DevPac v3.04

Compared to earlier versions, this DevPac has a much improved editor which makes the rather stressful process of Assembly language programming much more enjoyable.

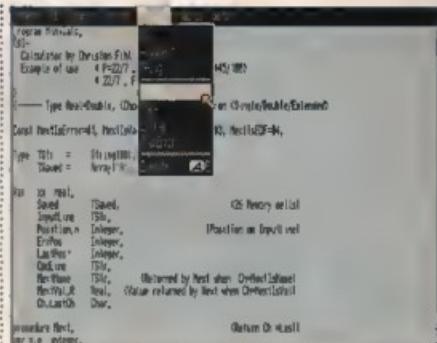

In fact, after using several Public Domain assemblers, DevPac is a complete joy to use. It features the same excellent editor as HighSpeed Pascal, and once again all the options are immediately available from pull-down menus.

The speed of the assembly process is blinding (especially editing using a C compiler) and the many processor and optimisation options mean that the code can be tailored to your exact specifications. If you need ultimate control, there is no other way. The integrated environment makes DevPac

a lot easier and more useful than any assemblers included with other languages. When programming the Amiga, macro code produced by various systems (C, Assembler, Pascal) is actually quite easy and having a separate package for each certainly improves productivity. In an ideal world you would have both SAS/C for general coding, and DevPac to help with those extra stubborn programming problems.

The DevPac Assembler comes with its own test editor which will save you a lot of time and money.

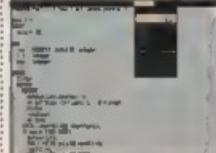

HiSoft Pascal is compiled directly to machine code. In the same way as a C compiler, Pascal programs won't have a boot, which makes it very useful for commercial software development and for teaching.

HighSpeed Pascal v1.10

Loved by academics, it's only until very recently that Pascal has lost its position as "top language" to C. Designed to teach structured programming techniques, Pascal is not only a perfect system to teach yourself programming, but it is also an extremely powerful language in its own right.

Rather than stop with a simple text only implementation, HiSoft's HighSpeed Pascal comes with all the necessary libraries, or "units" as they are known, to write proper intuition based programs. It's even possible to hit the hardware if this is your cup of tea.

The typical HiSoft environment is very well designed, with an excellent editor allowing full control over all the features. At first glance, Pascal programs look a little like C, but on closer inspection they are actually rather easier to read and therefore write.

The HiSoft editor is very good, and all compiler options can be set without leaving the

compilation options. An in-line assembler allows for more advanced use, and the ubiquitous MonAm debugging tool can help keep track of what exactly is going on.

HighSpeed Pascal is also largely compatible with the extremely popular IBM PC-based Turbo Pascal system. Obviously there are differences to take advantage of the Amiga's more advanced hardware, but converting existing programs won't be a nightmare task. A version of the "graph" unit is included which will make converting handling graphics a lot easier.

It all adds up to a perfect introduction to power programming, or a gentle way to get to know languages such as C and C++.

THANKS!

Thanks to HiSoft for providing many of the language implementations mentioned in this article. You can contact them on 0525 210 181.

BASIC instinct

...have you got it?

HiSoft BASIC 2

at last!

HiSoft BASIC 2 shows off its AGA support

The Compiler

HiSoft BASIC 2 is a compiler that feels like an interpreter when you use it from within the integrated environment. It takes source code either directly or via the *include* statement and produces fast, efficient 68000 code; it is also possible to pre-tokenise your source code to obtain maximum speed of compilation. The syntax is highly compatible with other implementations including Microsoft QuickBASIC™ (PC), AmigaBASIC etc., allowing modern, structured programming with a high degree of portability between different machines. The graphics commands built into HiSoft BASIC let you take advantage of the AGA chip set.

You can link with assembly language and SAS/Lattice C programs and compile to memory for testing or compile to disk to produce your final, stand-alone masterpiece.

The Debugger

There are times when your program does not behave in the way that you planned. On these occasions, you can use TRON/TROFF statements to trace execution by line number, or you can invoke the HiSoft BASIC debugger.

This is a medium-code-level debugger, which displays the source code and object code of your program at the same time. You have access to all your BASIC sub-program and function names and you can step through the BASIC source code by line, setting breakpoints as appropriate.

The Libraries

HiSoft BASIC 2 comes with libraries that let you access the features of all versions of the Amiga operating system from Workbench 1.3 up to Workbench 3.1. The standard Amiga names are used, as described in the ROM Kernel manuals, making it easy to translate examples from C. There are examples of using and displaying IFF files, Datasatypes, Gadtools gadgets & menus, Tasks, Sound etc.

The Package

HiSoft BASIC 2 is supplied with a comprehensive, 640-page manual which, in addition to user and reference sections, also contains an extensive tutorial on using the package.

The system works on all Amiga computers with 1Mb or more of memory, at least one floppy drive, keyboard and mouse, in all 80 column screen resolutions. We recommend 2Mb of memory and a hard disk if you intend to work on larger programs or to take full advantage of the new operating system features.

Registered users of HiSoft BASIC version 1 can upgrade by telephoning - please call for information

Even Animation Datasatypes are easy!

Credit/Debit Card Orders

0525 718181

Please between 8am and 7pm Monday to Friday to place an order using your Mastercard, Access, Visa, Switch, Centurion etc. card. We will quote you a firm delivery date on receipt of your order which will be no longer than 28 days and usually within 5 days. For goods in stock we can offer a next day delivery service for £5.

PD SCENE

DO THAT DANCE music demo

Three tracks: I Like to Move It (Reel 2 Real), How Gee (Black Machine) and Bells of New York (Six B) mixed together one after the other and stuck on a disk.

The mix isn't exactly adventurous, but runs smoothly enough from one track onto the next. Most of the samples sound good, although the breakdowns are a bit scratchy. Not a bad effort nonetheless, and well worth it if you're into any of the three tracks.

Available from: Mercury PD, 37 St Augustine Road, Chedwell Street Mary, Grays, Essex, RM16 4NU. Price: £2.99 including P+P.

SWITZERLAND

MELLOW GABBER VOL 2

music demo

Mellow gabber, what a strange concept (considering gabber is the leastest' most insane form of dance music ever devised). Spookily enough though, this demo starts off sounding pretty good, and spookier still, it sounds like mellow gabber. A distorted bass drum kicks away slowly while scary noises and voices wash around in the background. After a while it inevitably speeds up to a more danceable tempo, from where it turns into a slightly more anarchic variation on the 2 Unlimited theme. Cheesy organ riffs loop over some hand beats and basslines, tempting me to rip the turn and remix the better bits. Should find plenty of fans though. Available from: Express PD, Magazine Business Centre, 11 Newark Street, Leicester, LE1 5SS. Price: £1.65 Including P+P.

79%

OH NO! NOT AGAIN

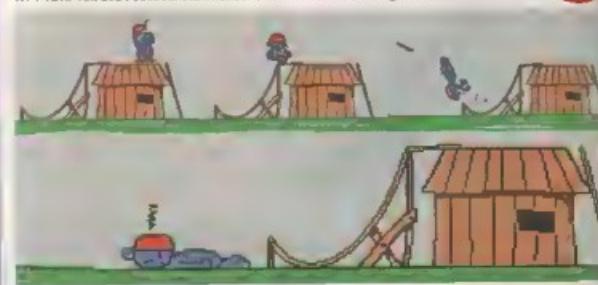

FLYING LESSONS

animation

Meet Bob, a cuddly little blue thing. One day, whilst sunbathing in the park, Bob dreams that he can fly. Waking up to find that he can't, he decides to rectify the situation and sets off down to the garden shed to knock up a rocket pack. The results of this and his later attempts are predictable but fun in a *Road Runner* kind of way. However, it looks original - not just another Eric Schwartz rip-off. It's quite funny too, although the lack of any sound effects is a shame. Animation fans shouldn't miss it though. Available from: 17 BH Software, 1st Floor Offices, 2/6 Market Street, Wakefield, West Yorkshire, WF1 1DH. Tel: 0924 366982. Disk no. 3026. Price: £2.00 Including P+P.

ASSASSINS 156 game compilation

As usual, this Assassins compilation is a mixed bag. There are three games: Darts, Quackers and Karate Champ. Fans of the sport of darts will no-doubt squeeze a bit of entertainment from the first, simple as it is. Quackers is the most impressive of the three. It's a simple platform game with no intros, but it plays well. Then there's the hilarious Karate Champ. This is a hopeless clone of the coin-op that invented the beat 'em up theme. The sound effects are the best bits. "Ooo!" "Ouch!" "Coff!" Who needs commercial games eh?

Available from: Roberta Smith DTP, 190 Fallowfield Way, Hampstead Garden Suburb, London NW11 6JE. Disk no. ASI 156. Price: £1.40 including P+P.

FRIDAY AT EIGHT demo

A shortie this one, but a goodie nonetheless. It gets my vote from the off, thanks to its high-speed 3D zoom tunnel effects. Then it's over to some zooming 3D logos, followed by a load of blurred kaleidoscope effects, building up in speed and intensity to a bit of a sexy crescendo. After all that excitement, it cuts back up and mallows out with another tunnel effect this time a more chilled version, followed by the credits. It's over almost before it's begun, but it's good while it lasts.

Available from: Visage Computer, 16 Station Road, Ilkeston, Derbyshire DE7 5LD.
Tel: 0602 44501. Price: £2.00 including P+P.

REN AND STIMPY slideshow

For those who have never seen it, Ren and Stimpy is just about the maddest, most stupid cartoon series ever, featuring the childish exploits of a disqualling-looking Chihuahua dog, and his brain-dead mate that I think is supposed to be a cat – not that you'd guess to look at him. This is a slightly disappointing slideshow taken from the Haunted House episode. All the pictures are displayed as quarter-screen HAM images, and although the digitising is okay, there's not much colour in them. Full screen 64 colour pics might have been a better option. Still there are enough frames for you to be able to watch the slideshow almost as a cartoon in itself, following the story through from start to finish.

Available from: David Parkes, Freestyle PD, 108 Woodside Way, Short Heath, Willenhall, West Midlands, WV12 5NH. Tel: 0922 404023. Price: £1.85 including P+P.

DISKMAGS

UPSTREAM ISSUE 8

Title is a mag for anyone who is seriously into the demo scene – not just the demoscene themselves, get all the gossip and alluring that goes on between the various coding teams. It's a bit like Corporation Street for hackers really – Whistleblow does renamed himself Fletcher, Stranger has been thrown out of OSC, and Teasmurk Silence receives a phone bill for £1422! Existing isn't it?

Apart from that kind of stuff, there are opinions from around the scene (make James hard disk installable), and other general access-related news and features. Upstream is totally dedicated to text articles, as you won't find any imaging or graphics on the disk. Although there is a base to keep you entertained.

Recommended for the scene-junkie, don't worry the casual demo fan.

Available from: Cynopsis PO, Office 01, New Enterprise Centre, Little Heath Industrial Estate, Old Church Road, Coventry CV9 7NB. Tel: 0203 681887. Disk no: 016253. Price: £2.00 including P+P.

AM/FM ISSUE 18

Aimed at Amiga musicians, AM/FM is one of the more individual disk mags around. Instead of crowning the disk full of as many articles as possible, AM/FM's editors concentrate on profiling more interesting and useful articles, leaving room for some handy utilities on the disk.

Issue 18 includes reviews of the Toccata 16-bit sampler, Aural Illusions, CGD and random demos. There are also features on playing your first synth, 16-bit sampling on the cheap, letters and news. In general the articles are very well written. All of the writers on the mailing team know what they're talking about and give good advice in the reviews and the occasional tutorial features.

On the software side, you get a dump version of the Ayal Music sample editor, General MIDI Patch 1.1 editor, and APackEditor (a custom themed option). Two demos are included, and there's even a batch of MIDI song files too. With all this software is addition to the magazine, it makes a very worthwhile buy for any amateur Amiga musician.

Available from: Cynopsis PO, Office 01, New Enterprise Centre, Little Heath Industrial Estate, Old Church Road, Coventry CV9 7NB. Tel: 0203 681887. Disk no: 016251. Price: £2.20 including P+P.

PD UTILITIES

No mon, no fun. Don't worry because Tony Horgan is here with this month's latest batch of PD releases.

FRESH FISH

CD compilation

Fred Fish is the undisputed King of Amiga Public Domain software. He
claims to have been around since the very dawn of the Amiga, collecting the
best (and sometimes weird) of the Internetware available and collating them
to produce his famous "left-click".

Recently, Fred made the decision to change his software business from floppy disk-to-selling CD-ROMs, but in the process he has done a lot more than merely copying the disks across. Instead, his CDs offer probably the best way ever to get the beginner in Amiga programming started.

The CD which we were sent came from PD-Soft and is dated March 1994. Fred hopes to produce a new disk every one to two months, each one being a mixture of old and new material. In theory you should be able to buy another disk and still obtain all the programs and files.

other software and the bottom line is that the CD-ROM contains 639Mb of software, of which approximately 59Mb is totally new (instead of 80-85 Mb) and programs from the Amherst library. The rest of the disk contains some amazing finds, including 294Mb of useful utility programs such as the GNU C++ compiler and a complete X-Windows/TeX/LaTeX-based DTP system.

Pasted – a full TEC (Text Editor and Compiler) system. Programmers will love this disk. Not only is there a full complement of utilities, documentation and programming tools, but the outstanding Commodore Native Developer Kit is also included. If you don't know C programming or the Amiga you'll know how sticky it can get without the right information; well, here it is... all on one disk. In the other drawers you'll find plenty of std files (all hardware and software reviews) and a comprehensive Amiga FAQ (Frequently Asked Questions). There are over 20 game programs, but this is a collection for the more dedicated Amiga user.

Fred has really paid great attention to the City files we stored on the day. Not only are the useful utilities readily to our, but many files are already awaiting the owners of Bulletin Board Systems to provide on-line.

Obviously, you'll need a CD-ROM drive to use the disk, but that needn't be a major problem. If you don't have a 3½" box Amiga and a CD-ROM drive, the Commodore A570 drive is still available for A500Plus owners, and you have an external floppy drive) any spare CD-TVs can easily be borrowed back into service. Even DOS systems can be used with

new television adaptions (see elsewhere for review).
Available from: PD Soft, 1 Bryant Avenue, Southend-on-Sea, Essex, SS1 2YD, Tel: 0702 465003, Price: £19.95 plus £1 P+P. Or available from: Fred Fish, Amiga Library Services, 610 N. Alma School Road, Suite 14, Chandler, AZ 85224-3887, USA or fax 9101 (602) 917-0042, Price: \$19.95 plus \$5 for small costs.

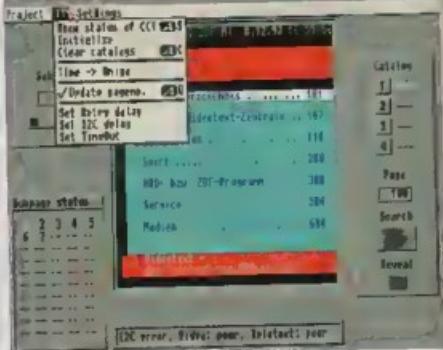

Nexting in a dinner of the Fresh Fish CD-ROM you'll find the latest pictures from Hubble's journey. There is no such detail on this disk it will take weeks of looking through it all.

AM/FM SAMPLES 18

How appropriate the 18th sample disk released by AM/FM deskung people contains exactly 18 samples. The sounds themselves are all big "pads" (big synth atmospheric sounds) sampled from an exorbitantly expensive synthesizer! Some of these ambient, moody sounds are looped, some are single notes, and others are included in a number of chord variations, ranging from 30K to 65K in size. There's a bit of top-end noise on quite a few of these samples, but this can be remedied with some filtering. Other than that, the sound quality is well up to scratch.

Available from: Cynotic PD, Office D1, New Enterprise Centre, Little Heath Industrial Estate, Old Church Road, Coventry CV6 7NB.
Tel: 0202 801587. Disk no: S0220. Price: £2.00 including P+P.

TELETEXT 1.20

teletext receiver

This is half of a software and hardware project that allows your Amiga to receive teletext. You need to use it in conjunction with a TV (or VCR), but the TV doesn't have to be teletext compatible. Once you've got your pages, you can save them out as ANSI ASCII, IFF or the program's TT format. Instructions for building the hardware are on the disk. However you'll definitely need some electronics experience if you want to build the hardware. I'll leave you on this one - the OLY chip was beyond me, so I can't say how well the software works.

the system works.

Accordingly, I haven't scored the program, but if you like to mess about with a soldering iron and fancy a teletext compatible Amiga, it should be worth looking at. Available from: Cynoistic PD, Office 01, New Enterprise Centre, Little Heath Industrial Estate, Old Church Road, Coventry CV6 7NB, Tel: 0203 581587, Disk no. U0293. Price: £2.00

CUTY SPORT

PRESENTS

BRENTFORD v. AC MILAN

MULTIMEDIA BACKDROPS

video backgrounds

If you watch TV news or sports programs you'll know that you can't escape the steady backdrops that reside behind all the league tables, pie charts and other screens of text. This four-disk set is full of those unobtrusive backdrops, all in full colour using 128 colours. If you have an AGA Amiga the program leaves you another 128 colours for any graphics or text you might lay over the top. They're all textures of some kind, and come in various colour schemes. Anyone producing post titles for TV or video should get hold of them pronto. By the way they're not actually PD (Swerve Video retain the copyright). Available from: Swerve Video, 99 Park Lane, Wednesbury, West Midlands, WS10 0PT, Tel: 021 502 4681. Price: £4.75 including P+P (overseas orders add £1.00).

ESCAPE THE RATRACE COME TO THE MOON!

AUDIO MAGIC VI

sound utilities

Best known for their game compilations, the Assassins are branching out into other areas these days. Volume 6 of their Audio Magic series brings you seven useful sound and music utilities.

Play It 2 is a simple tracker module player. *Sound Effect 2.1* is a sample editor that can work with both 8 and 16-bit samples. *M Play* is another module player that's controlled from a mock hi fi system. *Quadrat Composer* is a new tracker (reviewed in last month's PD Utilities). *Sound Machine* converts samples between IFF, RAW and the PC formats VOC and WAV. *D Sound 1.3* plays samples from a hard drive, and *FM Synth 1.1* is a decent sample synthesiser along the lines of E-Z FM, which was reviewed in the March 94 issue of CU AMIGA. Yes indeed, a handy disk and no mistake, missus.

Available from: Robert Smith DTP, 190 Felldon Wey, Hampshire Garden Suburb, London NW11 6JE. Disk no. MUST09. Price: £1.40 including P+P.

ARTWORKS CLIP ART

Original images for the computer. NOT public domain

Each disk contains between 115 and 270 original, high resolution, high quality images for use with Amiga art, desktop publishing and video programs. Details Page: Photon Page

» COURSE FORM
horse ratings

If you like a flutta on the horses, but find working out the form a bit tedious, this could be just what you need. Course Form acts on the information published in the racing section of most national newspapers. You enter the figures into the program, and it comes back with a rating that tells you how likely the horse is to win. It's as simple as that.

Available from: Roberta Smith DTP, 190 Falloden Way, Hampstead Garden Suburb, London NW11 6JE. Disk no. MUS709. Price: £1.49 including P+P.

80%

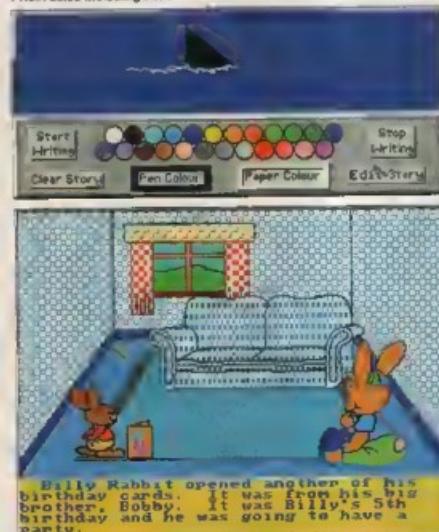

PAINT ME A STORY
story maker

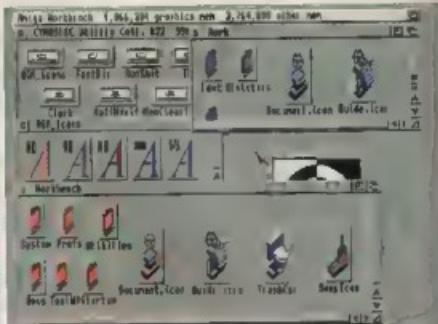

Fancy making your own illustrated children's stories? *Paint Me A Story* is designed exactly for that! There are two parts to the program. The first is the drawing engine which has a few very basic and quite awkward drawing tools (brushes, line, fill etc.) for you to create the illustrations. The other part is where you enter the text for the story. This text and pictures are then combined, and you go onto the next page. With a some patience, you should be able to put together some reasonable picture books, but be prepared for a bit of a struggle; yes, it's not the most beautiful program in the world.

Available from: Essex Computer Systems, 116 Middle Crockerford, Basildon, Essex, SS16 4JA. Tel: 0268 553963. Price: £5.00 Incl P+P.

75

Billy Rabbit opened another of his birthday cards. It was from his big brother, Bobby. It was Billy's 5th birthday and he was going to have a party.

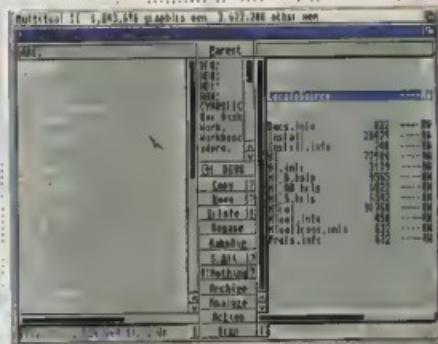

CYNOSTIC UTILITIES 22

They're breeding like rabbits! It must be the time of year of something, I don't know but you just can't move for utility compilations in the PD cupboard this month. Number 22 in the Cynosure series includes some multi-column AGA icons for your own use, *Halt*, *Hot* (turn 1Mb of your 2000's Chip RAM to Fast RAM), *Mem Clear* 7 (tides up your unused RAM), a clock, *Fast Do* (speed up directory listings), *TMC* and *Copy Mem* (speeds up RM access), and *Run SH1* (a replacement for the CLI command *RUN* which disables AGA for backwards compatibility). You've seen the menu, is Sir ready to order yet? Available from: Cynosure PD, Office 01, New Enterprise Centre, Little Heath Industrial Estate, Old Church Road, Coventry, CV6 7NB. Tel: 0203 581682, Disk no. UD583, Price: £2.00 Including P+P.

**Available from: Cynosic PD, Office D1, New Enterprise Centre, L
Heath Industrial Estate, Old Church Road, Coventry, CV8 7NB.
Tel: 0203 881662. Disk no. 100593. Price: £2.00 including P+P.**

78

CYNOSTIC UTILITIES 25

utility compilation

The most useful program on this disk is *Mute Tool 2.0*. This is a file-handling utility along the lines of *SID* and *Directory Opus*. Moving files around using the Shell or CLI can be a real pain, but *Mute Tool* makes these operations much simpler. Two directory windows (one source and one destination) are used in conjunction with a few buttons, and everything is controlled by the mouse, so you don't have to remember and type in long confusing path names and so on.

Also on the disk are a couple of other programs. 2Print is a utility for the HP LaserJet printer. According to the documents "its only goal in life is to print either 166 characters by 68 lines per page, or 80 characters by 66 lines per page". The other program is Fast Disk 1.5, a disk optimiser that speeds up

directory listings and loading of files
Available from: Cynopsis PD, Office 01, New Enterprise Centre, Little Heath Industrial Estate, Old Church Road, Coventry, CV8 7NB.
Tel: 0203 681697. Disk no. U0278. Price: £2.99 Including P+P.

ART GALLERY

Hello luvvies, welcome to the gallery - your chance to shine or get slated as the case may be.

GARFIELD

by Philip Nelson, Cavan, Northern Ireland.

① Garfield was drawn using the pencil tool. At first, the basic ground colour was created and then the eyes and cheeks were drawn in, the eyes being round and bulbous.

② Once the body was drawn, shading was undertaken using the shading tools and the brush tool around the eyes and drawing the handle to add.

③ Next, he drew the legs and the feet and horizontally slipped the left foot.

④ Most of the colours were done by using the fill tool and bucket tool. The whiskers were added, followed by the paws and hands.

Finally, using the island command, some shading was added.

JEAN MICHEL JARRE

This picture was created by David S. Hartley, Dagenham, Essex, UK and produced in Deluxe Paint 3.0 for Amiga 1000 with a 1024x768 resolution.

HUBBLE

by Karin Water, Surbiton, Surrey.

C&D

by Donald B. Heggins, Horley, Surrey.

CATASTROPHE CORNER

Hmm... a rather interesting piece of work - it portrays the angst of modern man and his everyday struggle to find health, wealth and love. Or maybe not - perhaps this was driven by a egoistical maniac after consuming too many fizzy drinks and chocolate. This would have been acceptable, if done by a five year old, however the culprit is actually 49 and a half. Oh dear.

MEDUSA

by Engela Harris, Antwerp, Belgium.

① The eye is drawn freehand with Xomy from the magnify option.

② After finishing both the eye and the mouth, the eye was turned hexagonally on the other side.

③ A few small details later and it's the finished product.

④ The mouth is added using freehand

⑤ A few details were added to get rid of the symmetrical look. Next, a couple of finishing touches to the hair and the face.

⑥ Next, the outline of the face and the chin were outlined and the hair style was then completed.

THE BIG STATION AT KHERNE

by James Wilmot
Christchurch, New Zealand

① The basic form is designed using Brush Attenuate AD with a soft brush. The lines are then saved into Drawing IC. As each drawing, a few stars are added using different brush in crystal mode. The top left star has a horizontal and the vertical circle to the bottom-left to move in the beginning of a planet.

② Texture was added to the planet using a combination of simple, smooth and blurred for a rocky surface texture. The background effect of the station was increased by stretching lines with stroke turned on and painting small squares for the windows and lights. Finally when the texture mapping is complete, details like the red and white lights are added using transparency mode.

FACE

by Mark Hennessy, Dublin, Ireland.

① The outline is drawn in low-res and then the file format is changed to hi-res without stretching the image.

② Next, the outline of the face and the chin were outlined and the hair style was then completed.

③ Shading is applied to give high effect. Then the neck and body were also shaded in and finally a border was added all around the picture.

CU AMIGA SPECIAL

Welcome to our new look readers' offer. This month sees the launch of our new upgrades for the Amiga A1200.

Unlike some A1200 upgrades, ours are fully PCMCIA compatible. Designed and built in the UK exclusively for CU Amiga - never has it been so affordable to upgrade an A1200 with more memory on a board also capable of adding a 68882 floating point maths co-processor at speeds of up to 50MHz.

How can we be so cheap? Well, thanks to the huge success of our campaign to upgrade all Amigas to a minimum of 1Mb, we have exceptional buying power. Also, because so many of our readers buy upgrades we can use the very latest manufacturing technology to produce our upgrades - and hence give you exceptional value.

So why upgrade your memory? Probably because a memory upgrade is the most versatile enhancement you can make to your Amiga. Apart from the fact that you need it to run the more powerful Amiga software, there are many extra benefits too. You can use some of it as a RAM disk, just like a super-fast extra floppy drive. This means you can avoid the cost of a second floppy drive or hard disc. Some software that claims to need a hard disk will run on your Amiga from a RAM disk. A print spooler can save you time waiting for your printer to finish printing before you get on with your work, using your new RAM instead of upgrading your printer or buying an expensive buffer.

For reasons best known to themselves, Commodore forgot a realtime clock for the A1200. Well, we've put it back with our new UK made A1200 clock for just £12.99. Getting more from your Amiga means at least 1Mb, getting the best means adding as much RAM as you can is the essential Amiga upgrade!

MOUSE

ONLY

£9.99

A superb replacement Amiga mouse.

The CU Amiga mouse is a major enhancement because it uses micro switches for the buttons. Our mouse also has a much higher resolution - 800 dots per inch which means you need much less desk space and you get a much finer control

SCANNER TRAY

Do you own a hand scanner?

**£54.99**

Are you fed up with poor quality scanning?

Our brand new Scanner Tray will improve your results no end.

Simply place over the image and clip the scanner into it and it will act as a guide eliminating hand wobbling. This amazing invention is not available anywhere else. Plus, it will help eradicate that wasted time correcting mistakes in scanned text with our OCR software. It's a pain scanning pages of text only to find that they're littered with spelling mistakes. This software package will clean down on those errors before this even happens.

12 GOOD REASONS TO BUY FROM CU AMIGA

All the products offered by CU AMIGA have been carefully selected as being the best in their class. But top quality does not mean top price. Thanks to our huge buying power, we can deliver to our readers the best products at the best prices.

- All memory boards are populated with memory
- All memory boards are individually tested
- Support from a top engineer is just a phone call away
- Prices include VAT, Postage and Packing, the

- price you see is the price you pay.
- No minimum order and no credit card surcharges.
- Memory upgrades carry an exceptional five year warranty.
- 28 day no-quibble money back guarantee.
- We are here until 8pm every day during the week.
- 24 hour order hotline.
- Because we only sell a few items, your order will normally be supplied straight from our stock.
- Your credit or debit card will not be processed if the item you order is not in stock.
- Experienced sales staff are on hand for when you order or if you need advice before placing an order.

AMIGA Workshop

ISSUE 18 JUNE

Oh no, you've waited all month for CU AMIGA and no sooner does it come then it's gone again! Just another couple of pages and you'll be at the end of another issue! But worry not dear reader, you've still got Workshop to get through and what a packed little section it is too!

Over the next few pages we cover Comms, programming, questions and answers, your letters and even throw in the opinion of one of the oldest, sorry, wisest journalists

In the business. So don't let me hold you up, delve in there and find the answers to your most pressing problems. And remember, even though you're nearly at the end of this issue, there'll be another one along shortly!

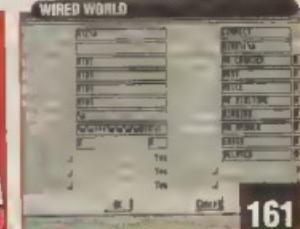

Not only do we give you ultimate programme on our cover disks, but we also show you how to use them. Is there no end to our generosity? Apparently not. So sit back and listen to your headphones as DJ Morgan and the UnDead Kennedy guide you through the sample editor, synth sound editor and the unique eight channel mode - gosh!

Well looky here, one of those strange marketing type things, yes, a reader survey. Yeh, I know at first glance it appears barmy, but fill it in and discover a whole new world. Okay okay, I jest, but if you fill it in and send it back pronto you could win one of fifty joysticks.

Are you fed up taking hours to do something when you know that with a little more technology it would only take minutes? Do you want to reduce the amount time you spend doing things? If so, take the plunge and beg some hints from man John Kennedy as he unveils the secrets of AmigaDOS - can it get more exciting we ask?

In response to your requests CU AMIGA brings you an all new, improved and brighter Comma page. This month we've doubled our efforts for Comma readers. Our very own Matt Tacchi John Kennedy and others put some spin on PadNet, while Graham Mason takes ACComm 3 for a spin

Regulars

166 QUESTIONS AND ANSWERS
Get a problem? Then out two wonkologists John and Andy are here to answer your techie problems in a beautifully prosaic way. If you can't understand a byte from a bit then you need John and Andy!

174 BACKCHAT
Have you seen this month's interview - what a corker eh? Yes, I thought Carry On Kids were off the boil until I'd chatted to Alan's doggo, so blimey here!

178 POINTS OF VIEW
This month we let Steve Keen get a word in that he needs a chance. Steve looks at the new cartridges supposedly coming out and contemplates what we can expect from the CD32 in future

Bing, bing, tsu tsu tsu tsu bop, fuzz. Yes, more strange and wonderful sounds can once again be heard as Tony 'I'll have it for you next week' Lisa, honest. Morgan shows us what real music is all about. This month Tony looks at samplers that can be used in conjunction with OctaMED

In space no one can hear you scream. Unless of course you program in Blitz Basic in which case you can do what you want with the alien, or even aliens (how about aliens?). This month, Daniel O'Connor explains how to control more than two aliens on screen at once

OCTAMED 4 TUTORIAL

PART

1

Last month we gave away the amazing OctaMED 4. This month we continue the step-by-step comprehensive tutorial to this massively powerful music program. CU

AMIGA's resident sound experts Tony Horgan and John Kennedy are on hand to guide you through the sample editor, the synth sound editor and the unique eight channel mode.

THE SAMPLE EDITOR

One of the best things about OctaMED is the sampler and sample edit section. If you have a sampler that connects to the parallel port of your Amiga, you can use this with OctaMED to grab any sound when it suits you.

As the sampler section is built into OctaMED, there's no need to quit out and load up a separate piece of sampling software. To enter the sampler section all you have to do is click on the SMPED button which is near the top right corner of the screen.

SAMPLE RATES

Before you start sampling, you need to know about sample rates. When a sound is recorded, the computer takes thousands of snapshots of the incoming sound wave. When the sound is played back, these snapshots are strung together to form one flowing sound wave. The rate at which these snapshots are taken is known as the sample rate. A higher sample rate will give a more accurate representation of the sound. Think of it as a digitised picture – a low sample rate is akin to a low-resolution digitised picture. A high sample rate is like a high resolution picture. If the sample rate is too low, the high frequencies in the sound will become distorted, and these are likely to be a ringing overtones to the whole sound. The advantage of a low sample rate, however, is that it will use less memory.

Instead of using kilohertz to define sample rates, OctaMED uses a measurement called a *sample period*. The *period* value is lower for higher sample rates and higher for low sample rates. When OctaMED first loads you'll see a default period setting of 428. That's no good unless you desperately want really sketchy samples, so you'll need to change it. When you change it it depends on what you're sampling.

808 SAMPLING A SOUND

You'll need to be connected to a sampler cartridge to be able to record your own samples. Most vehicles are compatible. Press F2 to change the selected octaves to 2 and 3. Now find the Pitch and Destination boxes on the far right of the sample editor window. Move the mouse pointer so that it's over the upper of the two boxes that currently read C-2 (see above).

Hold down the left mouse button, and press Q on the keyboard. This should change the value 428 in the adjacent box to 214. If nothing happens, press F2 to make sure that you have the

PITCH 214 **C-3**
DEST 428 **C-2**
CHANGE RATE

correct octaves selected, and try again. If you're going to sample something that contains high frequencies, such as a drum loop with cymbals, or a vocal that includes "S" or "T" sounds, change the rate to 170 or less by pressing the E key instead of Q when you click in the Pitch box. Otherwise, you'll find the sample is a bit scratchy.

Click on the INSTR button, then click in the long box that appears at the top of the screen. Type in whatever you want to call the sound that you're about to sample, then press return.

Next, you need to set the size of the sample you're about to record. This is measured in bytes. First now, set the sample size to 60,000 bytes (60K). This will give about five seconds of sampling time at the sample rate you just set (214). To set the size of the sample, click on the box marked BUFSIZE, found on the far left of the sample editor panel. Type in 60000 and press return (bearing in mind that there's already a zero in the box, so you only need to enter 4 zeros). You now have a blank space to sample into.

Now you need to get a good sound level coming into the sampler. Click the MONITOR button from the sampler panel, and the band left in the middle of the screen should turn on an oscilloscope display. This lets you know whether the

BUFSIZE 60000 **PITCH DISPLAY**
INSTR: H **SHOW RANGE**
LEN/END: 0 **ZOOM IN**

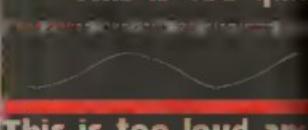

incoming sound is too loud or quiet. Connect your sampler to your sound source, and start the source playing. If you don't see a sound wave moving around in the middle box, check your connections and try turning up the volume of your source. Once you've got a signal coming through, watch the wave and see whether it's fluctuating out at the top and bottom. If so, reduce the volume so that the quietest part of the sound just touches the top and bottom of the box very briefly. If the wave doesn't move far from the central line, then turn the volume up. Look at the examples on the page if all that doesn't make any sense at all.

When the levels are correct, click the MONITOR button to exit monitor mode, and then click the RECORD button. The oscilloscope will come

up again, allowing you to cue up your sound. Just before the bit you want to sample, click the left mouse button a second time to start recording. The screen will go black while it concentrates on recording, but will automatically jump back to the sampler screen once it's filled up its allotted 60K of sample space.

EDITING SAMPLES

You now have a sample – hooray! Press any of the normal keys to play back your sample at different pitches. You can now trim the unwanted parts from the sample.

Use the right mouse button to highlight an area at the start of the sample. If you want to extend the highlighted area (referred to as the range), hold down the shift key when you use the right button.

Use the PLAY RANGE button to hear the selected area. Click on SHOW RANGE to magnify that area to the full width of the screen. Locate the parts you don't want, highlight them, listen to them with the PLAY RANGE button, and then click on CUT when you've highlighted to unwanted parts. Use the ZOOM CUT and SHOW ALL buttons to view more of the sample.

PLAY RANGE

LEN/END: + OctaMED

MOD 2(MODINST) **DISC** **DIR WORKSHOP**
ST-MODULE **FILE** **IV-sample**

SAVING A SAMPLE

To save out your sample to disk, click on the FILES button. Wait for the drive light to go out, and insert a formatted disk in the internal drive. Click on DFD in the devices list on the right of the screen. Click in the FILE box and type in a name

Echoes can be put on the sample with the ECHO button. This uses the three parameters to define the gap between each echo, the decay ratio, and the number of echoes. A random white noise creator is also included, activated by the NOISE button just left of the echo button. The value to the right of the button is the level of noise, which can be changed by clicking in the box and entering a new value. You can use this to mix in some hissy noise over an existing sample, or just add some pure noise in a blank sample. You

NOISE 28

might want to use the BOOST option to emphasize the noise. This is particularly handy for generating your own drum and cymbal sounds.

Freehand is a useful option that lets you edit the sample wave by actually drawing it on-screen with the mouse. As soon as you click the FREEHAND button, the sample window zooms in close on the sound wave. You can now draw in the sample window by holding down the left mouse button. Try this if you need to remove tiny clicks or pops from a sample.

Just to the right of the freehand button you'll find the CHG VOL button. This stands for Change Volume — can you guess what it does? The first parameter is the volume for the start of the sample (as a percentage of the original volume), and the second is the end volume. This means you can create volume fades by using two different values. The default values are both 200%, which would of

sound distorted.

For the sample and press return. Click the SAVE INSTR button to save the sample.

SAMPLER EFFECTS

There are a number of effects you can use from the sample editor to improve the sound quality and spice up your samples. All of the effects buttons work on the highlighted range of the sample, leaving the unselected parts as they were.

Sometimes your sample doesn't sound as bright as the original — this is usually due to a loss of treble in the sample. To counter this, highlight the whole sample (or the section you want to effect), and click the BOOST button. You'll hear the difference when

BOOST 16 1

you play the sample again. The two numbers to the right of the button are the settings for the boost and filter controls. Experiment with these for some weird effects. Filtering the sample can cut out a lot of unwanted hiss, and can be especially useful for sampled basses. Use the FILT button to filter the sound. REV turns the sample around so that it plays in reverse. Cut, copy, paste, delete and clear work as they would in any other package. Anything

you make the sample twice its original volume. Remember that you can only turn the volume up so far before the sample becomes distorted.

So-CBUFF copies the current sample into the copy buffer. CRU-BUFF pastes the contents of the copy buffer into the sample window. DEL-CB deletes the copy buffer (can save a little RAM), and RE-SY copies the sample into the synth editor. This CHANGE RATE button will re-sample your sound, so that it plays back at a different pitch, using the PITCH and DESTINATION values. OCT up and OCT down will transpose the sample data a whole octave up or down, either doubling or halving the size of the sample in the process.

EIGHT CHANNEL MODE

One of OctaMED's most powerful features is its 8 channel mode. Normally the Amiga can play up to 4 samples simultaneously, but thanks to some very clever programming, OctaMED can play eight. It manages this by mixing eight samples together to make four, which it then pumps but through the normal sound channels. This does come at a cost though — you'll have to make do with reduced sound quality and more approximate tempo control.

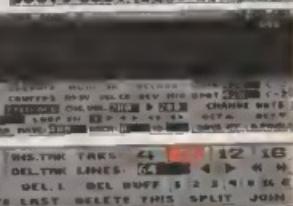

To enter eight channel mode click one of the buttons marked 4-8 on the main PLAY panel. If you only want to use five channels, click the five button. There's no point in getting the program to mix eight channels if you're not using them all — on slower Amigas there's a very noticeable loss of speed, which is minimised by selecting fewer channels.

You'll be asked if you want to have the samples as soon as you enter anything over four channels mode. Press Y for yes. This will halve the volume of the samples currently have loaded, and will automatically do the same to any samples that are loaded in from now on. If you don't have the samples, when the channels are mixed, the combined samples will be too loud, and will sound distorted.

In order to use the full eight channels, you'll need to set the number of tracks in each block to eight. Do this by clicking on BLOCK, then on the eight button. The display changes to show all eight tracks at once, which can be a bit hard to see on a TV, but unfortunately there's no way around this. The speed control is now limited to the secondary tempo.

The tempo slider on the left now has no effect, so you need to use the one on the right. A lower value equates to a faster tempo. You'll notice that

the secondary tempo doesn't allow for as fine tweaking as the primary tempo.

If you Amiga has an accelerated processor (68020 or higher) you can use the HQ button to squeeze some extra sound quality (most notably treble response) from the 8 channel mode.

SYNTH SOUNDS

One of the many features which makes OctaMED is rather special sound tracker is its ability to create its own sounds from scratch. Rather than relying on samples (either your own, or those of someone else) it is possible to generate noises completely synthetically. It's like owning a very expensive synthesiser, without the expense!

STAGE ONE

Load up your copy of OctaMED, and select the INSTR edit screen. Enter a good name, and then select the sound type. Ignore any 'Error object not found' messages when you enter the name. OctaMED can use three types of sound samples: synth sounds and hybrid sounds, which are a combination of the first two. Click the SYNTH button next to the word TYPE on the instrument panel. Now you need to go to the waveform editing screen, so select SYNTH from the buttons on the far right.

STAGE TWO

There are two oscilloscope displays for you to draw your waves into. The one on the right is for experiments, the one on the left is the main

oth volume level.

and may be noisy.

sound distorted.

for the sample and press return. Click the SAVE INSTR button to save the sample.

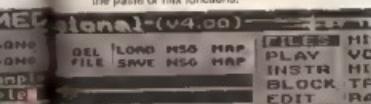

SAMPLER EFFECTS

There are a number of effects you can use from the sample editor to improve the sound quality and spice up your samples. All of the effects buttons work on the highlighted range of the sample, leaving the unselected parts as they were.

Sometimes your sample doesn't sound as bright as the original — this is usually due to a loss of treble in the sample. To counter this, highlight the whole sample (or the section you want to effect), and click the BOOST button. You'll hear the difference when

BOOST 16 1

you play the sample again. The two numbers to the right of the button are the settings for the boost and filter controls. Experiment with these for some weird effects. Filtering the sample can cut out a lot of unwanted hiss, and can be especially useful for sampled basses. Use the FILT button to filter the sound. REV turns the sample around so that it plays in reverse. Cut, copy, paste, delete and clear work as they would in any other package. Anything

waveform. You can swap between them at any time, or copy one waveform back and forward between screens for editing. You can also add and mix the waveforms together.

For the moment, make sure the EDIT arrow is pointing to the left, and click on one of the quick-set waveforms (the sine, square, saw, ramp or random wave). The wave should appear on the scope, and if you press the normal OctaMED keys you should be able to hear it.

STAGE THREE

You can edit the wave by drawing over it (select the PIXEL, LINE or MIX buttons to see what difference they make, if you're brave, you can try designing a waveform from scratch). If you select RANGE ALL, the buttons marked DBL and REV will start to have interesting effects (DBL doubles the pitch of the sound; REV reverses the wave). Remember the UNDO button when you get carried away.

Unfortunately, simply squiggle like this is unlikely to produce top-quality results. In fact, you'll probably end up with a pretty unusable fatty noise. Time to move onto the next stage.

STAGE FOUR

OctaMED comes with its own programming language to help you control how sounds are made. There are two lists of these special OctaMED control instructions over at the bottom right-hand side of the screen. The one to the left controls the volume, the one to the right offers more control over the waveform itself.

The default setting is a volume of '40', which is in hexadecimal. In decimal terms this is '64', the maximum allowable volume. Let's make the volume decay with time.

First press the ESC key to enter edit mode, and use the INS button to create two new lines. After the last so it reads 40, CHD 2 (as seen below). To do this, move the small red square cursor to the far left position, and enter 40. Now move to the next line down, and press D on the keyboard, which will enter the CHD command. If you just hear the note play, check that you are in edit mode. Enter 02 into the next line down.

Press ESC again, and then a few keys to trigger the sound. You should find it decreases in a much more musical fashion.

STAGE FIVE

The waveform control instructions are used in the same way. You can add some vibrato with VBF, and also slide the pitch up and down with CHU and CHD. If you enter a number by itself, OctaMED will

swap between different waveforms to make the noise. Although only one waveform is displayed at a time, it's possible to have up to 127 different patterns. This can lead to some pretty excellent sounds – if sweeping is only one possibility.

If you are worried about the prospect of entering all 128 different waveforms by hand, you'll be delighted to learn that OctaMED can create them all automatically. You can actually 'morph' between two sounds as you need to do a supply a start and an end and let OctaMED do the rest. Use ADD (on the left of the panel) to create a new waveform slot, and then click on the Square wave button. Now go back to the first waveform (which should still have the Sine wave). Using the plus and minus buttons next to the WF indicator, click START and go back to the last waveform and click DEL. OctaMED will morph the waveforms in-between from the Sine to the Square – but you won't be able to hear anything other than the first waveform if you don't alter the settings in the programming table.

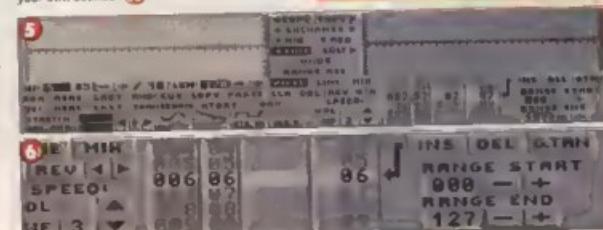

STAGE SIX

You'll see that the default number is 0 in the programming table – which means 'play waveform zero'. If you alter this (remember to hit ESC first if you're not in edit mode) you can play any of the other waves you have created.

However, things start to get really interesting when you add more than one waveform. Use the INS button to add more positions, and then enter 0,1,2,3,4,5,6,7,8 (or whatever your last wave was) and 8,7,6,5,4,3,2,1. When you play this (hit ESC again, first) you'll hear a nicely looping sound.

There are many advantages to creating your own sounds in this way – not only are you virtually guaranteed a bit of originality, but the sounds you create will use up a lot less RAM that simple plaid sounds.

See the panel to the right on volume and waveform instructions for further info on creating your own sounds.

SYNTHSOUND PROGRAMMING

Here is a very handy list of commands for use in the synth sound editor as described in this article.

The symbols ?? = a hex number, for example 00, 02 or 2F.

VOLUME INSTRUCTIONS

?? Set Volume

When a hex number from 0 to 40 is used with no command name, this sets the volume to an absolute level.

CHD ?? Change volume down

Press D. The number which appears beneath the CHD command is the rate at which the volume decreases.

CHU ?? Change volume up

Press U. The number which appears beneath the CHU command is the rate at which the volume increases.

JMP ?? Jump

Press J. A JMP will skip to the supplied line number, thus allowing loops. You must ensure there is at least one other instruction in the loop (to HALT even) or the program will lock up.

HLT Halt

Press H. Halt will pause the control list, but a jump can be used to avoid it.

WAI ?? Wait

Press W. This will delay the instruction list for the following number of time cycles.

WAVEFORM INSTRUCTIONS

The list waveform instructions include JMP and HLT, as well as:

?? Set waveform

A number by itself is the waveform to be played.

CHD ?? Change pitch down

Press D. Decrease the pitch of the rate specified.

RES Reset

Press R. Reset the pitch to initial level.

ARP ?? .. .ARP Start/end envelope definition

The numbers between the ARP and ABE are the offsets from the baseline. Try ARP, 0, 3, 5, ABE.

VBD ?? Vibrato depth

Press V. The depth of vibrato.

VBS ?? Vibrato speed

Press SHIFT V. The rate of vibrato.

OctaMED 4 is like a powerful MAX/MSP patch, it can do all its usual tricks with audio analysis, complex and flexible MIDI sequencing simultaneously – and that's not all... so what program was mentioned? Next month we'll be looking at how to unlock its MIDI power, and investigate some of OctaMED's unique features. Until then, keep on grooving!

What's new?

OctaMED 4 is like a powerful MAX/MSP patch, it can do all its usual tricks with audio analysis, complex and flexible MIDI sequencing simultaneously – and that's not all... so what program was mentioned? Next month we'll be looking at how to unlock its MIDI power, and investigate some of OctaMED's unique features. Until then, keep on grooving!

THE AMIGADOS PROBLEM SOLVER

John Kennedy, the man with the answers, dons his Shell Suit to take another look at making the most of the Amiga's advanced operating system.

Do you want to speed up operations and customise your workbench? Yes, well read on to find out about some handy tricks that can do just that.

The Amiga's Shell is an incredibly clever thing — you can copy files, delete them, edit them! In fact you can do anything you can do from the Workbench and a whole lot more besides. I use the Shell so much that I have its icon permanently 'left out' on the Workbench, but some folk even get their operating system to open one for them every time they boot, by altering the Startup Sequence.

Unfortunately, Commodore decided not to include a manual on using AmigaDOS with the A1200, which means a lot of users know virtually nothing about how to use it. By that, I mean a bit of looking around you should be able to work out a few basic Shell commands. Once you have the shell open, you should at least have a fair idea that DIR will produce a list of the files in the current directory — but that can be the limit.

The table below contains a handy run down of some of the more useful Shell commands for you to keep as a reference.

SIMPLE AMIGADOS COMMANDS

| AmigaDOS Command | Function | Example |
|------------------|--|-------------------------|
| newshell | Open a new Shell window | newshell |
| rdcl | Close the existing window | rdcl |
| run | Start a program in the foreground | run newshell |
| dir | Obtain a list of the files in the current directory, or in the named directory. | dir dir |
| cd | Move to another directory or move back up one sub-directory, or display the name of the current one. | cd / cd |
| ed | Edit an existing file or create a new one. Press ESC and D to exit without saving, and ESC and X to save and quit. | ed start-up sequence |
| delete | Delete a file | delete romplay.lok |
| list | An DIR but with more information and options | ls -l |
| copy | Duplicate a file | copy dir2/plus to dir1/ |

Configuring Workbench is easy; you simply drag the icons of your favourite programs and drop them in the Start window. The menu item will automatically create for you.

Note: references to the CLI mean more or less the same thing as the Shell. Earlier versions of

The easiest way start Workbench is to put a small program in the WB-Startups drawer. Now every time your Amiga boots, the same menu will be present.

Workbench only had a GLI, which lacked basic editing facilities. For example, you couldn't press arrow-up to get the last thing you had typed.

Run is useful if you need to do several things at once. If you open a Shell window and enter run copy dir2/plus to dir1/QUIT2

You can carry on with other commands whilst this copy process is done in the background. This is what the Amiga's 'multitasking' operating system is all about.

Sometimes you can't close a window if a task is still being processed. If this is the case, use the following listing:

run <file> <file> My_program_here

This will redirect any input and output which My_program_here may generate to a non-existent device, and suppress any messages or replies. It is especially handy to use in the Startup-sequence to stop programs opening tedious little windows.

WORKBENCH UTILITY PROGRAMS

One of the Amiga Workbench's better features is the ease at which extra programs can be integrated into it, to make life easier.

TOOLSDEAMON

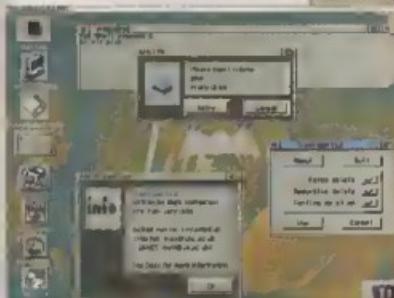

One the many such programs I find almost invaluable is called ToolsDaemon, written by the incredibly busy Nico Francois. ToolsDaemon offers an easy way to add your own menus to the Workbench, and each item is really one of your favourite programs. Instead of having to wade through dozens of drawers and directories trying to find *Deface Paint*, you can create a menu called 'Graphics' and include *DPaint* as an entry. When you select the *DPaint* menu option, the program will automatically load - handily or what?

ToolsDaemon is best used with a hard drive system, although if you give your floppy disks sensible names and stick to them, you might be able to use it with a floppy-only system. It's available from any good Public Domain library, so do yourself a favour and get a copy.

TRASHICON

I rarely if ever, use the Trash icon that comes as part of the Workbench. In fact, when formating disks I always use the NOICONS option to make sure one is created. The main reason I don't use the Trash icon is that it can't be left out on the Workbench - it can only stay within the disk window. To get around this, Mark McPherson has written a program called Trashicon which can be left out. In fact, it's a program which has an icon instead of a window. Whenever something is dropped into it, it gets deleted. It's much closer to the Apple Mac's Trashcan, and as a result is lots easier to use. Look out for it.

Incredibly, the snazzy looking requesters are created by a program called ARG. It patches the system requesters to include little animated pictures and when used with MagicWB it looks really good. 

Trashicon is a program which creates a little bin that can be left out on the workbench. Ask your favourite Public Domain file K, and get *ArgClient v2* as well. Both at the top right of the screen. The ARG requesters always add a touch of class to this Amiga. *ArgClient* is a Workbench patcher, so once you have it in place you should never need to run it again.

WILDCARDS

Wildcards are an incredibly useful way of saving your fingers from wasting out. These can be used wherever a normal filename would occur, but can speed up a lot of operations.

There are two symbols that AmigaDOS uses the '#' hash symbol (known as the pound symbol by americans) and the '?' question mark. If you are used to the PC and MS-DOS then you'll have some re-learning to do, as the '?' star isn't available by default.

When used in a filename, e.g. ? means 'any character' so the list of following filenames are all equivalent:

```
?testfile.dat  
testfile1.dat  
test?2??.dat  
Test??1..dat?  
??9999..dat
```

The 'hash' mark is used to mean 'any number of (or no) characters', so the following filenames are all equal:

```
#file.*.  
#file1.*.  
#file2.*  
#filefile.*
```

Now the combination of the wildcard symbols is what makes them most useful. The following files are all equal. Remember that AmigaDOS is very flexible with filenames, and certainly doesn't limit them to a group of eight characters, a full stop and three more characters:

```
my_picture.iff  
my_picture.?9  
my_?.?9.  
my?.?9
```

Now for some practical examples. Say you had a list of images which you needed to copy from one disk to another. All the pictures had different names, but you had the foresight to include '?' somewhere in their names.

For example, they might be like this: John_BindyTiaCatIFF.IFF or _Sam_Sam

You can copy all these files with one command: copy d0 #?iff? to d1. The wildcards will get anything which has '?' somewhere in it. Note that AmigaDOS is not case specific. If the files are all stored in a directory called 'pictures' you would use a CLI command like this:

```
copy  
d0/pictures/#?iff? to  
d1/pictures
```

If you wanted to re-create the directory, include the name of the new directory, like this:

```
copy d0/pictures/#?iff? to d1/pic-  
res
```

This will create a new directory, and copy only

the files with 'iff' in their names into it. If you don't want to see a list of filenames, but QUIET at the end of the command, like this:

```
copy d0/pictures/#?iff? to  
d1/pictures QUIET
```

With Workbench 2 and up, a new and useful little symbol was added - the '-' or lida. It's obtained by shifting the key beneath the ESC key. The lida means 'not' so you can obtain a listing of all files that don't have 'iff' in their names with a command like this:

```
list (-l)files
```

The brackets are optional, but they are there to let you make it clearer to see what is going on. Things can start to get tricky, especially when you use the '?' symbol which means 'or'. For example, to list all files which have 'iff' or 'gif' in their names, use the following:

```
list (-l)(iff|gif)files
```

If you want to miss out any files ending with 'info' (in other words, the icons), use this:

```
list (-l)(?info)files
```

You can see that although wildcards are powerful, they can quickly get well out of hand. Sometimes you spend more time thinking of the combination of 'if's and '?'s and it's to use than you would have copying each file in turn. That's compelling isn't it!

Deleting old files is an essential chore that you need to do before you fill your entire hard or floppy disk with rubbish. Wildcards can speed things up.

```
delete #*.bak
```

will remove any old files. It's worth testing the command by swapping delete with a list before you accidentally nuke something important. You especially don't want to enter:

```
delete #*
```

Or you might loose everything.

If you want to remove a directory and its contents, use a command like this:

```
delete d0/pictures/ALL
```

Now this will delete the files in the pictures directory, but it won't delete the directory itself. To do that include the ALL keyword, like this:

```
delete d0/pictures/ALL
```

You might get an error message, can't delete such-and-such in use. This could be because an ASSIGN has been made to the file, so check you startup sequence for and references.

NEXT MONTH

John continues on his voyage of AmigaDOS discovery, finishing great young series of misadventures and, crossing the frontier of knowledge in his quest to help you out your Amiga for bigger and better things.

This is Janika.

She's intelligent.

She cares about the environment.

She's got a good job.

She's ambitious.

And she's going to kick your teeth in.

We're feeling pretty hard at the moment because the June issue of *The One* is going to be a veritable bloodbath. Janika will be performing amateur dentistry with her mates in our fantastic four-page review of *ELFMANIA*. We'll be bruising our shins and elbowing each other in the face as we take a look at *JAMES PONO 3* and *SIERRA SOCCER*. And we'll no doubt be doing lots of other crazy things, because we're like that sometimes.

Even our coverdiscs are the toughest in the business. We'll have a massive *ARMOUR-GEODON II* demo, two complete levels from ICE's forthcoming *GULP!* plus 15 levels of platform mayhem with *TDUCH 'N' GO* and a completely brilliant version of that old classic *OIG DUG*. There'll probably be some other stuff as well, but we're not going to give you any more info because it's all top secret and if you found out we'd have to kill you.

Anyway, we're bored with talking to you now. We're off round the Krays' house for a quiet game of bridge.

JUNE ISSUE
ON SALE
MAY 28TH.
BUY IT. OR
WE'LL SEND
THE BOYS
ROUND.

November 1992

Cover: A4000

On Disk: Videowave 3D animation package plus game demos of La Grotte de Valentine and Red Planet.

Inside: Amiga 4000 first test, which Amiga should you buy? Lethal Weapon and Shadowlands and Office 2 reviewed

December 1992 - Sold out!

January 1993 - Sold out!

February 1993 - Sold out!

March 1993 - Sold out!

April 1993 - Sold out!

May 1993 - Sold out!

June 1993 - Sold out!

July 1993

Cover: Full media video

On Disk: Workbench Management System v2.0, plus playable demo of The Patriarch of ET Challenge

Inside: Full Media v2.0 VHS examined.

Syndicate, Inter 2 and Des II reviewed, plus Vida 2 Pro and Synergy guides to ODS packages and joystick.

August 1993

Cover: CD32.

On Disk: Interword, a very nicely written word processor, plus a playable demo of Virgin's Agonyphere.

Inside: Music Up, a rounding of RAM expansions, V-Lad digitizing system, Delos Music Construction Set 2.0, Grateful Geeks Jukebox book.

September 1993 - Sold out!

October 1992

Cover: Star Trek 25th Anniversary

On Disk: Fieldview 2.5, the ultimate image processing and graphics tool, plus playable demos of Wandsphere and Mean Green (1M6 only).

Inside: A meeting of minds - CU chose an Amiga over a debate, Star Trek 25th and Space Hulk reviewed plus Digital Creations.

November 1992

Cover: Frontier

On Disk: The absolutely superb

graphics/DTP package, ExpertDraw (TM only), plus unimaginably brilliant demos of Frontier, Owls and Magic Boy. Inside: Gaming II: There it is as a zippy magazine inclusion - a complete guide to the Amiga, plus lots of hardware and software reviews, including Franklin

December 1993

Cover: Amazing!

On Disk: Angga Animator - the animation program and Speckulator, plus demos of Tarcis 3 and The Settlers, New! Inside: Exclusive R2 page, Oracle Palm guide, Christian heavy gods, Mercureum on GSZ2, Terminator 2 Arcade Game, Alien Breed 2 and The Settlers.

January 1994

Cover: Animations and graphics special.

On Disk: Sensible Software's Shell, On the Computer 3rd, Foxi Grabber, plus a fully playable demo of Mortal Kombat (1M6 only). Inside: On the Web with Internet, the showstopper, Voir 12/94 RT MatePoint roundup, Beware a Steel Sky, Canons Fodder, Zool 2, Merlin 3, Simon the Sorcerer and Skirmish.

February 1994

Cover: Merlin/Mimicula.

On Disk: Softworld File database and Craft, an Amiga programming extension, plus a completely porting demo of D248 (TM6 only). Inside: Full Motion Video evaluated, Visions of Space and Sound and Vision and TV Brain 2 reviewed plus Manchester United and soccer Madonna Bros.

March 1994

Cover: Dot 1 get lost in multimedia!

On Disk: Softworld File database and Craft, an Amiga programming extension, plus a completely porting demo of D248 (TM6 only). Inside: Full Motion Video evaluated, Visions of Space and Sound and Vision and TV Brain 2 reviewed plus Manchester United and soccer Madonna Bros.

April 1994

Cover: Cash In - turning Ideas into money in the Amiga

On Disk: Adagio, Twel Force, Miserer Virtu Klitter, Ripe a Quad VI and Done. Inside: Reviews of Dimension, Imagina 2.5, Dimensions, Rapier, Ozone, Kiper's Quail, Slick Guit, and Stress The Vacuum.

A500 8Mb RAM UNIT

Incorporating the latest "ZIP" DRAM technology, our External Memory Upgrade allows the A500 / A500+ to be upgraded by up to a further 8Mb of auto-configuring FASTRAM.

- RAM version LTD
- RAM version express
- RAM version 4Mb
- RAM version 8Mb
- Very low access times
- Threadsafe for future software
- Optional PSU (plus Amiga power source division)
- Available with 8Mb, 16B or fully populated with 16B
- Compatible with A500 and other SCART Hard Drives (please call to check)
- With 2Mb fitted with 4Mb fitted with 8Mb fitted

£129.99 £179.99 £279.99

PARTITIONED UNITS EXPAND TO AND WITHIN NEEDLES AT ONE STEP PER MB. OPTIONAL POWER SUPPLY C186

READERSHIP SURVEY

In order to give you the very best Amiga coverage we need to find out exactly what you think of both us and the home computer market in general. The information we get from you will be used to improve CU AMIGA (if it needs improving) and to advise Commodore and the software houses of your opinions and preferences. Send your completed surveys to:

**Readership Survey,
CU AMIGA, EMAP
Images, Priory
Court, 30-32
Farringdon Lane,
London EC1R 3AU.
(Senders of the
first 50 surveys will
receive a joystick.)**

ABOUT YOU

1. Are you: Male [] Female []

2. How old are you?

- | | | | | | |
|---------|-----|------------|-----|-------|-----|
| Under 7 | [] | 8 | [] | 9 | [] |
| 10 | [] | 11 | [] | 12 | [] |
| 13 | [] | 14 | [] | 15 | [] |
| 16 | [] | 17-19 | [] | 20-23 | [] |
| 24-29 | [] | 30 or over | | | [] |

3. Are You?

- | | |
|----------------------------------|-----|
| In junior school | [] |
| In secondary school | [] |
| In 6th Form/Bath College | [] |
| In higher education (University) | [] |
| In full time employment | [] |
| In part time employment | [] |
| Unemployed | [] |
| Other | [] |

4. What do you do in your spare time? Please rate how keen you are on each of the following (10 = hyper keen, 1 = couldn't care less).
 Play video games [] Playing sports []
 Watch TV [] Watch satellite []
 Watch videos [] Listen to music []
 Listen to the radio []
 Play arcade game []
 Go to the cinema [] Other []

5. On average how much time do you normally spend playing video games or using your Amiga for other purposes every week?
 Less than 1 hour [] 1-2 hours []
 2-4 hours [] 4-6 hours []
 6-8 hours [] 8-10 hours []
 10-20 hours []
 More than 20 hours []

6. How do you play your games?
 On my own [] With a friend []
 With a group []

7. On average, how much money do you earn/get given each month?
 £0-0 [] £10-£49 []
 £50-£99 [] £100-£499 []
 £500-£2832 [] £833-£1249 []
 £1250-£1066 [] £1567-£2499 []
 Over £2500 []

8. Which of the following do you regularly buy?
 CDs [] Tapes []
 Videos [] Clothes []
 Shoes/Trainers [] Sweets []
 Crisps [] Drinks []
 Takeaway food [] Books []
 Comics [] Other []

9. Do you have a bank account?

Yes [] No []

YOU AND YOUR AMIGA

10. Which of the following describes your technical competence on the Amiga?

- | | |
|--|---------------|
| Expert [] | Competent [] |
| Beginning to get the hang of most things [] | |
| Complete beginner [] | |

11. Which of the following Amiga(e)s do you own?

- | | |
|-----------------------|----------------------|
| CD32 [] | Amiga 500 [] |
| Amiga Plus [] | A600 [] |
| A1000 [] | A1200 [] |
| A1500 [] | A2000 [] |
| A3000 [] | A4000/C4000/3000 [] |
| A4000/040/A4000DT [] | |

12. Do you plan to upgrade your Amiga in the next 6 months, if so to which model?

13. Which version of Workbench are you running? (If you have more than one list the highest)
 1.2 [] 1.3 []
 2.0/2.05 [] 2.1 []
 3 [] 3.1 []

14. How much memory (RAM) does your Amiga have?

- | | |
|------------------|---------|
| 5Mb [] | 1Mb [] |
| | |
| 6Mb [] | 4Mb [] |
| | |
| 8Mb or above [] | |

15. What size hard drive do you own (if any)?

- | | |
|--------------------|----------|
| 20Mb [] | 40Mb [] |
| 60Mb [] | 80Mb [] |
| | |
| 120Mb or above [] | |

16. Which of the following peripherals do you own?

COMPILED BY

COMMS

There's never a dull moment in cyberspace - it's like receiving a sack of mail, a bundle of the latest PD and a magazine or two through your letterbox every morning. John Kennedy looks at what's what.

Early every morning, before the postman comes round, my computer uses its modem to dial a local number. After a few seconds the transfer is finished, and I have a new sack of mail to read through.

The mail ranges from everything from personal messages from people I've never met, to general comments about the Amiga's operating system.

It's all down to Comms, the hobby that's growing in popularity every day. To take part you need a computer, a modem, a standard telephone line and some software - and it's easier to get started than you might think.

sysopl Might be worth a try for novelty value alone
Beachy Head Amico on Tel. 0323 520899

Here are some more of the comparatively few Northern Ireland BBSs: The Village BBS Tel 0232 602972

Starship Enterprise Tel 0232 763014, Heart of Gold Tel 247 274919.

For those in the UK mainland you might like to try AmigaBea 081 895 6308 (nice good all round board), Slice a BBS on 081-309 5258. Some other boards include: The Ahvals 0753 529650,

Other contacts include: The Roxy's 0635 872600,
Amiga Pond 051-547 3245,
Thunderball Amiga 0635 872605
Welltons Mountain 081 891 5730.

REACH OUT AND TOUCH...

What is FidoNet? It's a huge network of amateur bulletin boards spread across the world. There are over 26,000 boards taking part and each board is used by many people. You can log onto a Fido board just like another BBS, but when you go to the messaging areas you'll see a heck of the lot of interesting stuff going back and forward.

Fido boards link up at night, and share messages between one another. This means that as well as having local areas, most boards have national or even international sections.

Anyone with access to a Fido board can take part in these 'Echoes', which are on-going conversations about everything under the sun. The Echoes broadly categorise what the conversations are about (Astronomy, Amiga magazines, games consoles) and inside each Echo are different 'threads' on related topics.

If possible, instead of relying on reading and replying to messages whilst your modem is connected, you should try to get hold of an 'off-line reader' program, such as Q-Blue or Any!RW. These programs allow you to read and answer messages whilst not actually on-line — your messages are all bundled up and sent when you have finished. Q-Blue and Any!RW are freely downloadable from most boards, under the names of Q-BLUE10.LHA and ANY!RW10.ZIP.

Alternatively, you should consider becoming a 'point' on a FidoBoard. Ask your local board's sysop about it, and he'll tell you all the advantages and help to get you started. You must ask your sysop before becoming a Point so they can give you a point number.

Don't worry, becoming a point is free, and in return you get to have your own miniature bulletin board system. The best software for the job is Spot (written by PFMware author Nic François), and you'll also need TrapDoor to do the mailing. Both programs are shareware, and easy to cut hold of.

EIRO UPDATE

AMIGA MAGE
It's all happening in the
AMIGA_MAGS echo on
FidoNet at the moment.

FidoNet at this moment. Every day a dozen new messages appear as the system continues... which

...ing out of the block or that head? What makes a good magazine coverdisk... In fact there is so much we're considering setting up a CU AMIGA specific echo.

If you are part of FidoNet ask your sysop to get the AMIGA_MAGS echo. You'll soon see for yourself what's going down, so feel free to jump in with comments about your favourite magazine (CU AMIGA, of course). 

PLUG CORNER

Here are some new echoes to pestle and annoy your boss about:

CAVING (moderated by Nail Craft)

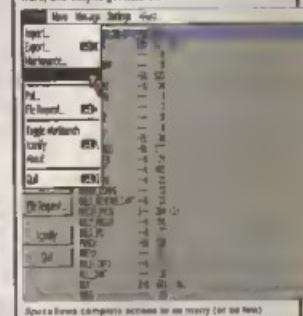

This beard is all about, erm, caving. If your boss doesn't like the echo you can get it yourself from the following boards: Aspects (tel: 061-708-9330), Cassabobs (tel 0223-411066) and Cavem: (tel: 061-798-1770).

PRATCHETT

A widely available echo all about Terry 'Discworld' Pratchett.

REGION25

This is good for a laugh. It's where the real fighting goes on. There is nothing so bitchy as a sysop scorned. Here's a list of some interesting boards to log on to. I'm told this one has a friendly

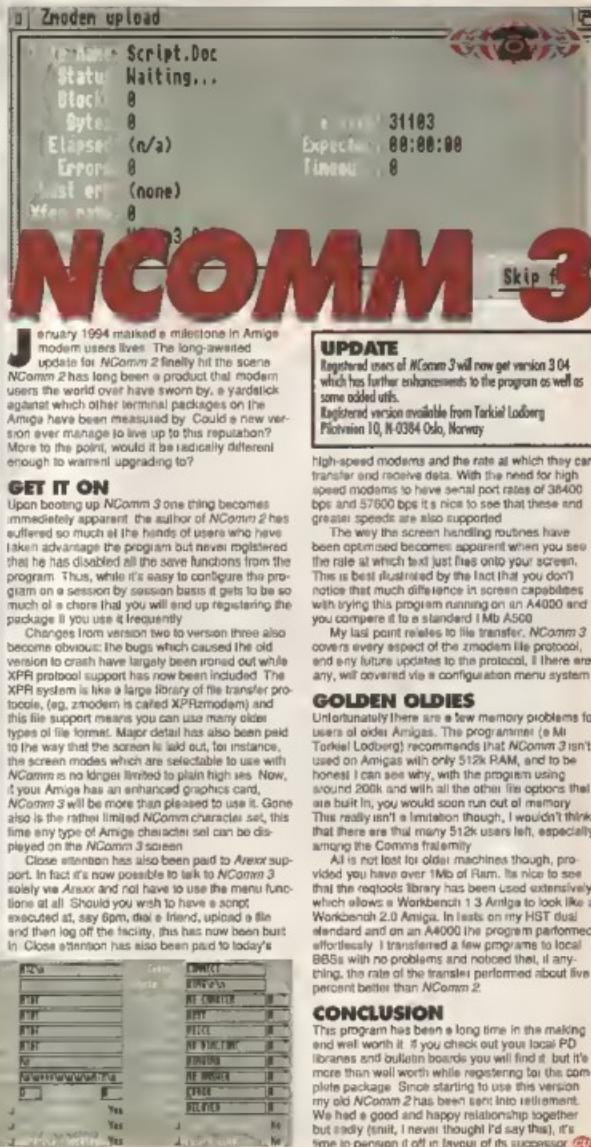

Spotsylvania complete access to as many (or as few) e-mail as you like. Once you have configured your system, you will have a private E-mail area, plus the local, regional and international sections.

Screen Phone Dial

**What's this, even more
Comms information?
Well, you asked for it
and now you got it.
So, your eyes are not

January 1994 marked a milestone in Amiga modern users lives. The long-awaited update for NCComm 2 finally hit the scene. NCComm 2 has long been a product that modern users the world over have sworn by, a yardstick against which other terminal packages on the Amiga have been measured by. Could a new version ever manage to live up to this reputation? More to the point, would it be radically different enough to warrant upgrading to?

GET IT ON

Upon booting up NComm 3 one thing becomes immediately apparent: the author of NComm 2 has suffered so much at the hands of users who have taken advantage of the program but never registered that he has disabled all the save functions from the program. Thus, while it's easy to configure the program on a session by session basis it gets to be so much of a chore that you will end up registering the package. If you use it frequently

Changes from version two to version three also become obvious; the bugs which caused the old version to crash have largely been ironed out while XFR protocol support has now been included. The XFR system is like a large library of file transfer protocols, (eg. zmodem) is called XZP(zmodem) and this file support means you can use many older types of file format. Major detail has also been paid to the way that the screen is laid out, for instance, the screen modes which are selectable to use with NComm is no longer limited to plain high res. Now, if you Amiga has an enhanced graphics card, NComm 3 will be more than pleased to use it. Some is also the rather unusual NComm characters set, this time any type of Amiga character set can be displayed on the NComm screen.

Close attention has also been paid to Arexx support. In fact it's now possible to talk to NCComm 3 solely via Arexx and not have to use the menu functions at all! Should you wish to have a script executed at, say 6pm, dial a friend, upload a file and then log off the facility, this has now been built in. Close attention has also been paid to locate/e

UPDATE

UPDATE
Registered users of *McCom 3* will now get version 3.04, which has further enhancements to the program as well as some added utility.

Registered version available from Torkild Lofberg
Flotviken 10, N-0384 Oslo, Norway

high-speed modems and the rate at which they can transfer and receive data. With the need for high speed modems to have serial port rates of 38400 bps and 57600 bps it's nice to see that these and greater speeds are also supported.

The way the screen handling routines have been optimised becomes apparent when you see the rate at which text just flies onto your screen. This is best illustrated by the fact that you don't notice that much difference in screen capabilities with trying this program running on an A4000 and if you compare it to a standard 1 Mb A500.

My last point relates to file transfer. NCom3 covers every aspect of the zmodem file protocol, and any future updates to the protocol, if there are

GOLDEN OLDIES

OLDER COMICS
Unfortunately there are a few memory problems for users of older Amigas. The programmer (Mr Torleif Lodberg) recommends that NCCom 3 isn't used on Amigas with only 512K RAM, and to be honest I can see why, with the program using around 200K and with all the other file options that are built in, you would soon run out of memory. This really isn't a limitation though, I wouldn't think that there are that many 512k users left, especially among the Comma fancommunity.

All is not lost for older machines though, provided you have over 1Mb of Ram. Its nice to see that the netools library has been used extensively which allows a Workbench 1.3 Amiga to look like a Workbench 2.0 Amiga. In tests on my HST dual standard and an A4000 the program performed effortlessly. I transferred a few programs to local 8865s with no problems and noticed that, if anything, the rate of the transfer performed about five percent better than NCron 2.

CONCLUSION

This program has been a long time in the making and well worth it if you check out your local FD libraries and bulletin boards you will find it but it's more than well worth while registering for the complete package. Since starting to use this version my old AComm 2 has been sent into retirement. We had a good and happy relationship together but sadly I must, I never thought I'd say this, it's time to pension it off in favour of its successor 

AMITEK
FRIENDLY TECHNOLOGY

Designed to bring you high quality and performance at affordable prices, Amitek peripherals offer outstanding value-for-money they are built to ensure easy fitting, and trouble free operation - making them a pleasure to use. Amitek products are also thoroughly tested and very reliable so reliable that we are pleased to offer a full two year warranty on the Amitek products detailed here.

AMITEK - FRIENDLY TECHNOLOGY

AMIGA

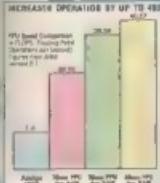

PERIPHERALS FOR ALL AMIGA SYSTEMS

HAWK

RAM UPGRADE & MATHS ACCELERATOR

FOR THE AMIGA 1200

Maximise the processing power of your Amiga 1200 with the latest generation of software which makes more demands on Amiga memory and technology. The Hawk RAM Upgrade and Maths Accelerator is the best 70-MHz RAM upgrade to support a superfast 68020 FPU. It includes a 2Mb RAM board, a 2Mb Maths Accelerator card and a battery backed clock. The Hawk RAM Upgrade can be easily fitted and comes complete with a 2 year warranty. The Hawk RAM Upgrade is a simple and cost effective solution, allowing you to select the memory which suits your requirements.

BUILT-IN BATTERY BACKED CLOCK

- Plug straight into Amiga 1200 socket - no soldering required
- Upgrades FAST RAM board to 1, 2, 3 or 4 Mb
- Uses industry standard accelerated SGRAM for easy upgrades
- Two 2Mb RAM modules and one 2Mb Maths Accelerator
- 2Mb of 40MHz PLCC enhanced processor
- Comprehensive easy to follow manual with illustrations
- Works with all A1200 and A1200HD computers
- Does not invalidate your A1200 warranty
- 2 year warranty

THE SILICA SERVICE

Before you choose what to buy, you need to know what you want. That's why we've got a wide range of advice and support available online. Come along to our website, www.silica.com, and see what's available. You'll find a wealth of information, news, reviews and forums, plus many other useful services. Coming soon, you'll be able to buy from us online - just a few months after you have made your purchase, when you may require additional support or advice. We'll be there to help you, the company you buy from contact you with details of our new products! At Silica, we ensure that you will have every opportunity to get the most out of your Amiga system, with a relationship with us that is based on trust and respect, with an understanding which is second to none. Competent and reliable, the chosen name for our user friendly service and support is Amitek - experience the "Silica Service".

- FREE OVERNIGHT DELIVERY
- On-line ordering system in the weekend
- A small team for customer support
- FREE CREDIT CONTROL
- Access to technical experts via the e-mail service
- PRICE MATCH
- We build partnerships on a "Sense profit - Sense loss" basis
- ESTATE MANAGEMENT
- No fees & charges ever paid in a computer store

- PARTS - 100% UK MANUFACTURED
- BUSINESS & EDUCATION / GOVERNMENT
- VOLUME PURCHASES AVAILABLE
- TEL: 0171-408 0000

Questions answered, problems solved. The Q&A boys are on the ball!

of Amiga. It won't be long before you're an Amiga expert just like me (big head - ed), so keep on in there. To answer your questions:

1. Always listen to your mother. Although swapping disks is a time consuming and tedious task, as long as you don't use excessive force the drive should continue to work for a long time to come. Remember, your Amiga has a year's warranty, I've been using an A500 for many years now, and the drive still works perfectly.

2. You can't understand Easy Amiga? Really? Do you have the full package, with the menus and everything? If, you try reading through the manual again they should be able to help you.

3. Don't worry about AmigaDOS, most people don't understand it. This isn't helped by Commodore's decision to not include an AmigaDOS manual with the A1200. If you are keen to learn about it then keep reading CU AMIGA, or nip down to your local library and seek them to get in any

of the relevant (and useful) Bruce Smith Books.

4. Ask your mum for some pocket money, and send it off to 17 Bit Software (tel: 0924 366982). Ask them for the best A1200 demos they've got - Nine Fingers is quite clever.

MISSING RAM

I have an Amiga 4000/030, 4Mb of fast RAM, 2Mb of chip RAM and a 240Mb hard drive. However, my RAM disk always has 75K occupied even when there aren't any programs or background tasks running. When I insert the RAM disk in the Shell, there appears to be three directories there: the standard ENV, Clipboards and T. I have tried to delete these three directories but the computer tells me that they are in use, even when they appear not to be. This is extremely annoying because it eats up my precious RAM! Can these files be installed on the hard disk instead? Why are they there and how can I delete them? Steven Brown, Darby Green, Camberley, Surrey.

Personally, I think 75K is a small drop in the ocean of a whopping 4Mb of RAM. The files you mention as occupying too much space are actually good things - you shouldn't delete them.

The reason they are "in use" even when there aren't any programs running is because I'm operating system is using them. Therefore it would be extremely ill-advised to delete them.

The T drawer is a temporary

storage place. Many programs use it, and having it in RAM speeds up a lot of operations. If you edit the startup-sequence you can alter it to reside on the hard disk if you really want, although the benefits are negligible.

The clipboard is an extremely useful concept. Many programs allow cutting and pasting, but the really clever ones will support the clipboard. This means one program can cut some text, and another program can paste it. In the meantime the data is stored in the clipboard's directory.

During the startup-sequence, the ENVARC drawer is copied from the Workbench partition to the ENV drawer in RAM. This ENV directory contains all sorts of useful information. Some applications will keep their settings here, but you'll also find default icons and all sorts. ENV is a very useful thing, so don't try and nuke it! If you really want to save RAM, always switch off the Workbench screen when running an application. Most programs should have this as an option. If you can't do this, make the Workbench use as little memory as possible by cutting the colours down to two, and shrink the screen down to 640x200. This setting can be saved as a preference file, which you can then save out on the Workbench.

Incidentally, I hope your A4000's fast memory is made up from a single 4Mb SIMM. If you have a 1Mb SIMM fitted, you'll have to throw them away when you need more memory. Actually, I had a bit of luck with a dealer that was prepared to give me a good trade-in deal on my two 1Mb SIMMs, so shop around.

JOHN KENNEDY
Some time ago John repaired a broken A4000 and in return they built him a nice new office near his home. Lucky, eh?

ANDY LEANING
Andy has just moved into new premises - a brand new house. Nondins to say it has been designed to look like an Amiga!

MUMMY SAYS...

I am a novice Amiga user and I know absolutely nothing about how to use my brand new A1200. Please can you give me some advice and a few pointers.

1. My Amiga has no hard drive and no external floppy drive and I find the constant disk swapping very irritating. I also worried that it might damage my machine. My mother says that the machine must be built for this, is she right?

2. I would like to learn a programming language to create demos and games, but I find most languages very hard to use - even Easy Amos

3. I cannot understand Amiga-DOS at all.

4. I have very little money, and I would like some good cheap software? Where could I get some?

A.N. Other, Forrest Hills,

Camberley, Surrey.

Too shy to put your name, sh?

INSTALL BLUES

I have an Amiga 1200 with 4Mb of RAM, a co-processor and a 185Mb hard drive. I have tried to install Star Trek and Deluxe Paint IV but neither of these programs will run. How do I get these programs to run?

Also, how can I get programs such as Maxpaint+ to use the higher resolution screens available, now that I am the proud owner of a Microvane monitor?

Adrien Bernasconi, Shoreham-by-

Sea, West Sussex.

I followed the instructions that came with Star Trek and didn't have any problems. So, I suggest you read the manual again very carefully. As Deluxe Paint came with your A1200 pack, there probably weren't any specific hard disk installation instructions. In this case, drag all the icons from the floppy to the hard disk but make

LETTER OF THE MONTH

Being a co-opie (sic) owner as well as an amiga owner I thought that some things need clearing (sic) up about the cd32 owners.

1. sell
2. stop hoping for conversions (sic) of pc megacd games its (sic) not going to happen (sic)
3. There was a rumour (sic) of x wing being converted guess what its (sic) not
4. Don't (sic) listen to mags there (sic) full of bull!
5. A1200 cd drive ha ha
6. buy a pc
7. use the cd32 as an ash tray
8. swap for mega cd
9. looking forward to tx in february (sic) try june instead.
10. You have always (sic) got liberation nice game pity about the graphics and slow down
11. good buy (sic) you losers

The CD32 Hate Club, whereabouts unknown.

Wow! Well, that's me put in my place. How could I possibly argue with such a well written, clear and accurate letter? I'll dump my Amiga and buy a Mega CD tomorrow.

» Internal IDE hard drive advertised for £129.99 and would like to know if this is good value. It has 840Mb. And, is it easy to fit at home?
Graham Gordon, Birmingham.

No, you don't need a multivideo monitor. As the A1200 can be used with an ordinary television set, the video output must be about 15KHz. This means it can work perfectly with a standard colour monitor such as the Commodore 1044S.

However, try this. Adjust your workbench screen so that it is 640 by 512, the screen will be in an interfaced mode. Looks nice, doesn't it? Lots of room for icons and windows. Notice how the fonts in a DTP or Page Publisher program look great. Pity about the flickering though.

With a multivideo monitor, the flickering will disappear. It's as simple as that; larger displays, no flicker. If you can live with smaller-sized screens or you don't mind the flicker, then you don't need a multivideo. You can still use all the extra colour modes offered by the AGA chipset.

All games use the low-res modes so that they can be displayed on television, and so a multivideo would have absolutely no benefit if that is all your Amiga is used for. On the other hand, most productivity software titles now make use of the new screen modes and so, when using *Final Writer* or *Wordworx*, the screen displays are entirely proportioned and very easy to work with.

The value of the hard drive depends on if it has a 2.5 inch or a 3.5 inch mechanism. The smaller drives are easy to fit but a bit expensive. The 3.5 inch drives are cheaper but require a bit of effort. I still think 640Mb is a small size, and you should try for 130Mb or 214Mb for a first drive. If you can possibly afford it, certainly, any less than 64Mb and you will be wasting your money - you'll fill it within weeks.

HONESTY WINS

I am 15 years old and I own an Amiga 500. I have dabbled with AMOS and have come to the conclusion that it is crap. I apologize for this language, but I like to be honest and straight to the point, and I hope you will be too (no boffin jargon please).

I want to use my Amiga to learn to program. In the hope that one day I will be the number-cruncher behind some future Amiga titles, but I have come to realize that AMOS is not the way forward. I have sold my copy of AMOS and now I would like to ask a few questions:

1. Is the next step C?
2. I've had a peek at *Blitz Basic 2*. Is it worth taking a better look?

3. Is there an Action Replay cartridge available for the A600?

4. If not, why not?

5. What is the difference between C and Assembly?

6. Which program is used by the biggest percentage of software houses? Can you name two top games written in this?

7. Which program is likely to lead me to:

a. A career in programming?
b. Grief?

8. Where can I get any of these programs from, and how much are they likely to cost?

9. What do you advise me to do?

Please help.

I am serious about wanting to code, and really want to make it more than just a hobby.

Mike Howard, Runcorn, Cheshire.

I'm sorry that you've written off AMOS so quickly. AMOS is a good programming package, as it offers an integrated programming environment (editor, interpreter and so on) in one easy-to-use unit. It is also very fast and allows good use of the Amiga hardware. Many fine programs have been written in AMOS.

By the way, the term 'number cruncher' normally refers to computer hardware, you don't want to grow up to be a microprocessor do you?

1. The language C could well be the next step, but it depends where you are going.

2. *Blitz 2* is very good. Unfortunately, it is also BASIC-based like AMOS, so you might think it's crap. I think it is an excellent system though.

3. No, there isn't an Action Replay cartridge for the A600.

4. There isn't a suitable expansion port on the A600 to stick it in.

5. They are completely different languages. C uses vaguely english-like statements:

```
int i; for (i=0;i<10;i++)
{printf("%d\n");}
```

Assembler uses more simple instructions like:

```
move.w #10,d0
loop .jar
._printhdr dblw,d0
```

Assembler is very machine specific (the Amiga and PCs use totally different assembly languages) but very quick. C is also fast, but it is also platform independent - apart for the graphics and sound parts, a C program will run on an Amiga, a PC or a Mac. When writing games it is usually best to use a combination of both.

Neither language comes with any graphics or sound support. It's entirely up to you to write it all. This is what makes AMOS and Blitz so easy to use - all the hard stuff has been done for you.

6. Most software houses will use assembler, although some of

the more lesser-known use C and C++. Pick any game in the Amiga charts and it will be almost always Assembler, with lots of C here and there.

7.

a. The best language to learn would be C or C++.

b. It could be C. It's not easy, but I'm COBOL for some self-feeling.

8. You can get good C compilers from most Public Domain libraries. Look out for DICE and North C. There are also Assemblers in the Public Domain too, such as ASM86.

9. The choice of programming language isn't half as important as the way you program. Most software could have been written in any language, it's the way you write it that's important. Learning to program is independent of which language you use.

If you want to make programming your career, do some A-levels and go to university. Get a BS or BEng in Computer Science and start work for IBM, ICL or any other big company. Some colleges are starting courses specifically in programming video games, so ask your careers teacher at school.

Alternatively, learn to program (try as many languages as possible) and bluff your way onto a large computer company's applications test.

coloured picture. The resolution isn't great (about Teletext standard) but anything is an improvement on boring text.

Craig, if enough people send in ANSI screens I'm sure there can be an Art Gallery special. In the meantime, please send some of your best pictures to illustrate the Wired World column.

Incidentally, any other Sysops wanting a plug, please write to *Wired World*, or drop me an E-mail c/o Fidonet (my address is 2:443/13.4 and my BoB is Colin Turner et al. The Heart of Gold - tel: 0247-274910).

BASIC APPROACH

Please find enclosed a copy of a letter that I sent you in December 1993, and as yet I have had no reply from CU AMIGA, which I can't just understand.

As I pointed out, I am a newcomer to Amiga computing, and I thought you would give a bit more thought to us novices, besides which I thought your magazine was maybe the best one to buy as I have heard a bit of praise from others who read it.

Well that takes care of my little moan, now maybe you can help me with the following questions:

1. How do I go about entering BASIC into my computer, and what is the best language to learn?

2. Do I have to buy special software for the above?

3. How do I make any of my programs bootable?

John Robinson, Hartlepool, Cleveland.

I'm sorry, but there simply isn't space to answer every letter sent to Q&A. The space is limited, and we have to make best use of what we've got. Your last letter just didn't make it.

1. The Amiga doesn't have a programming language built in. You can try and use the supplied *Amazix* language to start with, but I suggest you buy a BASIC programming package such as *Easy AMOS* or *Blitz Basic*. Although C and Assembler can be described as more powerful languages, I strongly recommend you try AMOS or Blitz first.

2. Yes, Try Headz (Tel: 0525 718181) and EuroPress Software (Tel: 0255 589333).

3. This depends on the particular programming package you use, some won't create a individual stand-alone program, in which case you're stuck. Otherwise, it's a matter of copying the program icon into the WB Startup drawer, or inserting the name of the program in the User-startup file in the S: directory.

SOUND LAB

OctaMED 4 just isn't complete without a sampler pluggad into it, but which one should you buy? Tony Horgan emerges from the lab with some answers...

PART

4

Last month we gave away the brilliant OctaMED 4 music program, along with a stack of samples for you to use. There are even more samples on this month's coverdisk, but if you want to get the most out of OctaMED, you should start sampling your own sounds. Before starting to do this, however, you'll need a sampler cartridge. There are quite a few to choose from, with prices ranging from around £30 to over £200. Here's a quick guide to the main contenders to help you choose the one that's right for you.

All sampler cartridges come as a combined software and hardware package. The hardware contains the essential analogue-to-digital converter (the part that turns the sound wave into numbers that the computer can read). Just about all samplers plug into the parallel port at the back of the computer, and are compatible across all Amigas. Sound reproduction quality varies from one cartridge to another, but not to a great extent.

AUDIO ENGINEER PLUS 2

£159.99 HOBBYTE
TEL: 0727 856005

As it is the most expensive 8-bit sampler available, you might expect Audio Engineer Plus 2 to be the best, and it is.

Unlike most other samplers that plug directly into the back of the Amiga, Audio Engineer's hardware has a short connecting ribbon allowing you to place the unit on top of the Amiga, from where you can easily twiddle the controls on the front panel (users of the 'big box' Amigas will find it less accessible). There's a 'gain' knob on the

other side of the coin is the software. Now that you have OctaMED, you won't have to use the software that comes with the sampler. Even so, quite often the sampler's software will have extra editing features that you won't find in OctaMED, such as extra effects routines, real time effects processing, sampling into Fast RAM, hard disk recording and so on. So, bring forth the samplers

16 BIT SAMPLERS

OctaMED has the Amiga's standard 8-bit sampling and playback routines, so you can't use it directly with a 16-bit sampler. However, you could sample your sounds in 16 bits and convert them to 8 bits. This might sound pointless, but the down-graded samples will sound clearer than if you had just sampled with 8 bits in the first place. The Sunsite AD515 board, together with the Studio 16 software is the leading 16-bit Amiga sampler. It's a nice system, but it is geared towards creating soundtracks for video-visual projects, rather than making music. Available from Premier Vision (tel: 01724 4402) price £1,000.

Clarity 16 is a far cheaper option at £150, available from Microsos (tel: 0525 713671). Unlike the Sunsite system, Clarity doesn't sample to a hard drive, choosing instead to play off its sampler direct from RAM. The software is very basic, but allows you to trigger up to four samples from an external MIDI source, so long as your Amiga is fast enough. Clarity is probably best used as a sampler for use with a dedicated sample-playback unit,

sampler to give you more control over the incoming sound level.

Sound quality from the cartridge is excellent, with this best frequency response across the sonic range of any 8-bit sampler.

The software is second to none. It can sample into Fast RAM, which is very handy, as you can take massive samples in one go, and then chop them up and save them out in more manageable chunks. It doesn't have a massive range of effects, but it's the only sampler to have a time-stretch feature.

Time stretching is when you alter the speed of a sample, without changing the pitch, or vice versa. It's very useful for getting long loops and vocals to fit in a different tempo, when you don't want to alter the tuning. Even if you don't need

that, the software is still the most comprehensive and user-friendly of the lot. However, whether it's worth paying four times as much as you would for a budget sampler is a question worth debating.

MEGALOSOUND

£34.95 MICRODEAL
TEL: 0525 713671

MEGALOSOUND is a bit like the OctaMED, Microsos and Sunsite samplers. What's the difference? Well, it's got a bit more memory. MEGALOSOUND has 16MB of RAM, compared to 8MB for the others. It also has a built-in sequencer, and a 16-bit digital-to-analog converter. It's a bit more expensive, but it's also a bit more powerful. It's a good choice if you're looking for a high-end sampler.

MEGALOSOUND is a bit like the OctaMED, Microsos and Sunsite samplers. What's the difference? Well, it's got a bit more memory. MEGALOSOUND has 16MB of RAM, compared to 8MB for the others. It also has a built-in sequencer, and a 16-bit digital-to-analog converter. It's a bit more expensive, but it's also a bit more powerful. It's a good choice if you're looking for a high-end sampler.

£49.99 NEW DIMENSIONS

TEL: 0291 690933

Technosound has been around long enough to find its way into the heart of many Amiga users. The cartridge gives acceptable results, although it does introduce a little of its own background noise.

Features are in abundance when it comes to this software. There's hard disk recording, loads of real-time effects, a built-in sequencer and a RAM scan mode for taking samples fast in memory from previously loaded programs. You can also use the MIDI module mode to get your Amiga to act as an onboard MIDI device, to be controlled from a keyboard or a sequencer running on another system. The interface is clumsy, but if you can stand that, Technosound Turbo 2 would make a good buy.

DSS8 PLUS

£69 SILICA SYSTEMS
TEL: 081 309 1111

A clear plastic case gives DSS8 a thicker look than the other sub-£100 samplers, but apart from that, it's pretty much business as usual on the hardware side. It can be a bit noisy when used with the accompanying software, but strangely it performs better with third party software.

It's not that heavy on features, but does have a handy tracker, and the interface is easy to use. One unique feature it does have, is the software high frequency filter. If you turn this on before sampling, you end up with a lot less noise on your sound, which helps it grab very clean bass sounds. It's a bit over-priced for what's on offer, but does its job well.

GAMES PROGRAMMING WITH BLITZ BASIC 2

Daniel O'Connor

looks at Blitz Basic's data structure to find out why it's the games programmer's best friend...

So far all the demo programs we've written have been very basic indeed, consisting of no more than two objects (shapes) moving around the screen. However, whilst this might be enough for a very simple game like *Pong* or *Break Out*, it's perhaps a little bit too limiting for most games. Imagine how boring a game like *Project X* would be if there were only two aliens to kill and one laser!

Keeping track of just one or two of shapes is very easy indeed, but what do you do if your game uses many different objects all of which may appear on the screen simultaneously, yet they move independently of each other? Using the rather笨拙 approach of assigning each object a set of separate variables, keeping track of just four or five objects could be very code intensive! Take a game like *Alien Breed*, for example. Because the aliens do not move around in fixed movement patterns like a squad of soldiers, each alien needs its own set of parameters which defines where it is on the screen, when it's doing and so on.

Of course the simple solution would be to assign a set of unique variables to each alien: ALIEN1X, ALIEN1Y, ALIEN2X, ALIEN2Y and so on. Okay, so it would work but you'd soon end up getting completely bogged down in code. What's the solution? Well, ask any games programmer and regardless of their background or the types of game that they write, chances are they'll give you the same answer time and time again – the data structure. Fact is, the data structure is perhaps the most important element in any games programming project and once you've mastered the theory, you'll find that there are very few games that you can't write yourself!

The data structure in one of the most powerful aspects of languages such as C and Modula-2, but it's been strangely absent from most BASIC implementations. Unlike AMOS, Blitz supports true data structures using its powerful NEWTYPE statement. This is a much more powerful facility than the conventional (and rather limited) arrays that AMOS games programmers have to contend with!

DATA DESTRUCTION

A data structure provides the games programmer with a quick and easy method of grouping together several unique items of data under a single heading – ALIEN, for example. Say you wanted the following data of data to be held on each alien in your *Alien Breed* game:

XPOS: the X screen position of the alien

YPOS: the alien's Y screen position

Data structures are very important if you want to write games that have many objects moving around the screen independently of each other.

STATUS: the alien's status. What is the alien doing?

DIR: the alien's direction of movement.

You would therefore create a 'NEWTYPE' structure that held all the information in the form of a data structure. And, in true Blitz Peterash-like, here's one I created earlier . . .

NEWTYPE .alieninfo

XPOS: w

YPOS: w

DIR: b

STATUS: b

END NEWTYPE

There are a couple of points worth noting about the above NEWTYPE definition. For starters, note how a full stop separates the name of the data structure. This is very important as it tells Blitz that this is a definition and not a data structure in its own right. All the NEWTYPE command does is tell Blitz the format of your data structure, it doesn't actually create the data structure itself. Think of it as drawing up a set of blueprints for your data structure.

If you've even done any form of 68000 assembly language programming then you'll recognise the instruction .w placed after each variable definition. Just like the assembly language, these tags tell Blitz the type of data that the variable will be expected to handle. Blitz supports a number of data types (not to be confused with the data types facility offered by Workbench 3.0), each with their own unique identifying letters.

Here's a quick rundown of the more commonly used types:

.b = Byte

.w = Word (2 bytes, 16 bits)

Player's Ship Data Structure

NEWTYPE .ship

XPOS: w
YPOS: w
SPEED: b
STATUS: b
FRAME: b
ELENE: b
END NEWTYPE

Every object in a game has its own data structure that tells Blitz how the object should behave and its current status.

.l = Longword (4 bytes, 2 words, 32 bits)

.f = float (floating point number)
Defining a data structure using the NEWTYPE command is only half the battle as it's nothing more than a definition that tells Blitz how to store data. In order to set aside the memory which will be used to hold the actual data, you need to create an array using the DIM statement like so:

DIM alien.alieninfo(50)

This would give you 50 copies of the same data structure and would also automatically set aside the memory necessary to hold all that data in memory. Note, how the name of the data structure is split into two halves with a full stop separating them. Look carefully and you'll notice that the second half of the data structure definition is the same as the name we used when defining the format of the data structure with the NEWTYPE command. What we're doing is telling Blitz to create an array of data structures called 'alien' using a newtype called 'alieninfo'. Once the array of data structures has been created, we

no longer have to refer to the array using the
‘.at(n)’ extension – `elen(n)` would do the job
just as well.

Accessing the individual items of data inside a data structure is very simple indeed. All you need to do is provide **Basic** with what can be best described as a 'pathname' to the variable you're attempting to access. Say, for example, you wanted to write a value of '15' into the **XPOS** variable in the fourth data structure in our array (that is, **alen[3]**) – don't forget that arrays start at element zero and not element one! You would therefore use the following command:

The key to all this wonderful variable manipulation is that little forward slash character '/' that separates the alien(3) bit and the name of the variable itself. Just like in AmigaDOS, this slash character works as a separator to differentiate between the different levels of a data structure.

Also, like AmigaDOS, there is a much easier method of accessing the date within a data structure than you will need if you type in the entire pathname every time you wish to access a variable. You can tell BD to change its 'current directory' (in AmigaDOS terms) so that it literally moves inside the data structure. The AmigaDOS command that does this would be **CD** but BD has its own TD-like command – **USEDIR**. All you need to do is to pass the command the pathname and your data structure and you can then access your variables directly. Going back to our earlier example, you could therefore use the same lab with the following lines of code:

It's worth noting that despite the fact that we've used the "USEPAH" command to lock on to the data structure that we're interested in, Blitz still insists that we put a forward slash character before any variables within the data structure. Although it can make your code look rather confusing, you'll soon get used to this rule.

CHAIN LETTERS

Using an array to group together lots of data structures of the same format is almost as well as you know that every data structure "element" in the array will be used. On the other hand, only a couple of the array elements are ever in use at any one time, scanning through the entire array every time you wish to update your aliens (or whatever) is wasting precious processor time. A much faster method is to take advantage of *Bitwise* Register lists.

Anyone who has studied computer science should feel at home with the linked list. For the benefit of those of you without HNDs though, a linked list is a complex array that provides instant access to the elements within an array that are actually used. What's more, they need to run in *order* (like a conventional array) - *BUT* Basic automatically handles an index, that points to the next used element within the linked list. So what? I hear you say. Well linked lists are very useful in games programming as they allow you to write routines that process only those elements within an array that are actually in use. Say for example, you had an array that handled your aliens. If this array handled a maximum of 100 aliens but only three aliens were actually on the screen, there would be very little waste in scanning the other 97 empty array elements. You could easily do this with the conventional array - BASIC linked lists do all the work for you.

In order to create a linked list, all you have to do is to use the "Dim List" command rather than the "Dim" command when you first create your array. Blitz will then know that the array should be a linked list rather than a conventional sequential array. Unless conventional array, you should never access an linked list array element unless you know exactly what you are doing. Instead, you should use the commands that Blitz offers that allow you to move back and forth through the structure of the linked list. Check out the box below for a complete rundown of the commands on offer.

LINKED LISTS

RESETLIST. Goes to the very first element in the linked list. Even if there aren't any items in the array, this command must be called

CLEARLIST: Empties the specified array

ADDFIRST: Allows you to insert data into a data structure which is then treated as the first element in the linked list. This causes all other elements to be "bumped" forward by one.

ADLAST: Allows you to insert data into a data structure which is then tucked onto the

ADDELEM: Allows you to insert a new list element directly after the current element

KILLITEM: Kill the current linked list element.
PREVITEM/NEXTITEM: Move back and forth through the linked list.

FIRSTITEM|ASTITEM: jump directly to the

LAST-IMPLEMENTED compaction is the first or last elements in the linked list.

[View all posts by \[Author Name\] →](#)

The diagram illustrates a pathfinding process. A green dot at the top left represents the start node. A red dot at the bottom right represents the goal node. The path is indicated by a sequence of nodes connected by arrows, forming a continuous line. The path starts at the green node, moves right, then down, then right again, then down, then right, then up, then right, then down, then right, then up, then right, then down, finally reaching the red goal node.

Wastegame - el uso cumplido de los enemigos para controlar o dirigir el comportamiento de los jugadores.

GET THE LOOK

If you're writing an arcade shoot 'em up game along the lines of *Project X* or *Björn's Army*, one of the most important aspects of the game design is the attack patterns used by the marauding aliens that fly across the screen to attack the player's ship.

Most amateur games programs stick with the simplistic "straight line" that moves your alien from one side of the screen to the other with little or no variation in their flight pattern. Although this can be effective if the screen is hectic enough, just about any game's player worth their salt will be able to beat your game just by moving their ship to

A less interesting and more challenging method of controlling groups of aliens is to use 'movement paths' or 'attack patterns' as they are also known. A movement path defines what direction a shape (or a group of shapes) must travel to get from its start position to the point where it leaves the screen (if it gets that far). For more complex patterns involving many changes in the direction and even the speed of a shape games programmers use what is commonly known as a 'look-up table'.

Although the name may sound very grand, look-up tables are a very simple programming principle. A look-up table contains a list of coordinates that defines the path of an object as a series of steps. How many steps you have in the look-up table defines the complexity of the object's movement path. For example, if you have just two steps in the path, the object would appear, move once and then disappear – hardly very impressive.

The data in a look up table consists of sets of co-ordinates that define what programmers call 'Delta' moves. Delta moves are nothing more than relative values that define where an object should move relative to its last position. For example, if an item was positioned at 100, 200 and the delta co-ordinates were 10, 20 then it would move to 90, 180. Now if the previous delta co-ordinates is applied to our first games programme, while a utility which allows them to be movement patterns which are then saved to disk as co-ordinates. Alternatively you can write your programme in such a way that the values held in the look up table are generated by 'run-time'. That is every time the pattern is 'run'

```

One of the most powerful aspects of the Duktape language is the `NEWTYPE` facility which allows you to use true C-like data structures and linked lists.

BACKCHAT

Roll up your sleeves, get pen to paper and look intellectual. Tony Dillon enjoys a good argument or a chat.

LETTER OF THE MONTH

NO MOTION

So Commodore have finally announced that they are going to release the CD-ROM drive for the A1200. Surprise, surprise there is no FMV card in it. Is this the same drive that they've been developing for the last year? The one that they still weren't going to release because they couldn't fit an FMV card to it? Or is it a completely new drive? That would explain the fact that it isn't going to be released until September, an amazingly long time considering the number of people who, I myself, bought an A1200 with the definite aim of upgrading as soon as the then proposed drive became available. WHY IS IT TAKING SO LONG!

Okay, so the drive won't be able to hold an FMV card. So what? I can't see any situation where full motion video would be any use except for watching films, and my VCR has that purpose quite respectfully at the moment. Perhaps Commodore think that FMV-only games are going to be the way forward. Quite why I don't know, as the PC CD-ROM market has had MPEG for a while now, and there is no sign of any true-colour only games. Even companies like Sales Curve, who are developing FMV games, are developing 256 colour versions at the same time.

The reason? Only a few people actually have FMV on their machines at the moment. Anyone who released for that small market would not make money, so software houses have to play to the lowest common denominator. I'm just a games player, and this has been apparent to me for quite some time. Why has it taken so long for Commodore to get it?

Denise Reddy, Lisa.

I agree with you totally as regards the FMV-only side, however, there will be FMV games appearing, although they won't be exclusive. The whole software world is turning to FMV at the moment, and there is the chance that one day it will become as standard as a low resolution 32 colour screen is now, so you can't blame Commodore for wanting to be on the wagon, can you?

GO FASTER STRIPES

I read with interest T.S. Nelson's letter in the April issue of CU AMIGA concerning the rumoured existence of an accelerator for the A600.

Well, does it exist or doesn't it? Your magazine is supposed to be up to date with the latest in Amiga news, so I would have thought that you would be in a position to find out and inform your readers, after all it is in their best interests. I suspect that it's not. In Commodore's best interests as it will stop people looking out for an A1200. Frankly I could not care less about Commodore and their financial problems as I am one of the many who bought an A600 when it was being marketed as the replacement for the A500.

I now have the extra 1Mb up the trapdoor, the 4MB in the PCMCIA slot and an 850Mb hard disk. I could easily use an accelerator, more memory and Maths co-processor but I'm not going to spend £299 on an A1200 just to be able to add it to. Who cares about AGA chips? Their new display modes aren't genocidal anyway.

I think a fair example of Commodore's marketing and sales ability is the fact that they allowed 10840 monitors to go out of stock over the Christmas period. I wanted to get one but couldn't, so in the end I bought a Mitsubishi Multisync with a 256 patch that can display the output (with an adapter from Trilogic) from almost any computer and very sharp it is too! I wonder how many other sales Commodore lost because of their ineptitude.

Okay, so we all know that Commodore doesn't really care about what happens to their customers but we don't have to accept it. We don't have to play their game. Perhaps if third-party manufacturers knew how many A600's were sold (and still are!) it might make them consider that a range of products for this machine are still a viable commercial enterprise.

So to Mr. Pleasantase I say, service your existing client base and stop worrying about how wonderful the C64 is – or face future repeat business. You need to deal with existing problems before going out and creating a whole lot more!

I look forward to hearing from manufacturers concerning new products for the A600
Alan Peterson, Aldershot.

Andy Laesing answers: Firstly let me assure you that Commodore do care! But as is often the case some things are beyond their control.

the monitor problem was just such an instance. To answer your question about A600 peripherals I spoke to the several of the leading Amiga developers: GVP, Power, Amitek, etc.

As I write this none of them are planning an A600 accelerator. The reasons given were all the same: lack of demand. None of these major developers believe A600 owners want an accelerator and therefore have no plans to produce one.

The root of the problem is that Commodore did such a good job on pricing the A1200. As you point out the A1200 is only £299 – a good accelerator for the A600 would start at around £150 and rise to about £250 with extra RAM. Most developers feel that average users won't want to spend £199 on an A600, and then another £200 (total £399) on an accelerator when they could buy a 1280 for £299 which would have the same power!

But it's not all bed news! Amitek, Power and GVP would consider changing their position if they thought there was demand. So if you want an accelerator for your A600 write to and tell them, the CU AMIGA team would also be interested, drop us a line letting us know why you think on them should be an A600 accelerator and what you would like in it! Remember, it's in your hands!

MARK UPS

In reply to Alison Kirk's reply (April) to my letter (March), she is totally missing the point. What I was saying was that the music industry charges reasonable (if?) amounts for its goods making only a 50% profit (if?) whereas its software industry is making a 2000% profit on its goods.

I know we are all being ripped off left right and centre, but maybe a bit more by the software houses than anyone else.

50p for a can of cokal Es by eck less, yet when I move up North, it's only 35p a can up 'ere, by gum less! P. Clague, Wimborne.

35p! With savings like that, how can you be concerned with software industry price inflation? But Coke is getting cheaper here in the south too. All you've got to do is go to France!

TEAM TALK:

What sort of Carry On is this? Asked publisher Mike Frey, after catching the entire team playing doctors and nurses on the fourth floor of EMAP Towers. And he was right to ask the question...

ALAN DYKES

"Carry On Amigo" said Alan, doing his damnest to imitate someone's name he can't remember from the innumerable Carry On movies. "I'll keep wagging my stick in front of the screen like this, something's bound to happen!" (ho, ho) Very sed. But it gets worse.

LISA COLLINS

Attempts to persuade Lisa to imitate Barbara Windsor failed miserably. "Carry On movies are degrading and sexist," said Lisa from her sofa box. "They are the product of low intelligence and filthy minds." Phwoarr – Lisa's lovely when she's mad.

IMPRESSIVE SKIDS

Just a couple of days I bought Skidmarks for my A500 and was completely amazed by the quality of the game. It just shows how the Amiga 500 can still thrash any Jap crap console when it comes to playable, smooth running and graphically amazing games. Many of my friends have Sega Mega Drives and claim that the Amiga would never be able to have a game as good as Sonic The Hedgehog 2, but why we want a game which to compete you just need to wedge the joystick right and select autofire.

I am also the proud owner of a CD32 and have recently bought Microform for it, and was also amazed by it. I am now waiting for the SX1 expansion module and keyboard which may one day emerge so that I can play Skidmarks with AGA cars.

It is good to see that software manufacturers are putting the playability before graphics, unlike on the consoles. I hope Acid Software will bring out some games for the CD32 and it is also nice to see that the price for CD32 games has stuck around the £25-£30 mark (like the Mega-CD) and the CD is now not just being used for CD soundtrack padding, but used to its full potential. Long live the Amiga and as the Commodore poster says: "To the good will take Sage eyes."

P.S. Tony D. should win an Oscar for Click. R. Frost, Wakefield.

We always welcome positive letters, and yours is one of the most positive we've come across in a long time. It's a shame you had to bring Click up though, as Tony ran screaming from the room as soon as someone mentioned it.

HONEST POLICY

I must thank you for the first honest review of Labyrinth of Time for the CD32. Yes the graphics are stunning but the game itself is so boring! You wander around for hours doing very little except getting stuck occasionally. When you find an object to pick up or use it is usually required way over in another area of the game and you spend the next 20 minutes trying to get back there to see if it really does do the job.

As for the jigsaw maze, you can stick that in your basket of oranges! It's pretty and weird, but so annoying. This is the one place you need the autoslapping, and it doesn't work!

I would also like to thank you for being the only magazine to point out the worry I had. Every review spoke only of superb CD32 stuff – none of them mentioned that the box said the game wouldn't run on a bog standard A500 or CDTV. I kept thinking I had been nipped off and had the wrong version!

Steve Celkin, Canvey Island.

Everyone knows that CU AMIGA are an honest bunch. We like to pride ourselves on accurate reviews, viewed from the gamers' point of view, instead of technical or industry viewpoints.

TONY DILLON

The Sid James of computer games was on top form at the EGX, legging it around the show with his hair down, grabbing everything he could get his hands on (sooo-er!). "I'd like to keep myself absent from the latest software," said Tony (ho, ho, glaggle, gaggie, yok, yok).

ANDY LEANING

This maverick master of the technical world, our Andy wasn't holding anything back this month (ho, ho!). "What do you get if you put a piece of software down the front of your trousers and some hardware down the back?" "Underwear!" said he (giggle).

THE FAR SIDE

By GARY LARSON

"And notice, gentlemen, the taste I've got the more Simmoneau sounds like a ministerboat."

RAMBLING FREE

It's been quite a while since I've felt compelled to write to a computer magazine but I found (Mr. Faraday) and I have spent the last few years contemplating life, the universe and everything. Not so long ago we came upon that hallowed subject of the computer games industry. We rammed into our years gone by, those heady days when the Commodores 64 ruled the computer world. Oh how we would sit and wait nine or ten minutes for the games to load. It was in those early days that we learned patience. Games were aplenty and you would never go short, some of the better games costing only two pounds.

But that's all in the past and now we have moved onto bigger, badder and better machines. There's just one large difference between the older machines and the new, apart from the obvious, and that's the competition that used to run between companies to make better games. It seems that there are only a couple of international corporations (with hedgehog and plumber latches) that chum out mediocre games dressed up with pretty graphics and sound and sell because of the media hype rather than creating hardcore, kick ass playable games (eg Cannon Fodder, Alien Breed). It seems that one company's idea, no matter how good or bad, is copied and decorated with different graphics. After all what difference is there between Street Fighter (1, 2, & Turbo editions), Mortal Kombat and Body Blow when they are all stripped down to the bare bones. Some people might argue that it is the extras that make the game, but those effin' extras cost, and can leave you feeling cheated and broke at the end of

TONY HORGAN

"Ooooh, noooooo," said Tony, who spent most of last month in bed (yuk, yuk). "The ads of French are right." "It's Tony Day, you're about three months out of date." "Ooooh, never!" he continued, getting one line closer to a reprimand (no!) by the minute.

JOHN KENNEDY

The star performer (well, well!) of Amiga Q+A was outraged this month: "you can't do that you devils, you'll get it all down the front of your... ooooooh!" he said as his glasses steamed up. "You scury devils!" he exclaimed as the heat fled right continued.

CU

AMIGA

SUBSCRIBE TO CU AMIGA NOW & RECEIVE A BRUCE SMITH BOOK WORTH UP TO £21.95!

CU AMIGA is the magazine for comprehensive coverage of software and hardware for the A500, A500+, A600, A1200 and CD32. Your subscription guarantees you the latest news and honest reviews, in-depth features and tutorials plus the best coverdisk software, utilities and game demos available... allowing you to sort out what's best from the rest.

Bruce Smith Books

Subscription offer only £49.99!

Receive either *Mastering Amiga Beginners* or *Mastering AmigaDOS 3 Tutorial* from top Amiga Book publishers, Bruce Smith Books

MASTERING AMIGA BEGINNERS

The ideal introduction to computing with your Amiga. You'll find the step-by-step explanations easy to understand and you'll soon be confidently carrying out essential procedures such as formatting disks, copying files, setting preferences and working from a shell window.

From word processing to programming, including paint programs, databases and spreadsheets, the second part of this book introduces you to the wider world of Amiga computing. It explains what you can do and how to go about choosing software and hardware for you requirements. Take control of your Amiga. The subjects covered in this book include:

WORKBENCH FAMILIARITY, PREFERENCES, UTILITIES AND TOOLS, BEGINNER'S AMIGADOS, GETTING YOUR PRINTER TO WORK, POINTS, GRAPHICS, DESKTOP VIDEO, COMM, MUSIC & SOUND, UPGRADING, PUBLIC DOMAIN, PCS, VIRUSES, INTRODUCTION TO PROGRAMMING RRP £19.95

MASTERING AMIGADOS 3 TUTORIAL

Mastering AmigaDOS 3 Tutorial is the complete introduction to AmigaDOS; designed to help the beginner become the expert. Chapter summaries and a Workbench/AmigaDOS primer are among a number of new features designed to make this subject accessible to the novice user.

From formating a disk to writing scripts, using pipes and multi-tasking, over 400 pages explore every aspect of the Amiga's operation. This book is packed with useful DOS one-liners and programs. The current version is completely updated for DOS 3.0 on the Amiga A1200 and 4000. RRP £21.95

AMIGA NEXT MONTH

"Hi, I'm Tony Dillon and this is the CD32. Next month I'll show you some pictures of Cyberwar on it and you'll probably faint with excitement."

GAMES GALORE.

Valhalla - Oh my god! Just when you thought a cute adventure was impossible!

Robinson's Requiem - If you're ever likely to get stranded on a desert island you'd be well advised to read next month's review.

Ishar 3 - the sequel to the sequel. If you're going to spend any money on software this summer don't miss CU AMIGA!

PLUS: FOOTBALL MANIA CONTINUES!

GETTING SERIOUS...

Following this month's top cover disk, Video-tracker, and our Graphics and Video feature we've got some top new products lined up including Video Creator, GVP's Time Base Corrector and the DPS PAR card. We also hope to bring you an exclusive review of a brand new graphics package. Plus: they've done it, they've upgraded Wordworth 3.0 to 3.0a. Will it make the grade? All this and more!

CU AMIGA July 1994. Coming to a shop near you. Don't miss it!

CAN YOU BELIEVE THE HYPE?

After years of experimentation CD technology is about to take off, with four major players on the console starting blocks. But, with the industry's past track record in delivering the goods on time, Steve Keen asks if it will ever become a reality.

Oh yes, the future is almost here! (to coin a certain lower-selling magazine's phrase). Remember CDTV? How can you forget it. That sleek black box was touted by Commodore as being the future of game technology and, to a small extent, Commodore was right. I still use mine to check out the latest PD disk and play the odd audio CD. Over the last few years Commodore has passed eight different pieces of hardware under our noses; only to have them discontinued or replaced, often as little as six months after initial release. So what sort of future can we expect for its newest marvel, the CD32?

BACK IN TIME

Although the CD32 was released nine months ago it's only at this stage that quality games are finally beginning to trickle through. Liberation has won over many, but with the announcement of the new £249 Spectacular Voyage Pack, including six games of Chaos Engine, Wing Commander and MicroProse quality, things are looking better. What's taken so long to program games that really show off the machine's capabilities though? Well, it takes any new machine time to establish itself and for programmers to get used to the hardware. However, since the CD32 is basically enhanced Amiga technology with a CD drive strapped on, this is not much of an excuse (although trying to fill up 650Mb might well).

UP TO SPEED

However, the market is rapidly changing, and more companies than ever are poised to pounce on the high street punter with their own, alluring, all dancing machines.

3DO, the much hyped company set up by former Electronic Arts big wigs, The Huwkins, has been pushing its latest technology, licensed by Sony and Panasonic, hard. Early last year 3DO promised lemistic quality graphics and gamesplay on a CD based machine due for UK release in April this year. But that date has already slipped twice, first to May and now to September. Even worse than that, rumours of machines released before Christmas in America suggest that the soft ware keeps crashing due to problems with the CD drive. In the UK computer trade paper, CTW 3DO admitted to being "overambitious".

Japanese giants Sega didn't escape being tarnished with the over hype brush either. Now poised to reach new heights of hype with its future console, the Saturn, and wonder add-on this March, it wasn't too many moons ago that Sega was pushing the rather less than awesome Mega CD. Supposed to revolutionise games playing, the Mega CD has far from delivered the goods. Initially claimed to have a maximum disc accessing time of 0.5 seconds, the last game I checked out it sported gaps of more than half a minute between play! And does anyone remember the Sega home virtual reality unit? No? Well that's because it never materialised! Least said the better.

As for Nintendo, its new machine hardly exists on paper, let alone as a concrete development. The optimistically titled Project Reality couldn't be much further from fruition. It's a long term project between Nintendo and Silicon Graphics, the computer graphics and film specialists behind

such hits as Terminator 2. Nintendo have been raving about Project Reality to the press for months, but so far nothing more than a short demo has appeared and that's only on Silicon Graphics' £250,000 development machine, the Cray Reality Engine 2. Rumour has it that the Project Reality machine itself won't see the light of day for another two years.

Maybe this will be the year that Commodore's arch nemesis, Atari, will break back into the home console market. Not so long ago Atari single-handedly ruled the home market with its phenomenally successful VCS2600 console and having lied its hand at the hype market before, this time it's gone for a more reserved approach with the 64-bit Jaguar console. Instead of trying to blind punters with buzz words and fantastic claims of performance Alan have been attempting to wow programmers and software publishers first. This approach seems to have paid off because out of all the new systems due for release, people in the know are tipping the Jaguar most likely to succeed. However, even though launch is only two months away, there are only a handful of games even remotely close to completion, and several of these are still red sheet proof-ups and conversations. To make matters worse the CD add-on for the console has been cruelly dubbed "the toilet" by the industry due to its resemblance to an Armitage Shanks flip top model. Hardly a prizewinning

BIG BOYS' TOYS

Out of all the new machines that will emerge over the coming year only one's really caught everyone's imagination - Sony's PS-X. This CD based phenomenon has caused a stir throughout the industry, with tales and screen shots of better than arcade-quality graphics and coin-op perfect conversions of multi-thousand pound machines, such as Daytona Racing. However, all these wonders are still months or years away and launch dates can prove notoriously slippery.

So what of Commodore, after with its CD32? Well, for a start it's here now! And with the new value pack, it hardly costs an arm and a leg. Software support is strong too; there are over 80 games already available for the machine. But most of all, the CD32 has a new FMV cartridge, allowing movies and the like to be played from compact disks. Every one of the 6000 advanced units has already been sold!

CD32 is still in there and you can be sure that

Commodore are

not going to give up on this one

Hardware manufacturers, type

machines will continue to come

and go, Commodore's, no

doubt, included. There's always

something better on the horizon

But it's important to remember that some horizons are closer than others - at least with Commodore and the CD32 it's not something over the rainbow.

Steve Keen is a journalist and commentator who writes regularly for computer and leisure publications. He is also a regular contributor to the magazine.

CG Amiga would like to stress that opinions voiced on this page do not necessarily reflect those of the magazine.

VIDI

Rarely will you find a device so highly acclaimed as the Vidi series. A range of products designed to suit both your budget and requirement.

To Offer you complete peace of mind, each and every model is upgradable to the next. So if you move towards a more professional application, your digitiser can progress with you.

No longer are you forced with an out of date product that doesn't fulfill your needs. Its all very well me blowing my trumpet, but do the journalists think of the Vidi Range ?

After purchase we welcome your comments, its our policy to listen.

In fact the Vidi range was designed by user feedback.

Stephen Barthgate
Managing Director

What the press said...

Mat Brofield CU... Value for Money, "no other digitiser comes close."

"At £199 I think that Vidi 12 RT is the cheapest real-time 24-bit digitiser in the world, it's the only one for Amiga that doesn't need a big box machine such as the A1500 or 3000."

Alan Puzey AMIGA USER INT... "What can I say? Between £200 and £300 for an encoder 24-bit real time frame grabber that you can slip in your pocket and take anywhere, it's guaranteed to break the ice at parties when you slip it out and extoll its virtues."

Mat... "Sorry Robbie, but I'm not going to give it more than 90%... I gave the VidiAmigo 12, where would your incentive to produce yet a better machine go then?"

The VidiAmigo is one of the greatest graphics products to appear on your favourite computer. It's obviously going to be one of the really top Amiga products of 1994."

JAMES CARR

The Vidi Range

Vidi Amigo 12 is our entry level digitiser. Perfect for someone who's getting involved in video capture for the first time. This model captures mono pictures in real-time, colour in less than a second.

Software includes an Animation Workstation and powerful Image Processing grabs pictures in 4096 colours and 16 greyscales. Comprehensive file support includes BMP, TIFF, IFF, AMIGA etc. Fully compatible with all Amiga's.

£99.95

Vidi Amigo 12RT is the perfect Multimedia video tool for A1200 users. Offering real-time colour image capture in all Amiga modes including 24-bit.

Fully compatible with all Amigo's, 2 meg or above. Images can be grabbed in 16.7 million colours or 256 greyscales from any video source (TV, Video, Satellite etc.) Connect Vidi to your computer and you have one of the most powerful scanning devices available.

£199

Vidi Amigo 24RT is our most powerful real-time digitiser. Producing SHR (Super High Resolution) true colour images at beyond broadcast quality. Designed for the normal user, but offering truly professional results. For the person who wishes to push his Amigo to it's MAX !

It will capture your imagination, bringing photorealistic images to your screen. Suitable for any image related multimedia, picture scanning application. Although this model is compatible with all Amigo's it is best used on AGA machines or Amiga's fitted with true colour display cards. Most of this advert has been produced using Vidi Amigo 24RT so throw away your scanner !
